

Design Thinking and Advanced Prototyping

ELEC-C9821 – Framing and Idea Screening

Aalto University
School of Electrical
Engineering

Salu Ylirisku

8.2.2023

Today's agenda

09:15 - 10 Lecture

1. Foundations of identifying good ideas
2. Defining learning goals and requirements for prototypes

10:15 - 12 Workshop

3. Teamwork: Present your three ideas
4. Discussion

Learning goals

- Learn the criteria for the early screening of ideas in order to find the best ones
- Learn to set your learning goals for your first prototype

How do I recognize a good idea

It is about judgment:

How can you judge an idea?

What enables you to say that an idea is ‘good’?

What does it even mean that an idea is ‘good’?

Varieties of Goodness

Utilitarian goodness	- Getting something done
Instrumental goodness	- Getting something done well
Medical goodness	- Being safe and healthy
Hedonic goodness	- Feeling good
Technical goodness	- Performing well
Good of man	- Wellbeing and happiness

Goodness	Relative to	Context	What is ‘good’
Utilitarian	Desired end of action	Task	Useful (yes/no)
Instrumental	Desired end of action	Task	Serving well
Technical	Requirements, competition	Activity	Excelling
Medical	Health, normalcy	Activity	Beneficial, not harmful
Hedonic	Pleasure, pain	Experience	Pleasure
Good of Human	Welfare	Life	Happiness and wellbeing

Table 1. Summary of the varieties of goodness.

