

What makes a better city?

Housing, Industrial development, better streets and highways – improving all those things make for better cities. ¹

When we talk about cities, every problem is a collective problem.

1. New York planning manual for 1960s renewal projects

Making better cities

Urban planning ideologies

In planning theory the shift from expert-led to citizen-driven ideals was less evident.

A new planning paradigms didn't replace the old one but stacked.

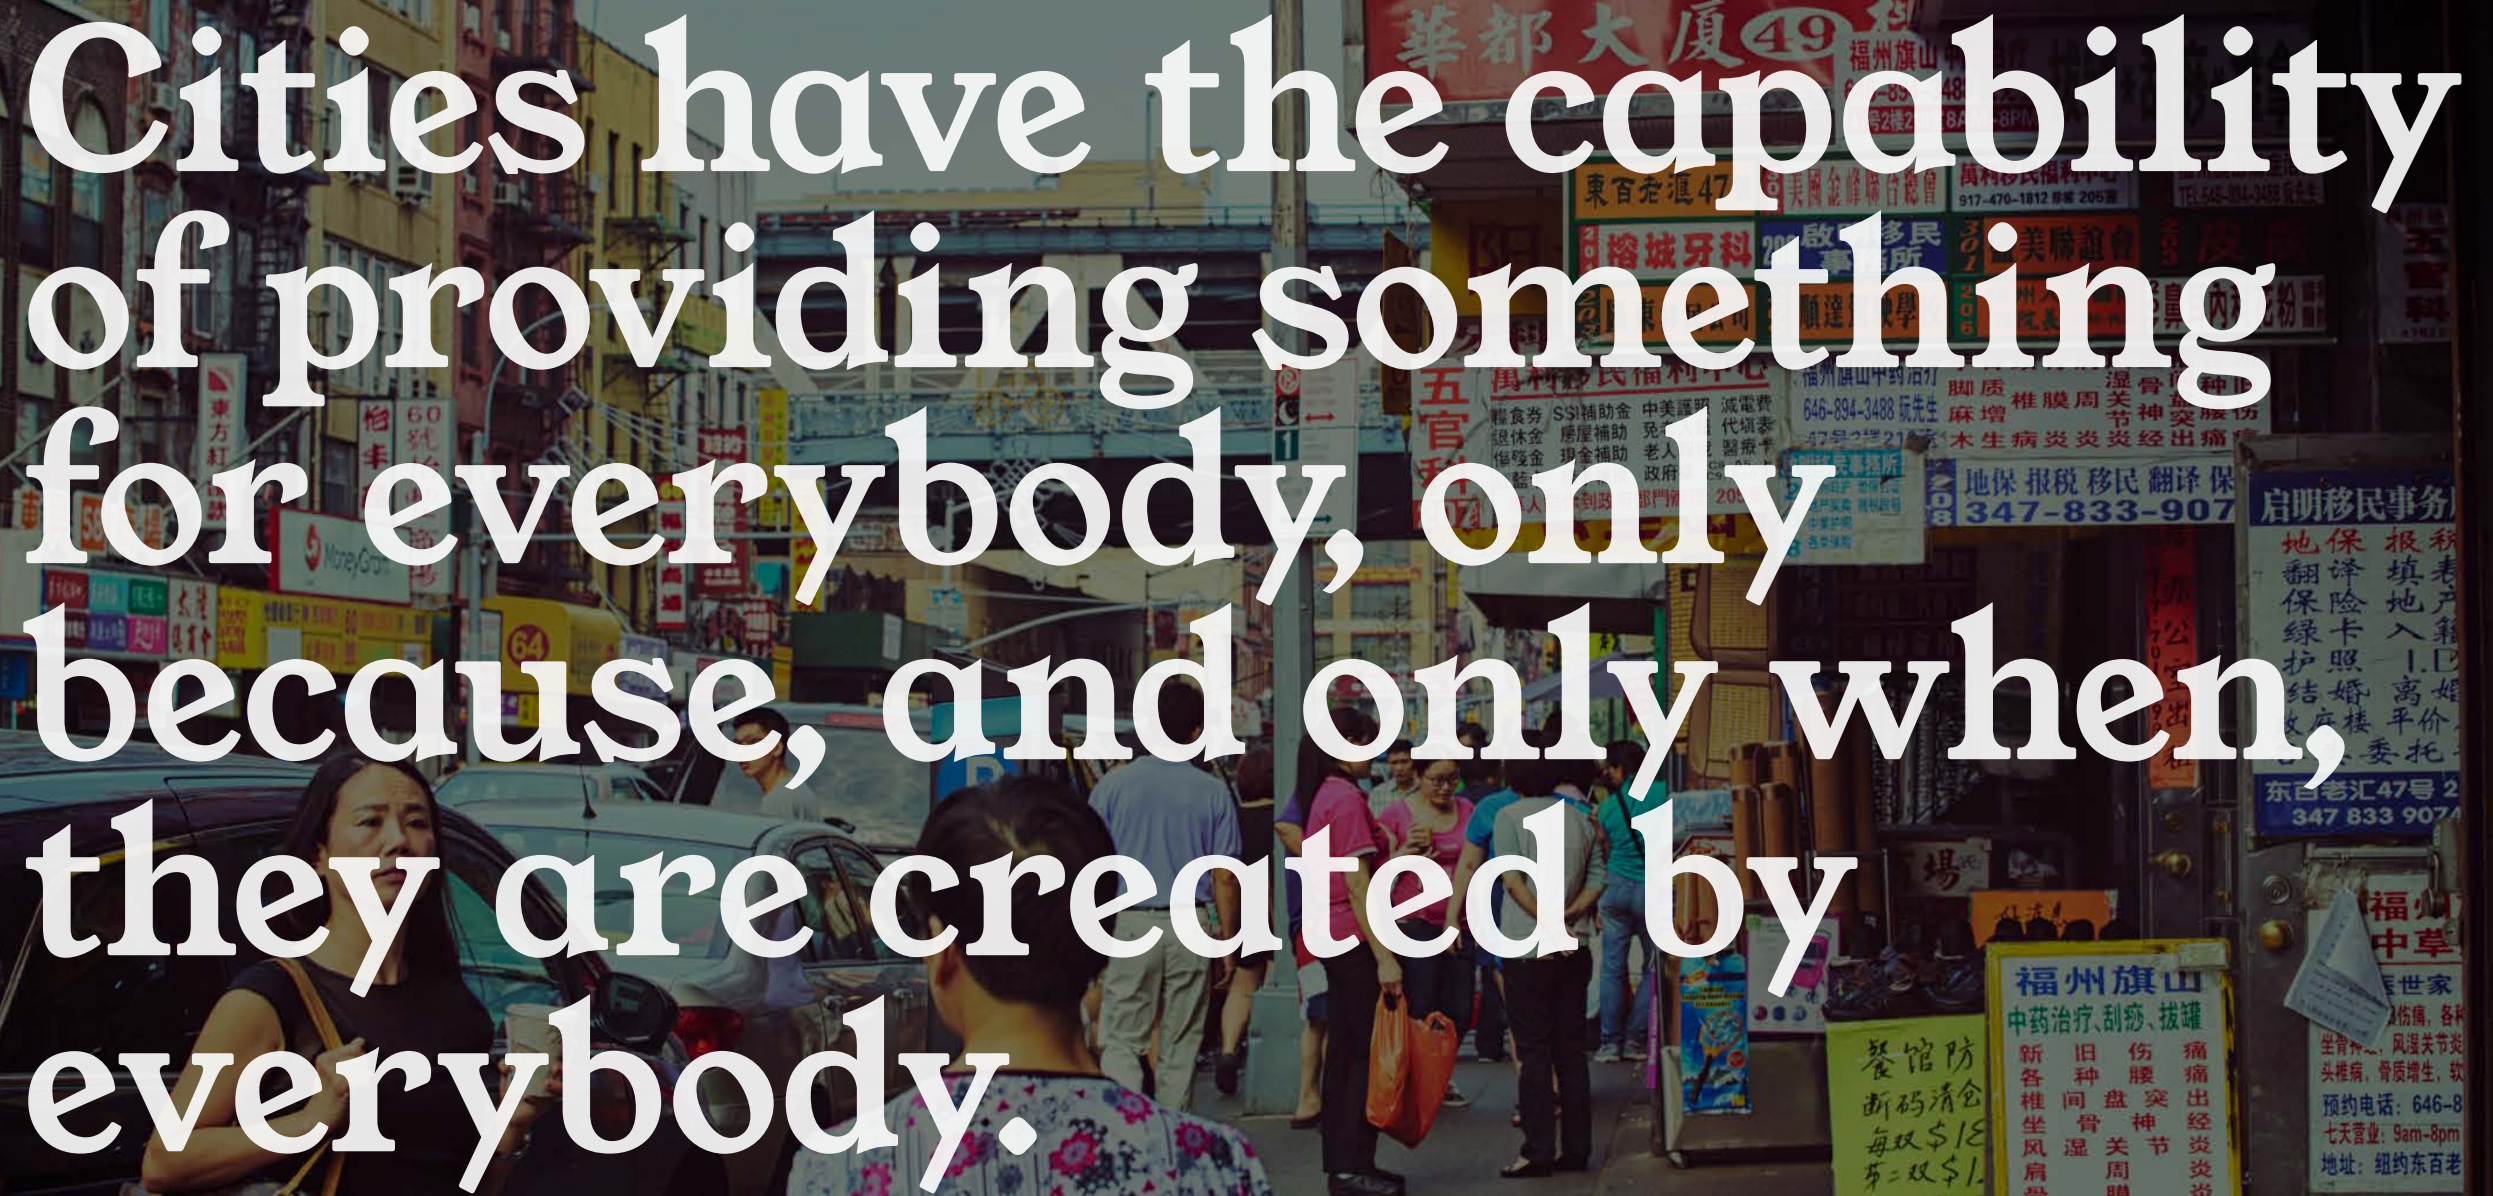

Even today, expert-led, top-down models thrive.

Expert-led planning

| Name | Emergence |
|--------------------|-----------|
| Garden city | 1900s |
| Neighbourhood unit | 1920s |
| Radian city | 1920s |
| Boadacre city | 1930s |
| Urban Renewal | 1940s |

