

IDENTITY OF SPACE

12.1.- 23.2.2021

Aalto University / Spatial studies MA 1, Module C / Identity of Space

TASK 02 new space, new atmosphere

Deadline Thursday 28.01.2021, 9.15

The second task is to find another space than used in the first task. Clean it up from all the existing atmospheric features (to tabula rasa) and build up a whole new atmospheric condition by using two ingredients your group chose and presented in the task 1.

The ingredients were in the earlier task separated and analysed individually. Now it's time to merge two atmospheric features together into a new configuration, in new spatial context. Choose a space where you believe are the strongest possibilities to make the difference. The location, scale and nature of the space are up to you to be decided. The functional aspects of space are not so important this time, we are concentrating more on abstract qualities in space - how one can manipulate the spatial sensation by the means of conscious design approach.

Present the outcome freely in pdf format in max. 15 minutes / a group. Since you are working in groups, it's possible to present three (or two) different spaces including different combinations. Merge the group members' (possible) individual parts and spaces into one file. You can include material such as photographs of the original condition, manipulated photographs, plans, sections, details of the features, etc. to clarify the situation. The aim is to learn how much different features in space can effect on our perception of its atmosphere.

Good luck!