Images of utilitarian goodness

Starting a car with a potato

<https://www.mirror.co.uk/news/weird-news/aa-mechanic-fixes-car-potato-5193266>

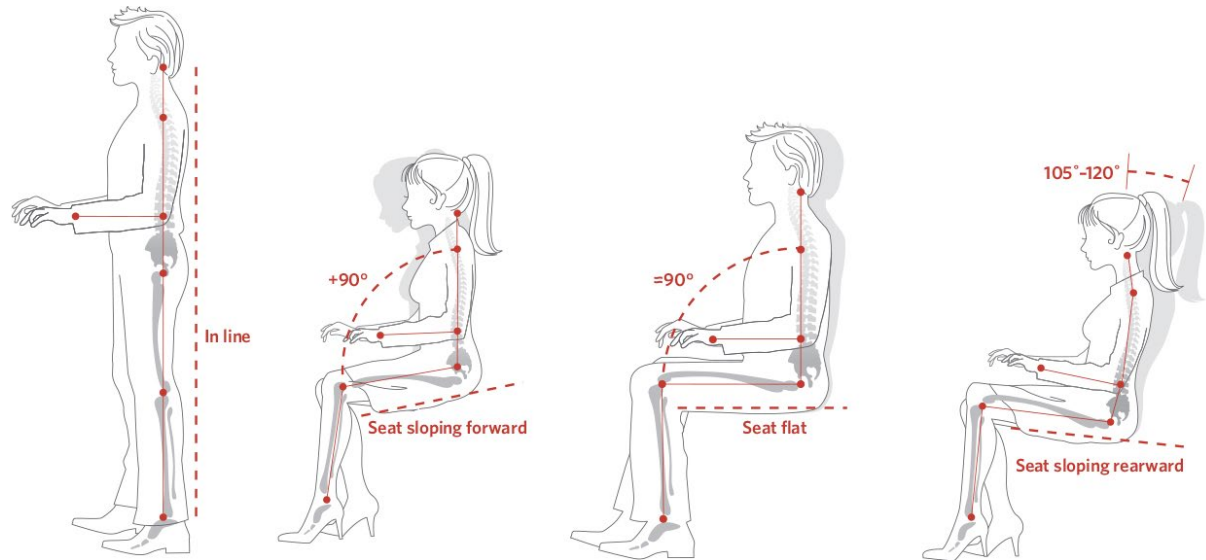

Images of instrumental goodness

Evolution of the hammer

Images of medical goodness

Adjustable Sit Stand Desks

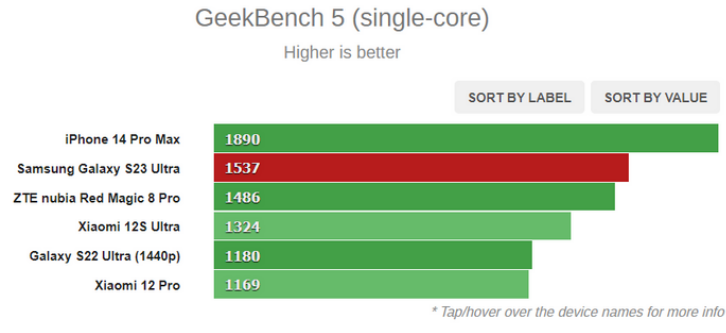

Images of hedonic goodness

Varieties of coffees

Images of technical goodness

Domain-specific performance

EVGA INTERNATIONAL CO.,LTD Default string

Single-Core Score	Multi-Core Score
5773	24260

Geekbench 4.1.1 for Windows x86 (64-bit)

Result Information

Upload Date	September 08 2017 08:43 AM
Views	3090

System Information

EVGA INTERNATIONAL CO.,LTD Default string	
Operating System	Microsoft Windows 10 Pro (64-bit)
Model	EVGA INTERNATIONAL CO.,LTD Default string
Processor	Intel Core i7-8700K @ 3.70 GHz 1 processor, 6 cores, 12 threads
Processor ID	GenuineIntel Family 6 Model 158 Stepping 10
Processor Codename	Coffee Lake
Processor Package	Socket 1151 LGA
L1 Instruction Cache	32 KB x 6
L1 Data Cache	32 KB x 6
L2 Cache	256 KB x 6
L3 Cache	12288 KB
Motherboard	EVGA INTERNATIONAL CO.,LTD 121-KS-E375
Northbridge	Intel Coffee Lake 07
Southbridge	Intel Z370 00
BIOS	American Megatrends Inc. 0.01
Memory	16342 MB 1200MHz

Single-Core Performance

Single-Core Score	5773
Crypto Score	5169
Integer Score	6015
Floating Point Score	5710
Memory Score	5473

Images of the good of man

What truly matters

- Think further and wider

Varieties of Goodness in Design

Utilitarian goodness

Instrumental goodness

Medical goodness

Hedonic goodness

Technical goodness

Good of human

Conceptual Design

Usability Design

Ergonomics Design

Experience Design

Engineering Design

Sustainability Design

Foundations of Judgment

1. Perception

- You must somehow be able to perceive (see, conceive) the design object
- You can only perceive what you are sensitive to
- You can cultivate your response-sensitivities

Foundations of Judgment

2. Valuation

- **Valuation begins with your own emotional response to what you perceive, i.e., I like this, I feel this is ugly, ...**
 - Cultivated judgment goes beyond your own emotions
- **Valuation is about relating**
 - A) the design object in to various contexts, and
 - B) the contexts embody different requirements.

**How do you create something you
can reasonably expect to be good?**

Creations are based on imagination

What is imagination?

- It is not something only in your head.
- Imagination is about generating ‘images,’ testing these, and filtering out those that work for you
- I use the term ‘image’ in its broadest sense, as an idea

Articulation

- You need to have the ‘resources’ that enable you to articulate something that you may reasonably expect to be good
- These ‘resources’ are partly comprised of contextual knowledge (user knowledge, technology knowledge, ..) and partly of your capabilities to express ideas in a way that sticks
- You need to study in order *learn* and create these resources

Sharing an idea

- **Before you can expect someone else to ‘get your idea’ you must articulate it, i.e. giving it a perceptible form**
 - Verbal
 - Textual
 - Visual
 - Sketchy
 - Photographic
 - Diagrammatic
 - Physical

Image vs Story

Image

Cybertruck

BETTER UTILITY THAN A TRUCK WITH MORE
PERFORMANCE THAN A SPORTS CAR

Story

Nokia's tiny phone

Design Concepts

- **What makes this concept this?**
- **What is the valuable & significant difference that this makes in relation to other concepts?**
- **You should be able to state this in terms that matter to**
 - users
 - managers
 - developers
 - investors

We shall get back to this today

Towards Prototyping

Requirements definition

Learning goals

Storyboard example revisited

Deriving the key requirements for a prototype

Prototype is not prototype unless..