Citizen-driven ideal

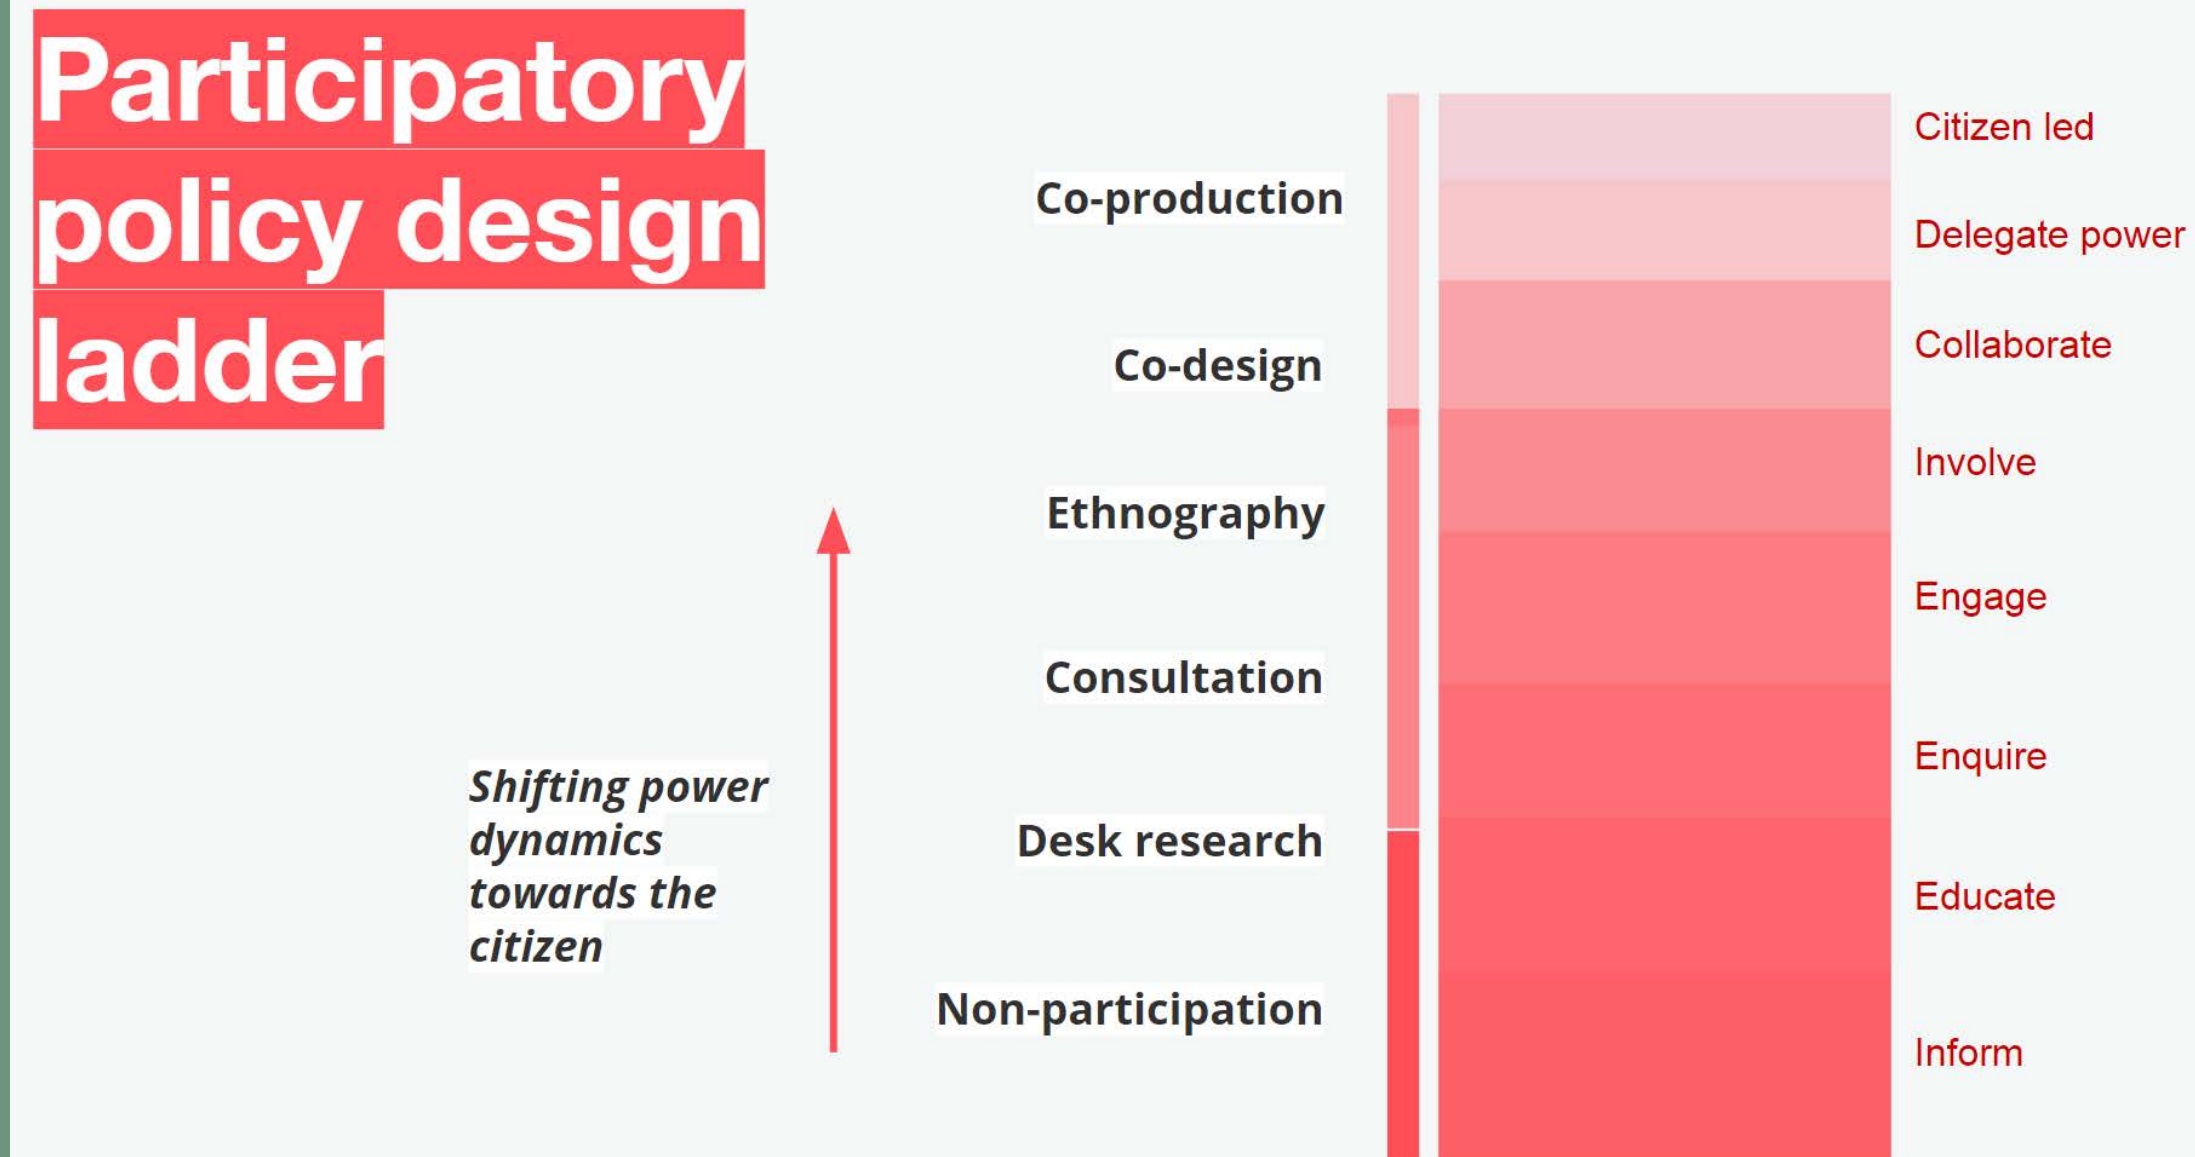

| Name | Emergence |
|-------------------------|-----------|
| Community action | 1960s |
| Advocacy planning | 1960s |
| Equity planning | 1970s |
| Traditional neigh. dev. | 1980s |
| Transit-Oriented dev. | 1990s |
| New Urbanism | 1990s |
| Smart growth | 1990s |
| Eco cities | 1980s |
