Continuum Mechanics and Material Modelling; MEC-E8002, 2021

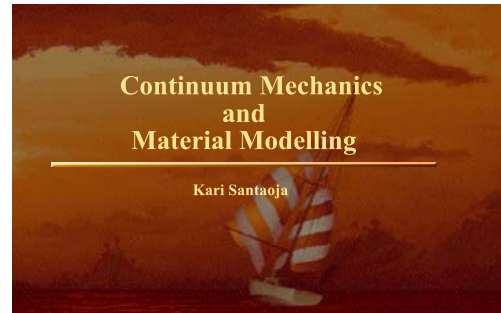

## Warranty of understanding

The course MEC-E8002 "Continuum Mechanics and Material Modelling" has a warranty of understanding.

I guarantee that all the course material is readable, and that everyone can understand its content.

However, if someone feels that the material is too difficult and the text is too hard to understand, I will offer free private coaching.

The student does not have to prove that the text is too cumbersome; his or her personal opinion is sufficient. The student can contact me, e.g. by email, and we can agree on the most suitable time.

## Comment points

The following text is copied from the course leaflet: "Students can make comments and suggestions for enhancing the course material. The comments can give up to 2 additional points in the examination."

The goal of the comment points is to push the students to use the opportunity to utilise the warranty of understanding instead of to hide that he or she does not understand some part of the book or lectures. This is a tough course.

Besides the above goal I am interested to get information on weakly written parts of the book. When knowing that, I can enhance the readability of the book for the following years.

Best Regards,

Kari Santaoja