You test it!

What does a test mean?

In a well-thought manner, it should be as follows:

1. Define what do you want to learn with this prototype
2. Define the requirements for the prototype
3. Build the prototype
4. Test the prototype
5. Express what did you learn with this prototype
6. Reflect and iterate

Learning goals - Example

What do I want to learn with this prototype?

- **Utilitarian qualities?**
- **Interactive qualities?**
- **Physical qualities?**
- **Perceptual, identity, and brand qualities?**
- **Technical qualities? Manufacturing qualities?**
- **Sustainable qualities? Ethical qualities? Life-value qualities?**

The prior learning goals are the big ones

Yours are closer to the storyboard example from the last week

Example – Remote Temp Sensing

The owner of a summer cabin at a lake, Petra, wants to know how cold the water is at her summer cabin.

She has a wireless thermometer attached to her dock that measures water temperature.

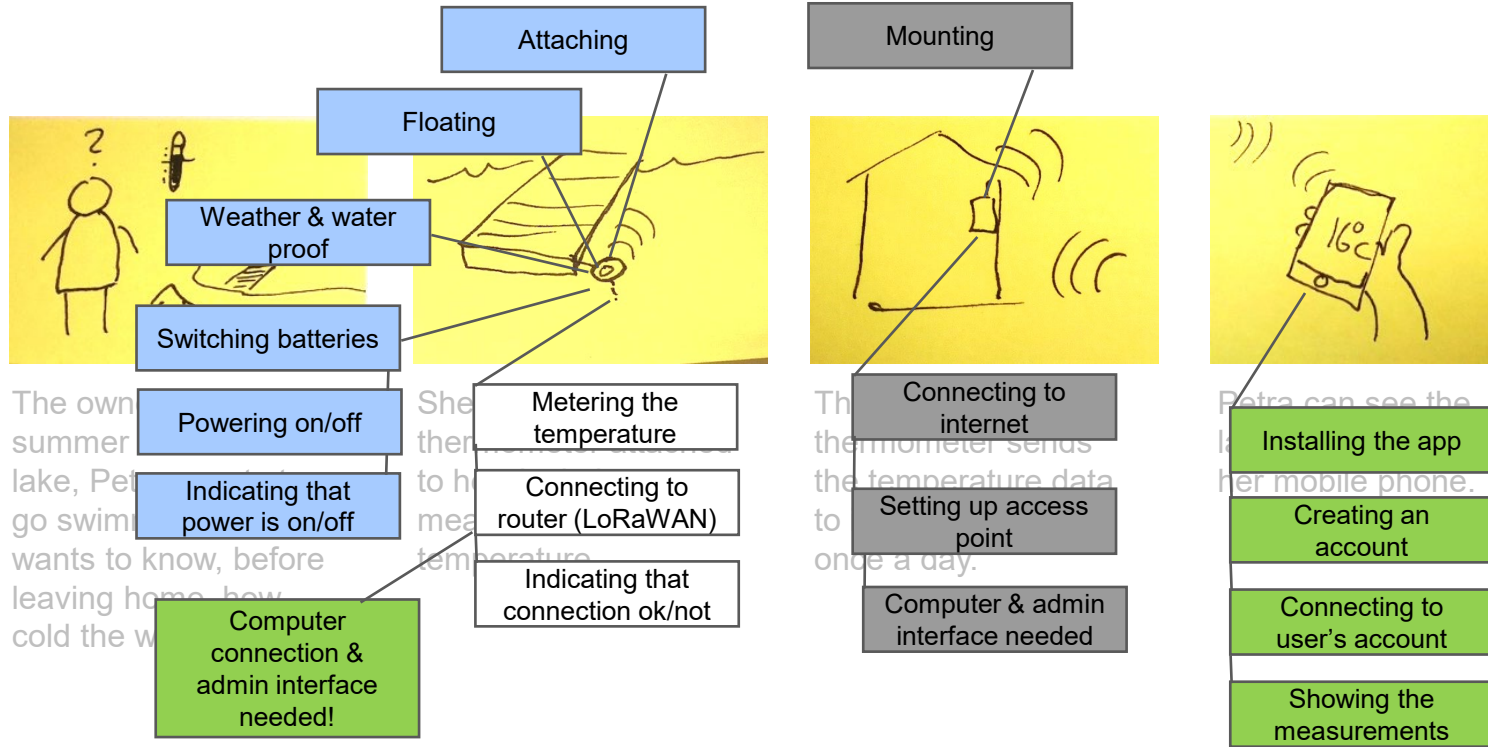

The wireless thermometer sends the temperature data to internet service once a day.

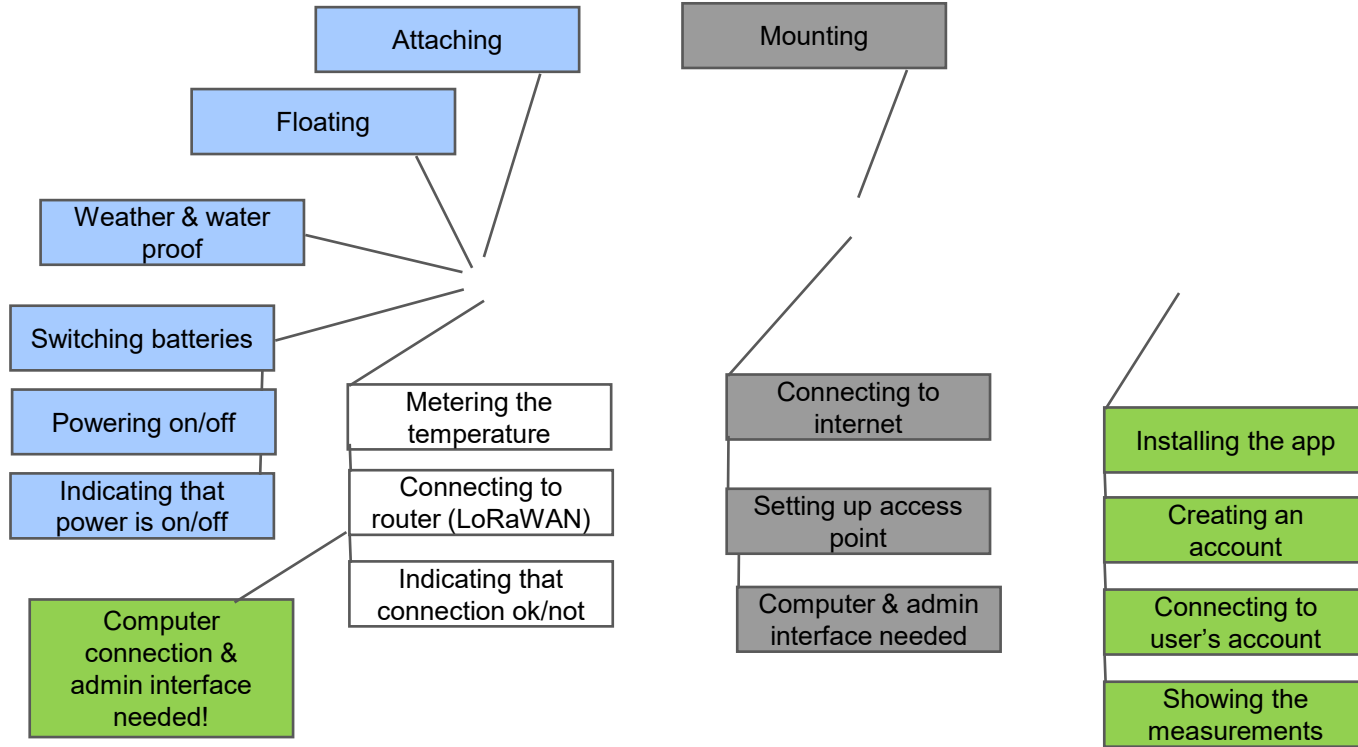

Petra can see the lake temperature on her mobile phone.