| Eco-towns | 2000s |
| Creative districts | 2000s |
| Living labs | 2010s |
| 15min city | 2020s |

Cities have the capability
of providing something
for everybody, only
because, and only when,
they are created by
everybody.

Jane Jacobs 1961

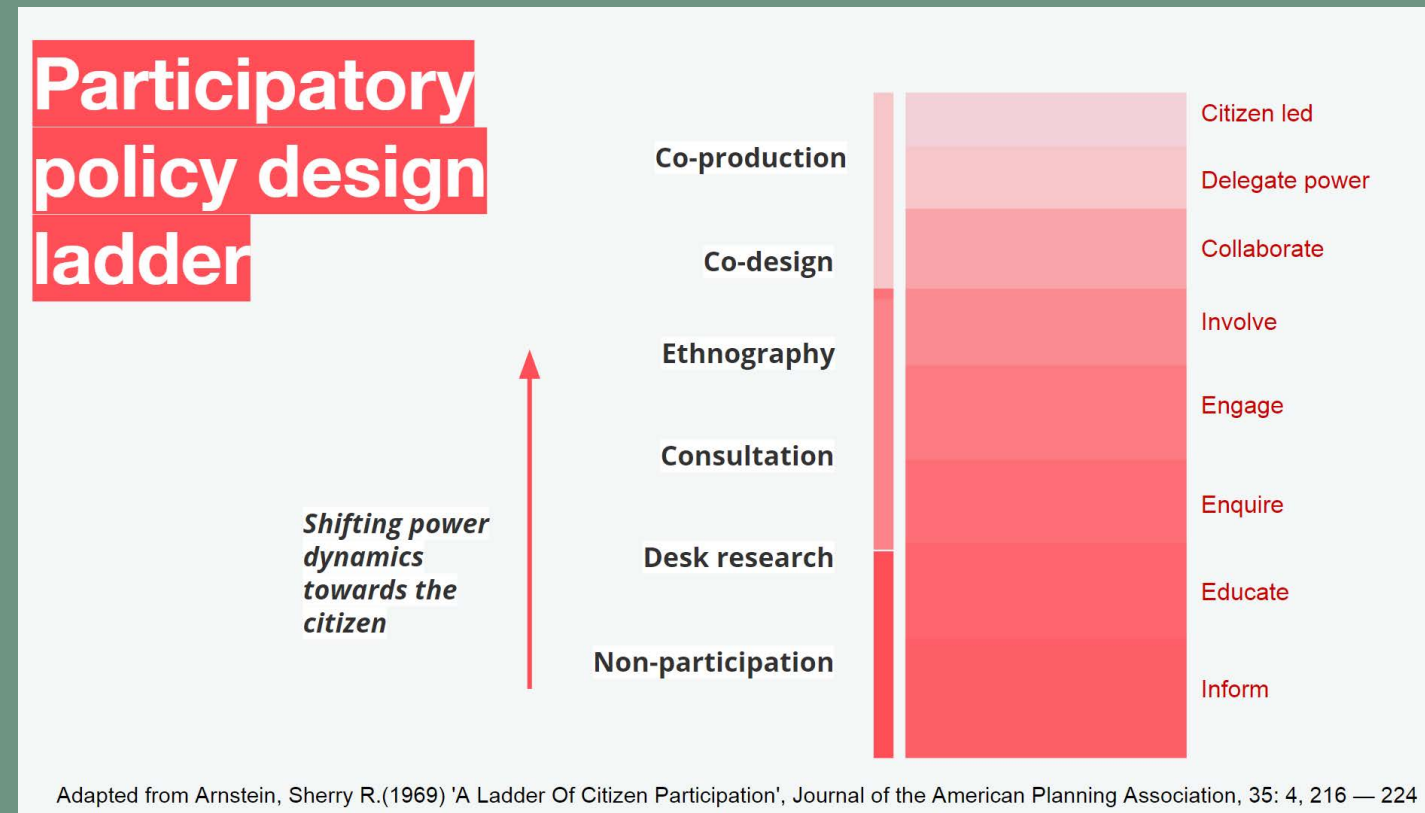

Making cities better by climbing the latter of participatory design.

