ESS Cells live & counting

# 5G starting with enhanced MBB and then enabling new evolved IOT use cases

First use cases

# Proofing 5G technology & learning new use cases and requirements

**5G**  
For industries  
Established 2015

Ericsson Research Initiative:  
Pave the way for 5G in industries  
Drive 5G requirements, insights and readiness

Covers several industry segments:  
Transport, energy, manufacturing, mining, agriculture, ...

# 5G is ready to serve industries

5G standard address industrial requirements

Strong industry fora established

Key requirements validated

Industrial devices emerging

## 3GPP

Rel-15 includes key URLLC features. Rel-16 enhances IIoT and URLLC. Rel-17 and Rel-18 expand industries

## >75

5G-ACIA with >75 members from connected industries and telecom drives requirements and solutions for 5G enabled industries

## >50

5G requirements validated in >50 industry PoCs with leading industrial partners

## 10+

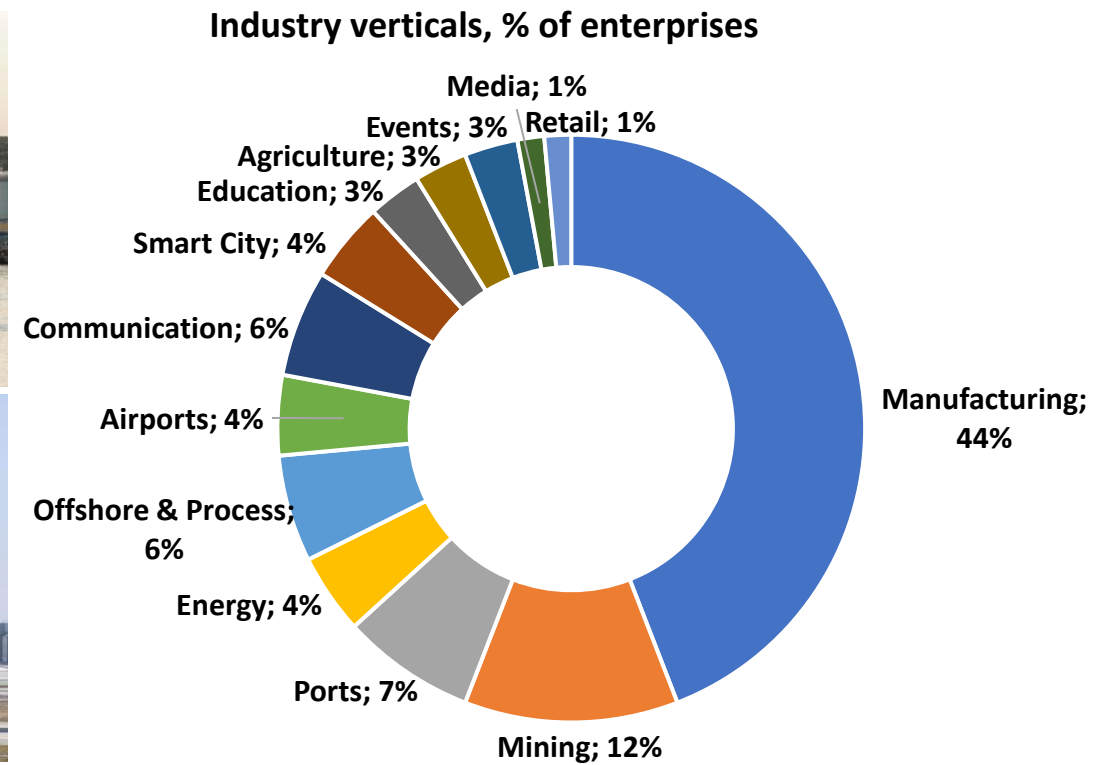

More than ten 5G modules and devices for industrial use being released during 2021

# Industry take-up is broad

Industry take-up is broad, led by Manufacturing with a 5G focus.