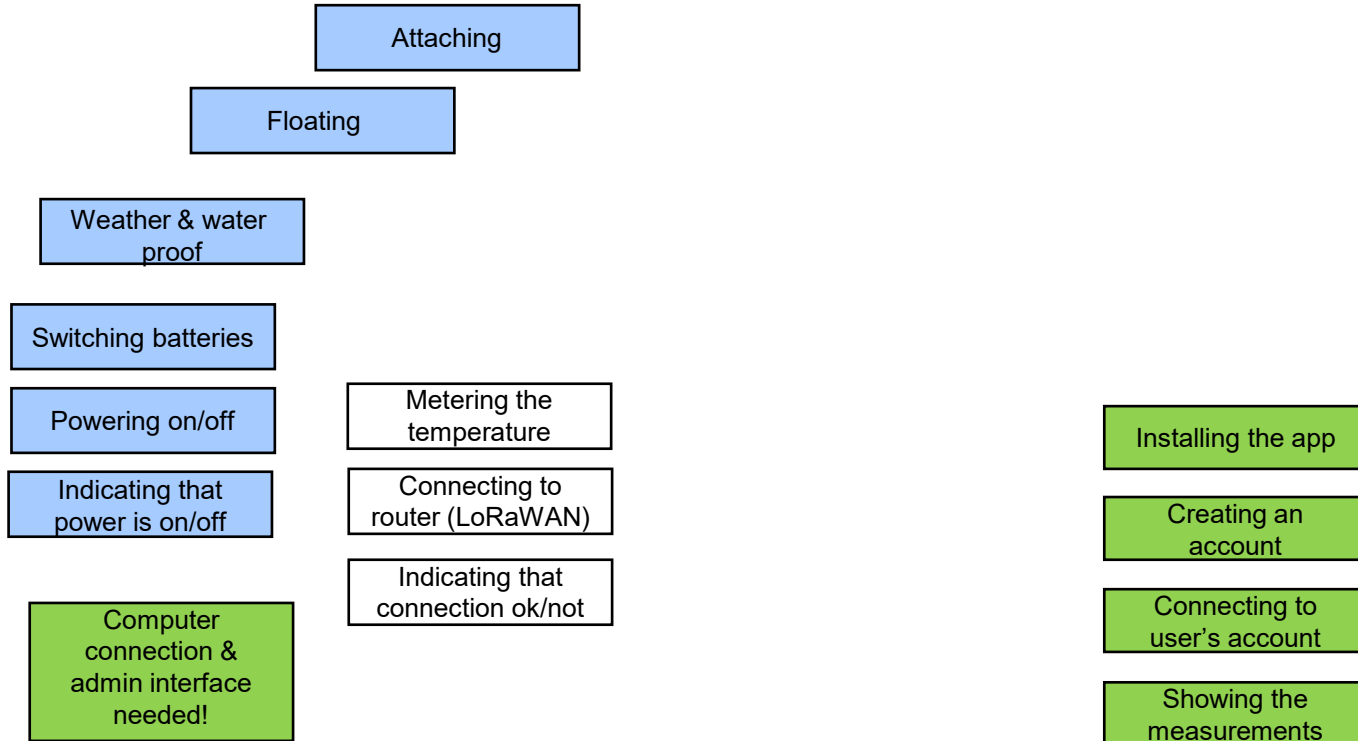

What functionalities/features?