Consultation

Participation was introduced as a solution to relink urban planning to social change and democratise the urban planning process in cities and regions.

With the advent of PPGIS participation became from a niche to a globally embraced practice.

Narva noorte taju-kaart

Koondkaart annab ülevaate noorte jaoks meeldivatest (roheline) ja ebameeldivatest (punane) kohtadest ning piirkondadest. Kohad, kus erinevad hinnangud kattuvad on tähistatud kahte värvi kombineeriva pruuni tooniga.

Eraldi on välja toodud Narva noorte kõige olulisemad maamärgid, mis said positiivseid või negatiivseid hinnanguid.

2000 aastal koostatud taju-uuringu võrdlemisel 2020 uuringuga võib järeldada, et jõeäärse kallasraja korrastamine on piirkonna populaarsust veelgi kasvatanud. Jätkuvalt on populaarne vanalinn ja Peetri platsi ümbrus.

Kultuurikeskus Geneva ja lähiumbruse meeldivus on vähenenud, esile on tõusnud Astri ja Fama keskused.

Osa linnast, mis paikneb Tallinna maanteest põhja pool on muutunud oluliselt meeldivamaks, Soldino ja Kerese piirkonna atraktiivsus on vähenenud. Kreenholmi piirkonna meeldivus on tuntavalt vähenenud, eelkõige on ebameeldivad Kreenholmi kooli ja Gerassimovi kultuurimaja ümbrus. Atraktiivsemaks peetakse vaid Kreenholmi lääneosa (staadion ja ümbrus).

ebameeldiv

meeldiv

meeldiv/ebameeldiv

Astri keskus ja lähiumbrus

Nii meeldiva kui ebameeldivana märgitud koht, kus kogunetakse sõpradega, aga kus käiakse ka perega või üksi.

meeldiv/ebameeldiv

Fama keskus

Nii meeldiva kui ebameeldivana märgitud koht, kus käiakse nii üksi kui ka koos sõpradega.

meeldiv

Narva vanalinn

Vanalinna piirkonnana tajutakse meeldivana, kuid kohtadena tõstatatakse esile vaid raekoda ja kolledžid.

meeldiv

Narva linnasüda

Positiivseid hinnanguid jagub nii Hermannilinnusele, lossipargile kui Puškini alleele, ebameeldivana tajutakse Tallinna mnt ringristmikku.

meeldiv

Jõeepromenaad

Noorte jaoks meeldiv piirkond, mis ulatub Narva sadamast Joaoruni välja.

meeldiv

Joaorg

Rannaala on noorte jaoks atraktiivne piirkond, samuti hindavad noored rannahoone moodsat arhitektuuri.

meeldiv

Kreenholmi staadion ja jäähall

ebameeldiv

Gerassimovi klubihoone

ebameeldiv

Ethnography

Participatory policy design ladder

*Shifting power
dynamics
towards the
citizen*

Adapted from Arnstein, Sherry R.(1969) 'A Ladder Of Citizen Participation', Journal of the American Planning Association, 35: 4, 216 — 224

Digital Ethnography

The study of the explicit signs and traces of the human experiences embedded in digital media – left by a large number of people.

- People interacting with the city
- People interacting with each other

Cultural analytics

An aerial photograph of a city, likely London, with a heatmap overlay. The heatmap uses a color gradient from blue to red to represent data density. The red areas are concentrated in the central business district and other urban centers, while blue areas are more prevalent in the surrounding suburban and rural areas. The map shows a clear grid pattern of streets and a winding river.

Studying the humanities
with massive digitised
visual materials and
contemporary crowd-
generated visual artefacts

Avoid reductive
summarization typical of
quantitative research.

Why photography

- The map is (almost) the territory
- Every photo is always taken from the human perspective
- The “Social photo” is the only representation of cities that included the human perspective, both the visual and the emotional ones.¹

1. Nathan Jurgenson, 2019.

Why photography

- In photos emerge interpersonal behaviour and political realities.
- Historically located and socially situated
- Using a large sample of socially shared images provide a (less biased) version of the collective experience in cities.

ETHNOGRAPHY FOR A DATA-SATURATED WORLD

EDITED BY

- Health

Hubs are classified either as 'mobility' or 'social hubs' according to the most recurrent activity.

Mobility hub Social hub

Relatively easy to perform

A manual for Helsinki civil servants ¹

Cultural analytics can be carried out relatively easily by non-specialists.

Often no special equipment or skills are needed

Quantitative cultural analytics can be performed with open source software

The image shows two pages from a manual titled "POSITIVE DEVIANCE".

