## What is visual research?

It is the study and interpretation of images, forms and objects

## Aim of visual research

...is to examine the effects of images, forms and objects on people

## image

1. a reproduction or imitation of the form of a person or thing
2. the optical counterpart of an object produced by an optical device (as a lens or mirror) or an electronic device
3. a visual representation of something: such as
  - 3a. a likeness of an object produced on a photographic material
  - 3b. a picture produced on an electronic display

[www.merriam-webster.com](http://www.merriam-webster.com)

## form

1. the shape and structure of something as distinguished from its material
2. the essential nature of a thing as distinguished from its matter

www.meriam-webster.com

## object

1. something material that may be perceived by the senses

www.meriam-webster.com

## culture

1. enlightenment and excellence of taste acquired by intellectual and aesthetic training
2. acquaintance with and taste in fine arts, humanities, and broad aspects of science as distinguished from vocational and technical skills
3. the integrated pattern of human knowledge, belief, and behavior that depends upon the capacity for learning and transmitting knowledge to succeeding generations

www.meriam-webster.com

## culture

1. the customary beliefs, social forms, and material traits of a racial, religious, or social group
2. the characteristic features of everyday existence (as diversions or a way of life) shared by people in a place or time
3. the set of values, conventions, or social practices associated with a particular field, activity, or societal characteristic

www.meriam-webster.com

Culture, it is argued, is not so much a set of things – novels and paintings or TV programmes or comics – as process, a set of practices. Primarily, culture is concerned with the production and exchange of meanings – the 'giving and taking of meanings' – between the members of a society or group ...This culture depends on its participants interpreting meaningfully what is around them, and 'making sense' of the world, in broadly similar ways.

Stuart Hall

arcthemagazine.com

## Visual culture

...a tactic for studying the functions of a world addressed through pictures, images, and visualizations, rather than through texts and words.

Nicholas Mirzoeff

## Visual culture

...takes into account issues such as image making, the formal components of the image, and the cultural reception of that image.

Nicholas Mirzoeff

## Visual methods

...can use **already-existing** images, from the mass media for example; or images can be **made** by the researcher; or they can be made by the people being researched.

## Visual methods & visual research methods

Gillian Rose separates

- **visual methods**: used on already-existing (found) visual material
- **visual research methods**: used on visual material made by the researcher or participants

METHOD	VISUAL MATERIAL
compositional analysis (interpretation)	fine art paintings, video games, films
content analysis cultural analytics	any sort of images in large numbers, newspapers, magazines, selfies
semiology social semiotics	advertising, fine arts, films
psychoanalysis	films and mass media
discourse analysis I	wide range of still images, book illustrations, maps, photographs, paintings, cartoons
discourse analysis II	institutions that display visual images and objects (e.g. museums and art galleries)
ethnography	television audiences
digital methods	digital objects like tweets and Instagram photos
visual research methods	photography, video, collage, maps, drawing

visual research methods	photography, video, collage, maps, drawing

## Compositional interpretation

It is crucial to look at image... because the image itself has its own effects.

Gillian Rose

## Compositional interpretation

This method depends on what is called "the good eye" or visual connoisseurship – a way of looking at images, especially paintings

Connoisseurship involves the acquisition of extensive **first-hand experience** of works of art with the aim of, first, of attributing works to artists and schools, identifying styles and establishing sources and influences, and second, of judging their quality and hence their place in a canon.

Eric Fernie

## Compositional interpretation

- looks at the site of an image itself to understand its significance
- pays attention to the compositional modality of the image
- looks at "what they are", and a perhaps how they are made
- does not look at their interpretation by their audience
- is more about **description** than interpretation
- is neither methodologically nor theoretically explicit

## Content analysis

...is a method of analysing visual images that was originally developed to interpret written and spoken texts.

Gillian Rose

## Content analysis

...is based on a number of **rules and procedure** that must be rigorously followed for the analysis... to be reliable.

Gillian Rose

## Content analysis

...concern the selecting, coding and **quantitative** analysis of a large number of images.

Gillian Rose

## Content analysis

...it's explicit **quantitative** methodology, through which... analysis would be rigorous, reliable and objective.