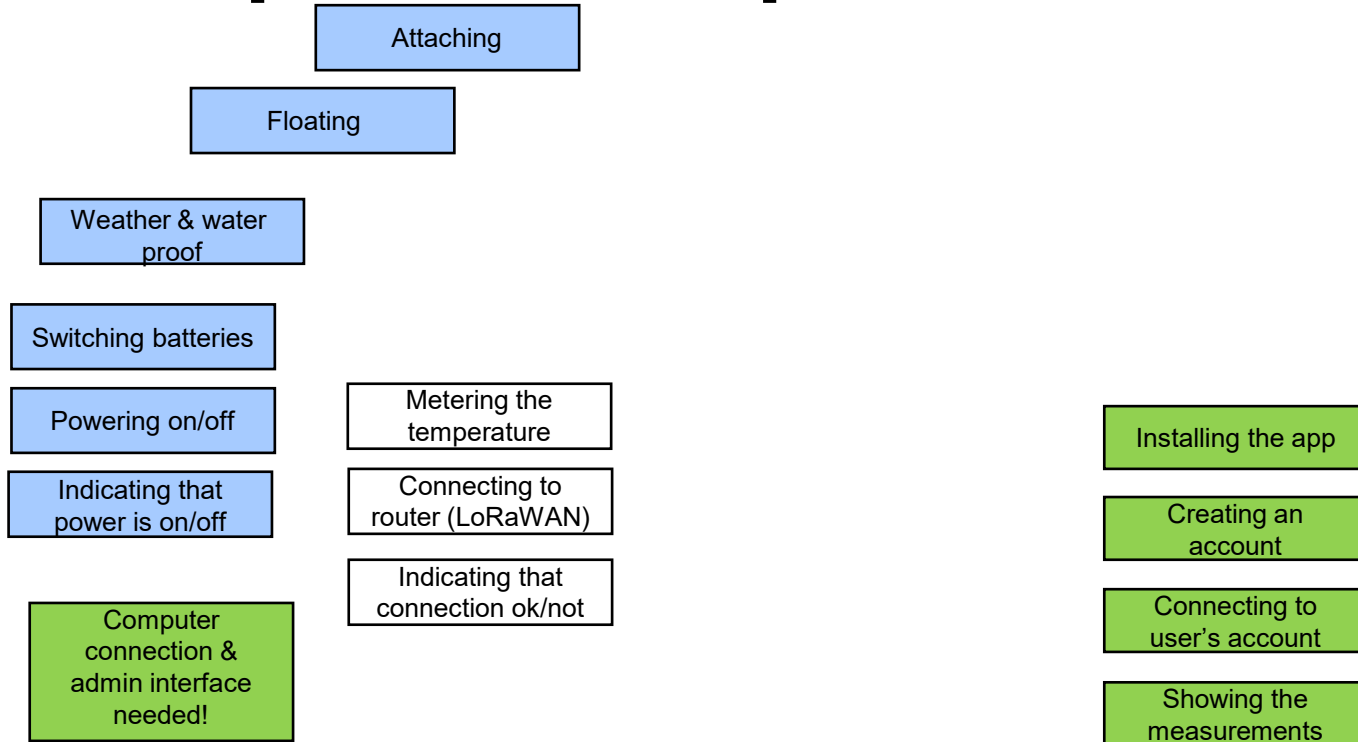

What functionalities/features?

What functionalities/features?

What is important for proto V1?

What is important for proto V1?

Essential in V1 proto

Powering on/off

Metering the temperature

Connecting to router (LoRaWAN)

Indicating that connection ok/not

Sending the data

Cloud service that receives the data

Later or in parallel

Physical design

Attaching

Floating

Weather & water proof

Switching batteries

Indicating that power is on/off

App Design

Installing the app

Creating an account

Connecting to user's account

Showing the measurements

Device Admin interface

Computer connection & admin interface needed!

Learning goals?