Top Page: POSITIVE DEVIANCE Method

- CULTURE:** Recognising unexpected or unintended uses that contribute to the livelihood of a public space. Includes icons of a smiley face and a hand holding a heart.
- ABOUT:** Positive deviance maps spontaneous appropriations of public space (such as play, sports, dancing, etc.). If those behaviors encourage social curiosity and cohesion, they make small public space thrive and can maximise community values over market values. A secondary note states: "Positive deviance finds emerging behaviors and activities that contribute to the livelihood of public spaces. Those can be used to support new initiatives or inspire new temporary or permanent uses, eventually building a sense of community among city residents."
- Images:** Two photographs showing public spaces with people. One shows a person sitting on a bench, the other shows a person standing near a table.
- Caption:** "An example of data formats to detect sociality in Social Networks."
- Page Info:** 2022 SEP, P.29, WW logo.

Bottom Page: POSITIVE DEVIANCE Deployment

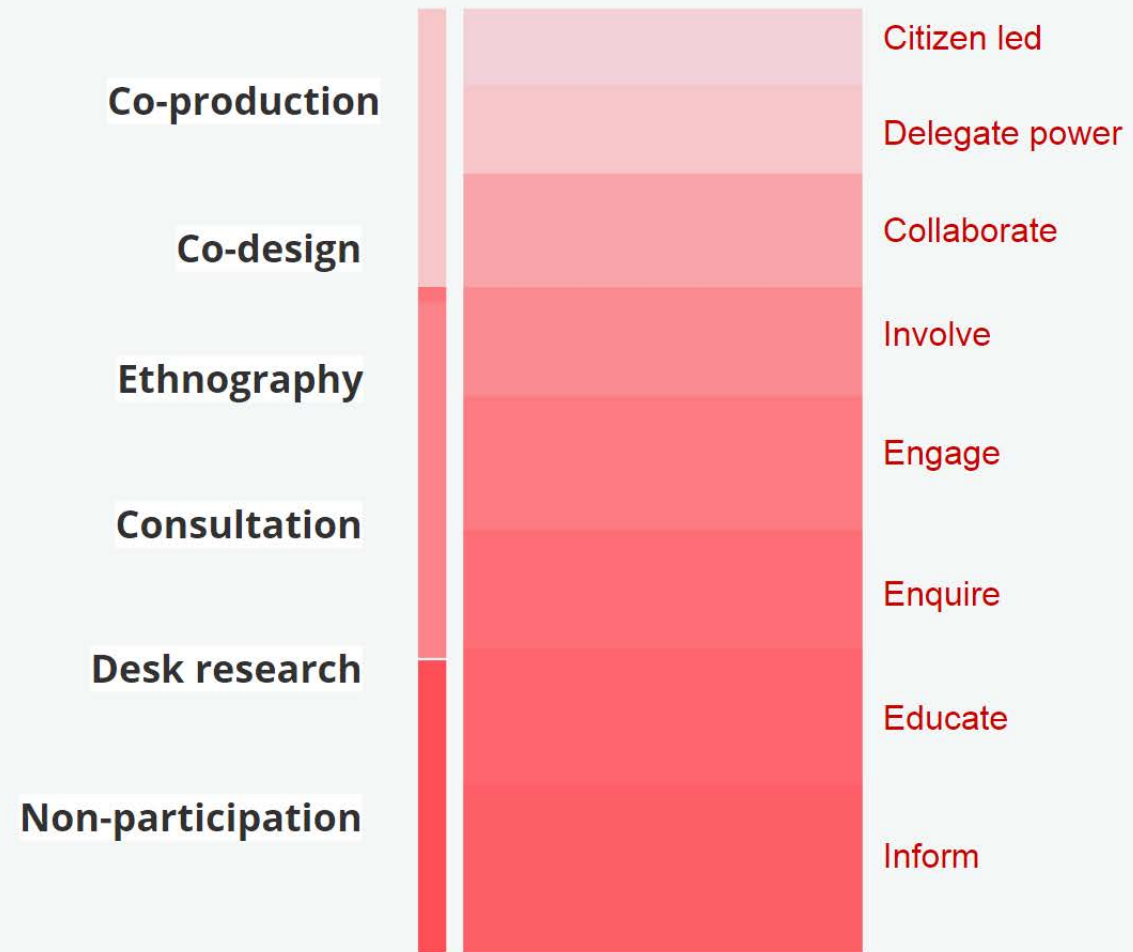

- Digital:** Survey pictures from social networks considering potential locations and hashtags that represent the place. Instagram and Facebook are recommended for this purpose. Browse the images to find unintended uses and activities that encourage social curiosity and cohesion. Gather the observation in an excel table to analyse trend and visualise the data. Includes a progress indicator for Expertise, Workload, and Requirements.
- On Site:** Survey the public space to find unintended uses and activities that encourage social curiosity and cohesion. Gather the type of activities such as sport, art, temporary use etc. and keep a tally of the number of people it attracted. For example if a few people gather to dance in public space, count the number of people that stopped to look at the dancing in a time interval of 5 or 15 minutes - depending on the type of activity. Includes a progress indicator for Expertise, Workload, and Requirements.
- REQUIREMENTS:**
 - Access to social media accounts.
 - A customized worksheet to mark the positive deviances, their duration, the number of people attracted and the length of their stay.
 - At least one surveyor per area.
 - At least one survey during the day, nighttime, weekdays, and weekends.
- DIGITAL:** Positive deviance is best analysed on a district scale because a large number of places and images are needed to find a significant amount of cases.
- ON SITE:** On Site analysis are the best choice for positive deviance because spontaneous behaviours are not always documented and shared on social media - unless they attract a large number of people or a meaningful for certain individuals. However this requires a major effort in surveying public space for extensive periods of time.
- HYBRID:** An hybrid approach may work best because if an emergent activity or use is worth sharing it will be present on social media and on-site observations help integrating more cases of undocumented positive deviance.
- Page Info:** 2022 SEP, P.30, WW logo.