Gillian Rose

## Content analysis

There are **four main steps** in content analysis

1. finding images
2. devising categories for coding
3. coding the images
4. analysing the results

## Content analysis : finding images

The images chosen must be **appropriate** to the **research question**

- images need to be representative
- selection can be random, systematic, or cluster
- need to decide what size the sample should be
- sample should be large enough, but not overwhelming

## Content analysis : categories for coding

Coding means assigning a set of **descriptive labels** to images

- **exhaustive**: every aspect of the image must be covered
- **exclusive**: categories must not overlap
- **enlightening**: must be analytically interesting and coherent

## Content analysis : coding images

Coding process must be **replicable** (repeatable)

- coding categories must unambiguous
- coding by different people must result in the same codes
- coding must be systematic and careful

## Content analysis : analysing the results

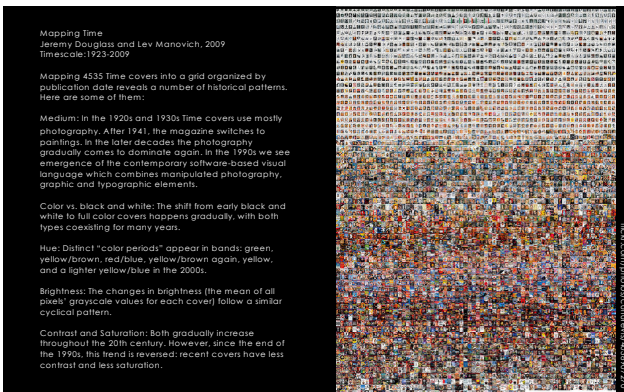

Analysis involves producing a **quantitative** account of the content

- producing **frequency counts** (numbers or percentages)
- making **comparisons** (across time, space, etc.)
- finding **relationships** between categories (e.g. correlations)

## Cultural analytics

Is similar to content analysis

- but the process of coding and analysis is **automated**
- allows working with very large sets of images
- no need to sample (select) a sub-set of images

## Semiotics (semiology)

...is the study of signs and their interpretations.

Gjoko Muratovski

## Semiotics

Compositional interpretation is **descriptive**, content analysis is **quantitative**, and semiotics is **interpretive**

## Semiotics

...does require a **high level of knowledge** about the topic of your study.

Gjoko Muratovski

## Semiotics

...involves describing how images and objects create meaning by observing them from a particular ideological platform.

Gjoko Muratovski

...laying bare the prejudices beneath the smooth surface of the beautiful.

Margaret Iversen

www.artexchange.org.uk

## Semiotics

Semiotics is the science of signs and their meanings

- sign: the most fundamental unit of semiotics
- signified: a concept or an object (e.g. a very young human)
- signifier: a sound or image attached to a signified (e.g. 'baby')

www.artexchange.org.uk

What was needed was someone who wasn't cute, but so sexy you'd walk over hot coal just for the chance to play. Someone who wasn't safe and predictable, but fascinating and more than a little dangerous. Someone who wouldn't bend to your will at the drop of a hat, but fight you all the way. Someone who's a very sexy challenge. Just like a good Alfa. So Alfa got Uma Thurman. She may not be Italian but she fits the bill better than any one we can think of.

SANS COÛR, INOUSINE SÉRIONS QUE DES MACHINES.

Alfa Romeo logo

## Semiotics

There are three kinds of relations between a signifier and signified

- icon: the signifier represents the signified by apparently having a likeness to it (e.g. photo of a baby)
- index: there is an inherent (e.g. cultural) relationship between the signifier and signified (e.g. picture of a diaper)
- symbol: there is conventionalised but arbitrary relationship between the signifier and signified (e.g. Uncle Sam)

## Social semiotics

In social semiotics the focus [has] changed from the 'sign' to the way people use semiotics 'resources' both to produce communicative artefacts and events and to interpret them – which is also a form of semiotic production – in the context of specific social situations and practices.

Theo van Leeuwen

## Good visual research

It is important to **critically examine** the meaning of visual material and the messages they convey