G1: Learn to send the temp readings to a Cloud Service via a LoRaWAN connection

Essential in V1 proto

Powering on/off

Metering the
temperature

Connecting to
router (LoRaWAN)

Indicating that
connection ok/not

Sending the data

Cloud service that
receives the data

Requirements (Proto V1)

R1: The device must read temperature correctly

R2: The device must connect to a LoRaWAN router

R3: The device must show the status of the connection

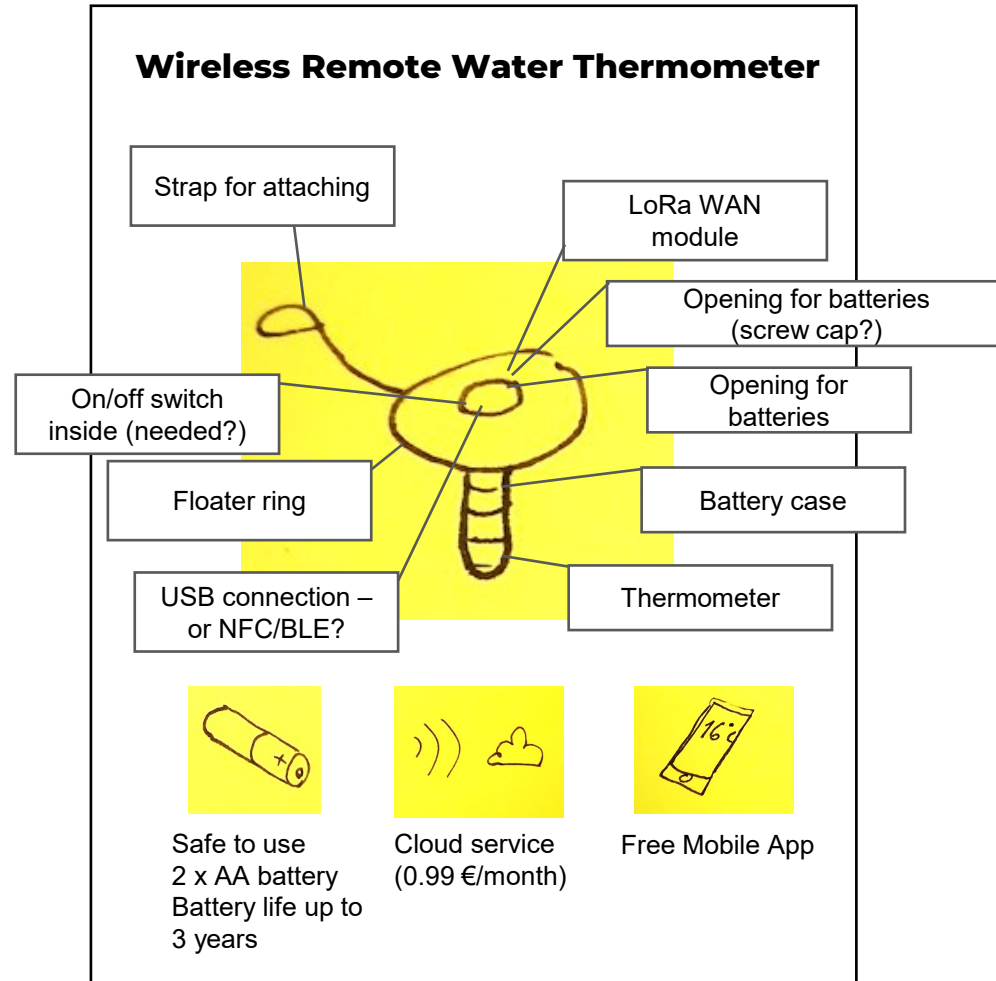

R4: The device must connect to an online web service that can show the temperature readings on a web browser

Poster

Poster

-- Presence Check --

Workshop:

Create a presentation for your 3 ideas

Present your 3 ideas

- **What is the value of your design idea?**
 - Explain this as simply and accurately as possible
- **What are the essential parts of the idea?**
- **Why is IoT the right technology for the purpose?**

Circuit Shop Schedule

We have a scheduler on MyCourses to help you to distribute across the week so that the small space does not get too full.

Circuit Shop (piiripaja) is located in front of the Electronics Workshop (Sähköpaja).

Available times are during the regular exercise times (may be adjusted if needed)

This week

- **Project: Focus on one idea – presentations next week**
- **Write your weekly diary and submit it (the periodical diary is due on Fri 17th)**
- **Exercises (Fri 14-16, Mon 14-16, Tue 10-12)**
 - There are **REQUIRED** – and you need to reflect on them in your diaries