Futurability

- Future is not contained or linearly connected to the present.
- A desired future state is possible to imagine when it's reimagined by collectivised institutions.
- Breach the creativity myth and find solution to unlock people's creativity.

Potere ¹

Energy, Idea, Collective
Intelligence

Process of collectivised ideation
and futurisation of the present

The energy produced by social
imagination through the ideation
and visualisation of desired
future states.

Translates the complexity of
unexpressed feelings to the
coherence of ideas.

Potenza

Power, Instrument,

RACHEL McADAMS

TAYLOR KITSCH

TRUE DETECTIVE

1. John Friedmann's (1973) idea of "transactive planning"

Conflicting vocabularies

The power of participatory processes can be fully realised when participants are given a common, expressive language to mediate urban transformations.

An aerial, black and white photograph of a city. The image shows a dense grid of streets and buildings. A prominent feature is a large, curved highway interchange on the right side of the frame. A river or canal winds through the city, following the curve of the highway. The overall perspective is from a high angle, looking down on the urban landscape.

unRelatable perspectives

Cities look the way they look based on the way we chose to represent them.

Outdated medium

Breaking the ritual

Democracy is reduced to automatic rituals led by normative structures.

Social imagination is perceived as an abstract concept rather than planning tool

Impossibility for nearly everyone to imagine a different future and the lack of power to realise those ideas.

