

Welcome to SmartBook

Hello and welcome to SmartBook!

This term, you will be working with a unique online tool called SmartBook. Your instructor has assigned regular SmartBook readings for you, so here are some things you might find useful to know.

SmartBook 2.0 is an adaptive reading tool which allows you to master the basics and foundations of every chapter quickly and efficiently with the support of technology designed to ensure you make the most of every minute you spend studying.

- Your instructor creates a reading assignment by selecting topics which are particularly important in your studies
- You will access the assignment and focus on the highlighted sections of text
- You will click the NEXT CONCEPT button to navigate to the next section
- Read and click until you feel as though you understand the material, then click on TO QUESTIONS
- The system will ask you questions based on the material you have read.
- You will select an answer and indicate how confident you are with your effort
- If you answer the question correctly, you will see the progress bar start to fill up
- If you answer incorrectly, the system will suggest you go back and READ ABOUT THE CONCEPT.
- To complete the assignment and receive 100% you need to answer TWO questions correctly on each concept. You can get questions right and wrong, with high and low confidence along the way, but once you ultimately answer 2 questions right on each concept, you are done.
- There is no way to cheat or skip through the process. The quickest way to work through, is, quite literally, read, understand, answer the questions.

Study smarter

The system uses data collected during your initial attempt to create PRACTICE assignments called RECHARGE, which will focus on the areas you showed particular weakness in first time around, to save you time and effort on revision.

There is NO penalty for incorrect answers, or for indicating that you are not very confident, so be honest with yourself and with the system as this will allow the system to personalise your recharge assignments better.