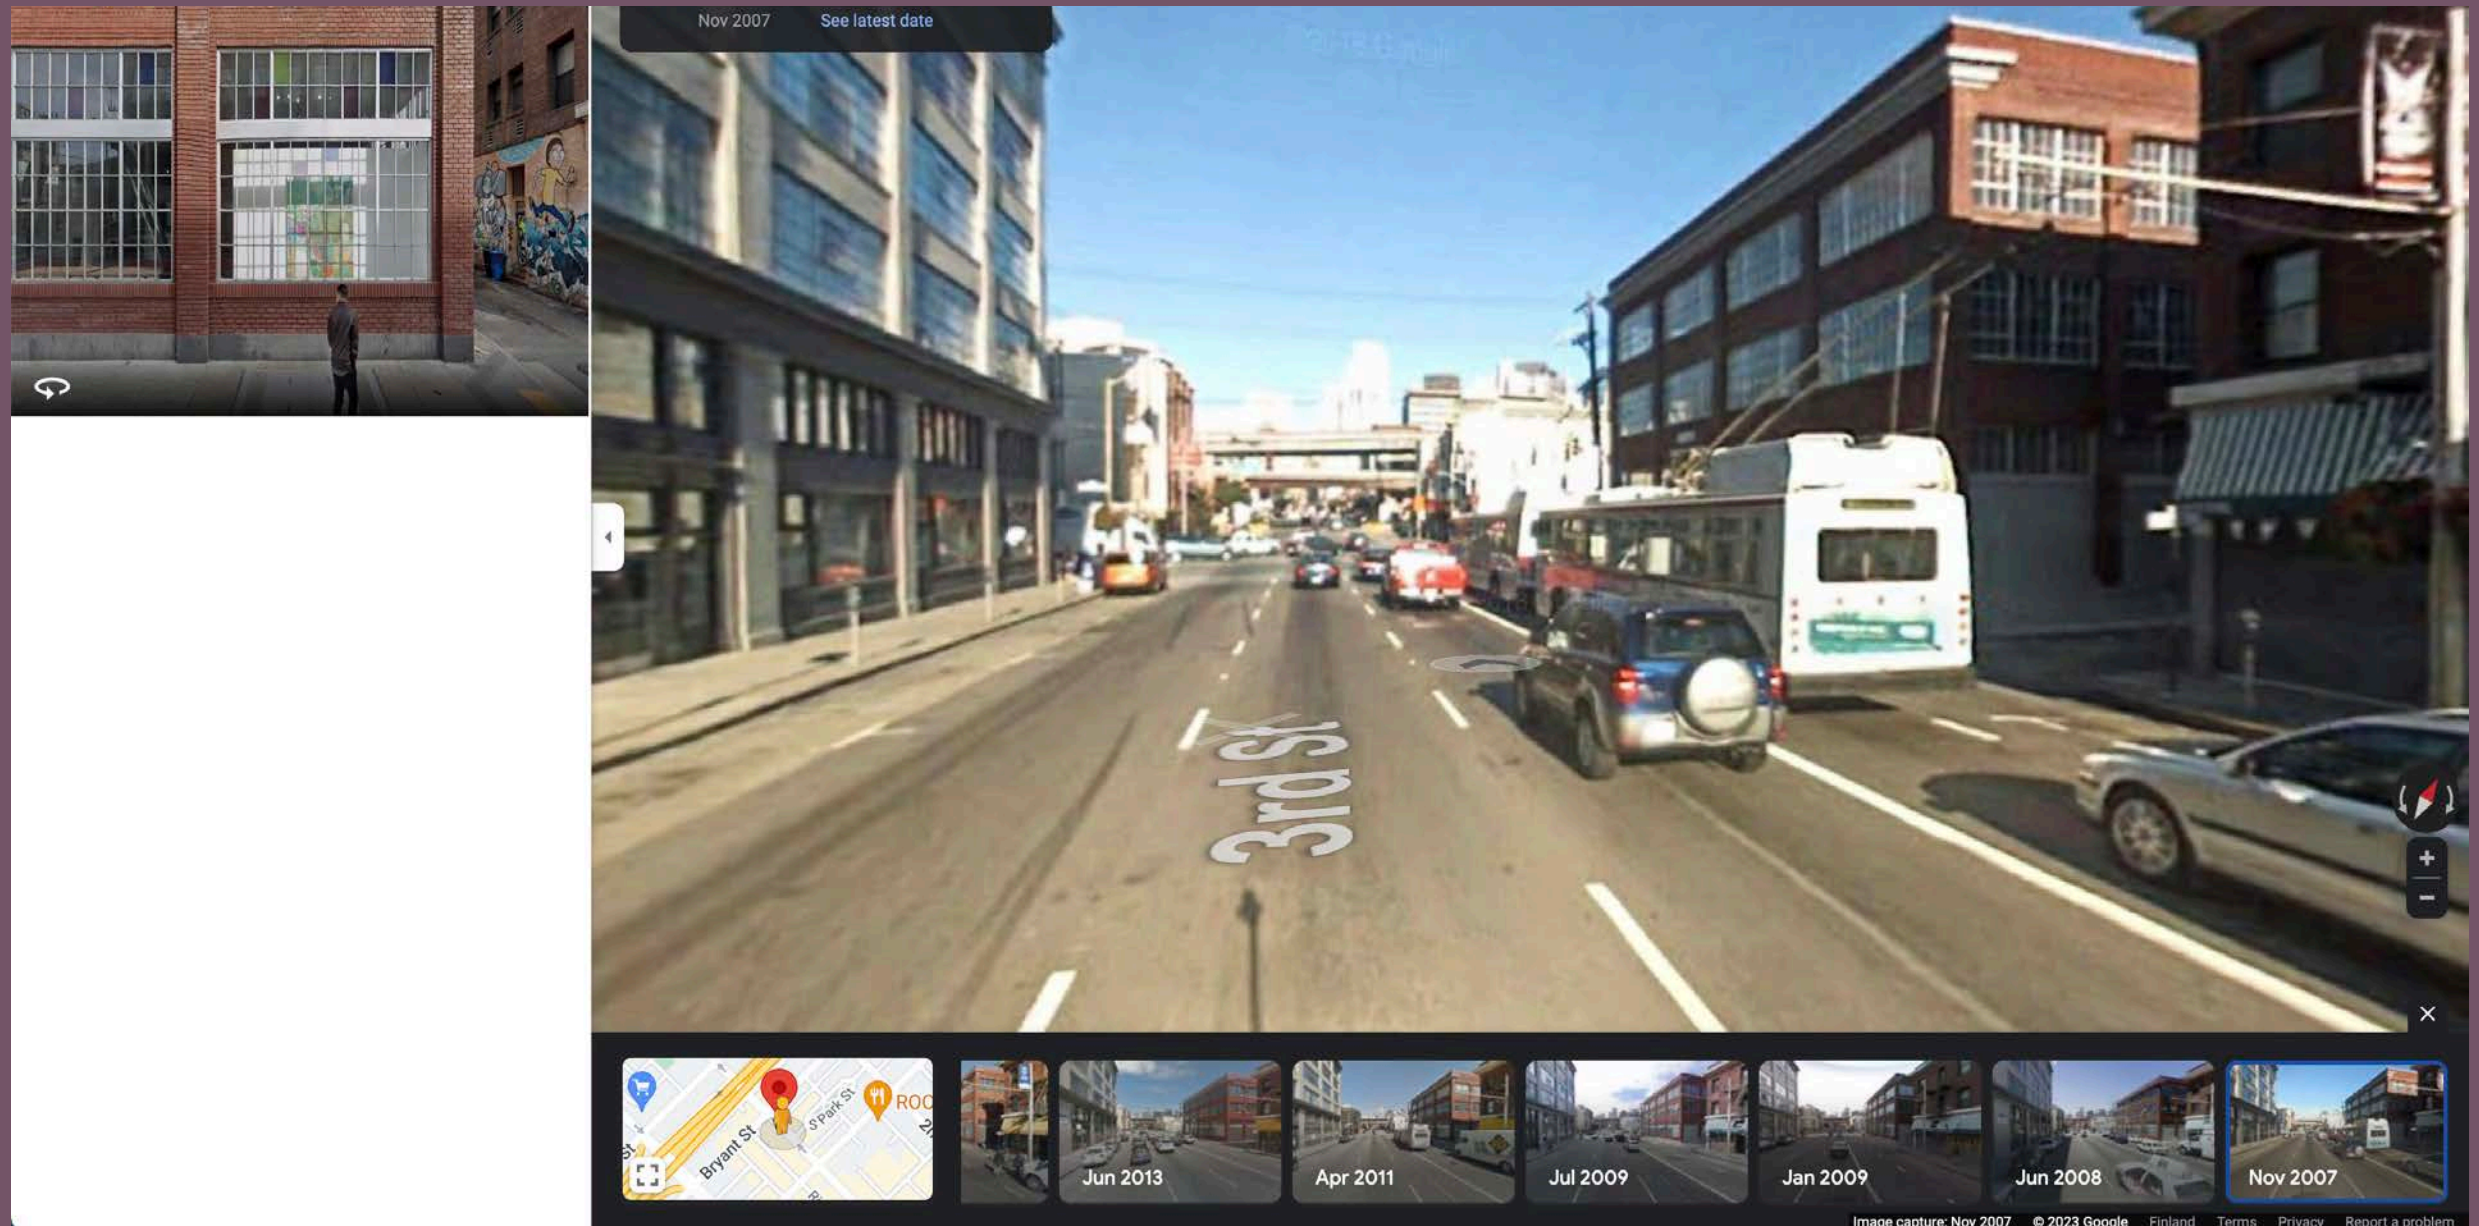

**The power of
participatory
processes can
be fully
realised only
when
participants
are given**