Other critical infrastructure industries typically lead with LTE and a focus on connected workers or automation

# 5G Private Network empower Ericsson Nanjing factory

Won the 2020 ICT China Innovation Award and the 2020 Blooming Cup National Award

---

Automated  
manufacturing

5G Drone inventory counting – No.1

5G Cloud AGV

---

More efficient  
production

5G surveillance camera

5G AR training

---

Increased  
quality

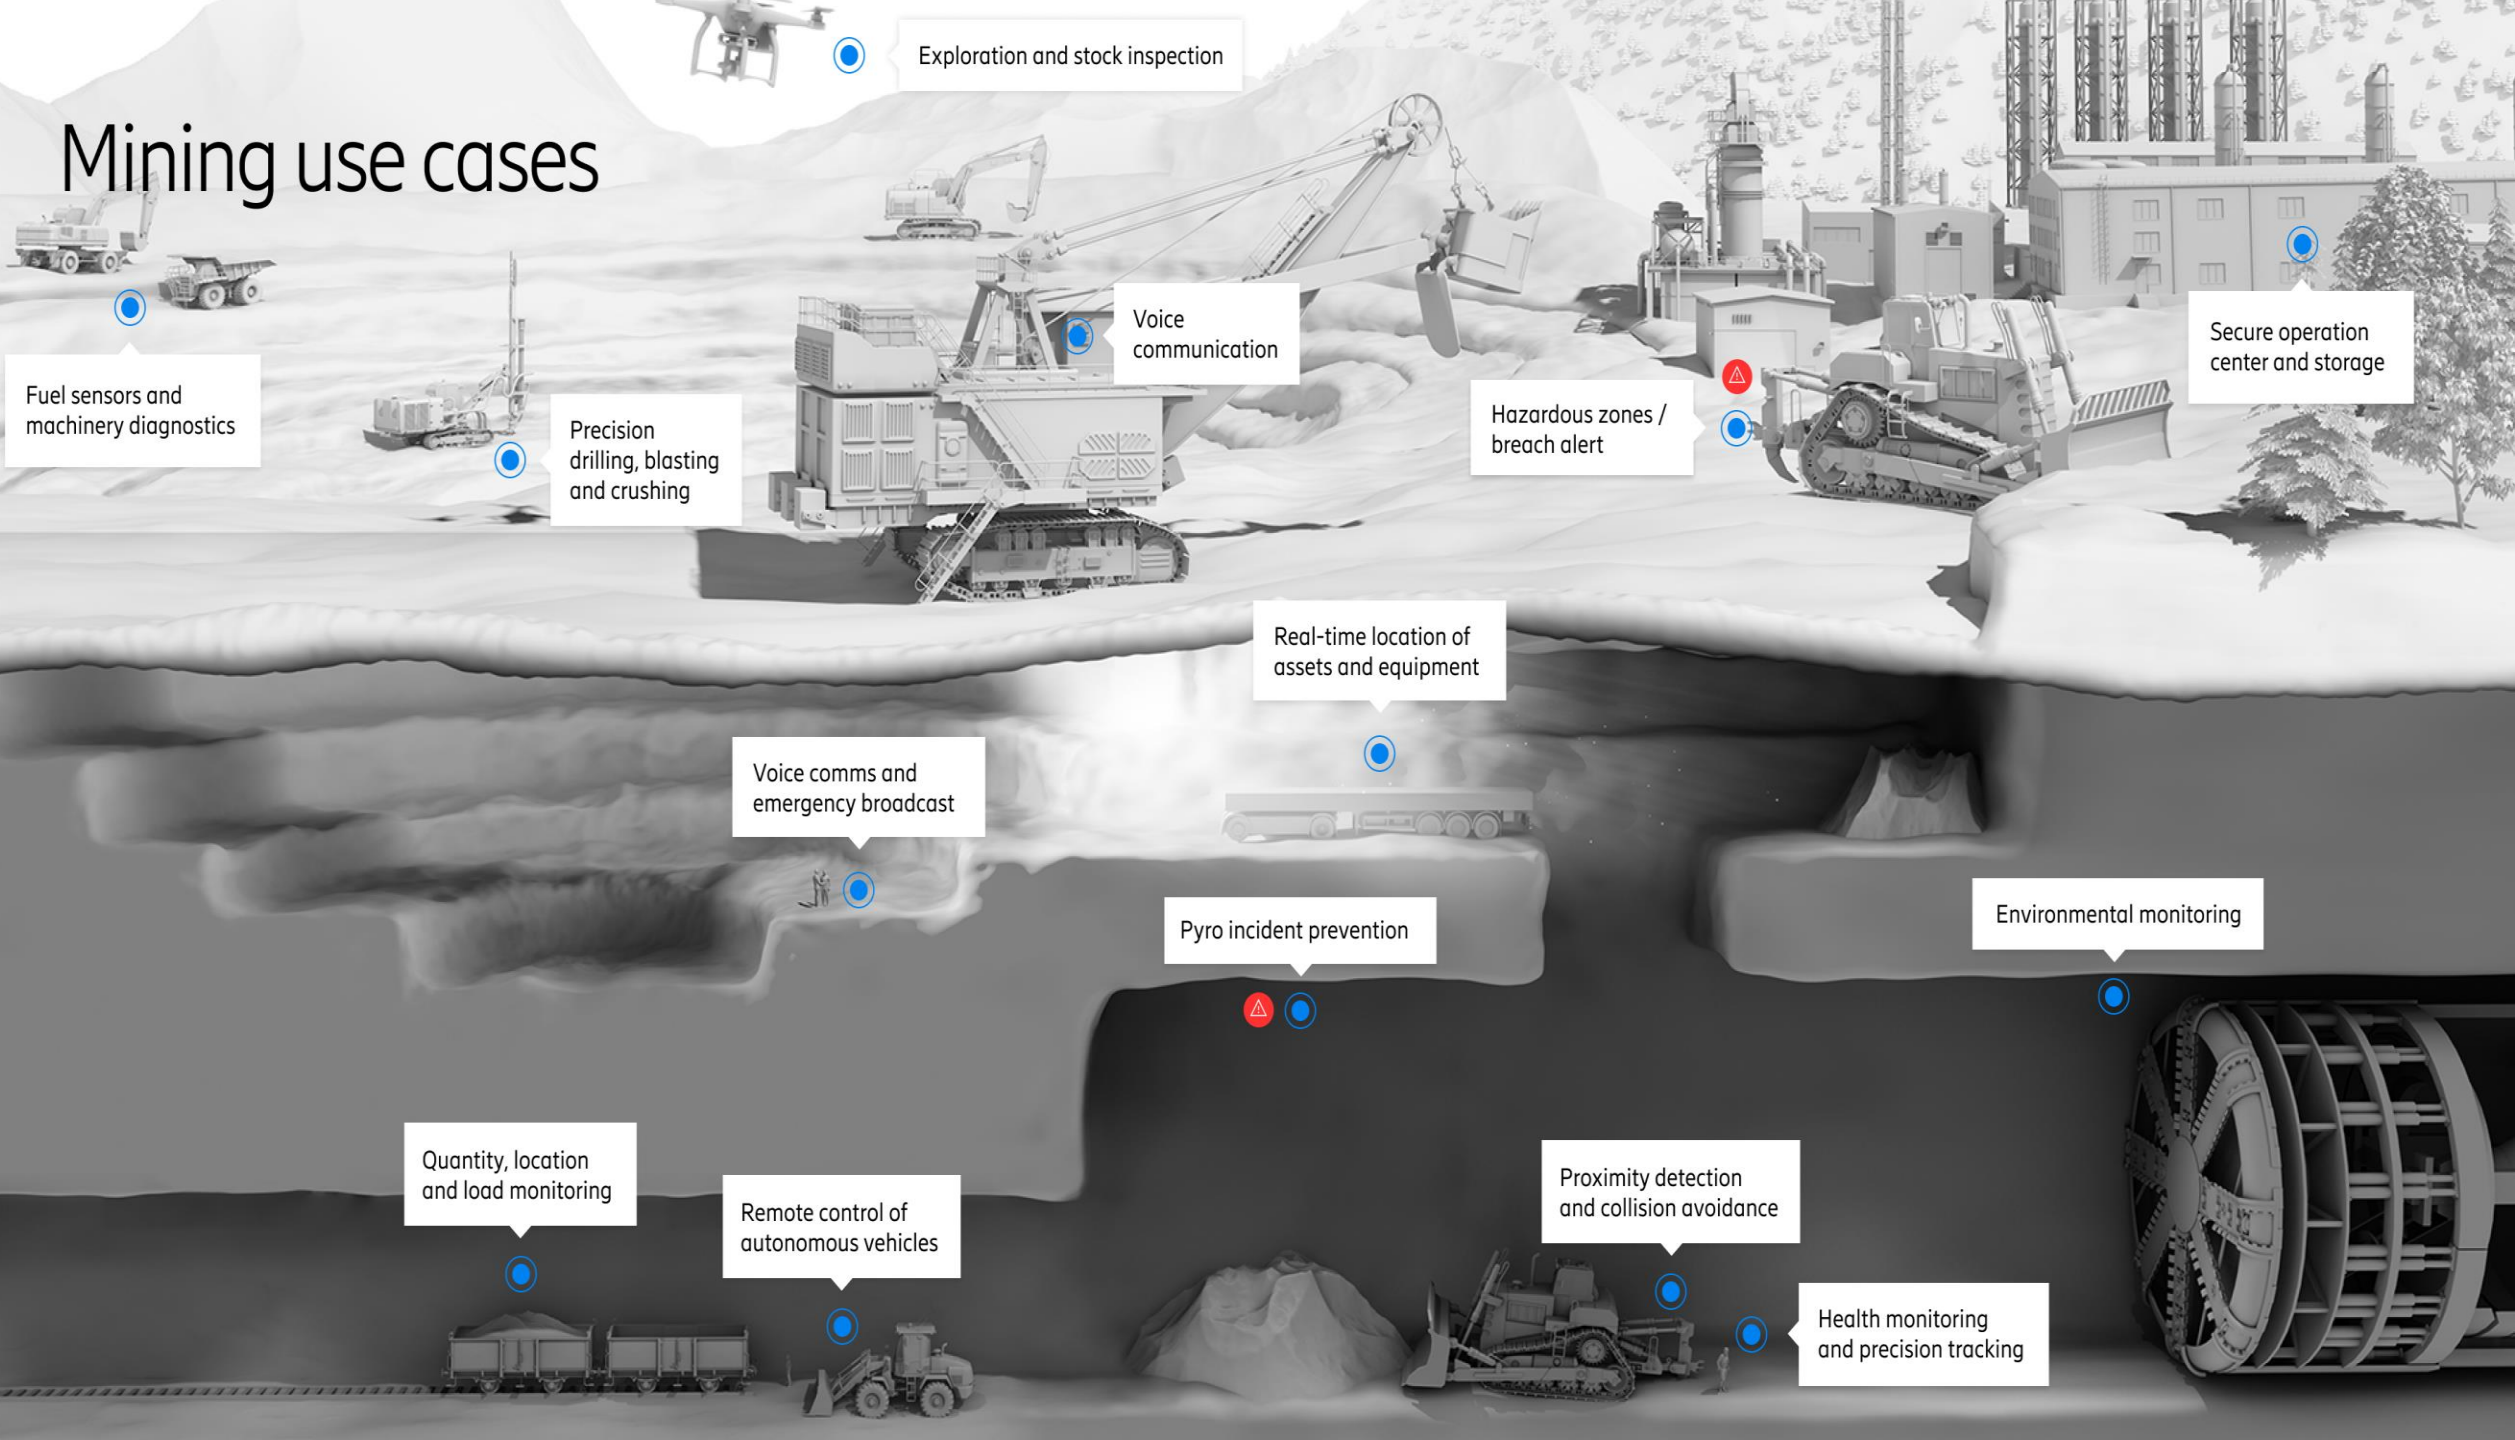

5G industrial computer

5G AR remote assist

# Mining use cases

# Industry needs

- High reliability and availability
- Low latency
- Easy integration with IT/OT systems
- Easy installation, management, operation and maintenance
- Additional use cases like positioning, edge cloud
- Coverage at multiple sites
- Local survivability
- High security and privacy
- Data stays local

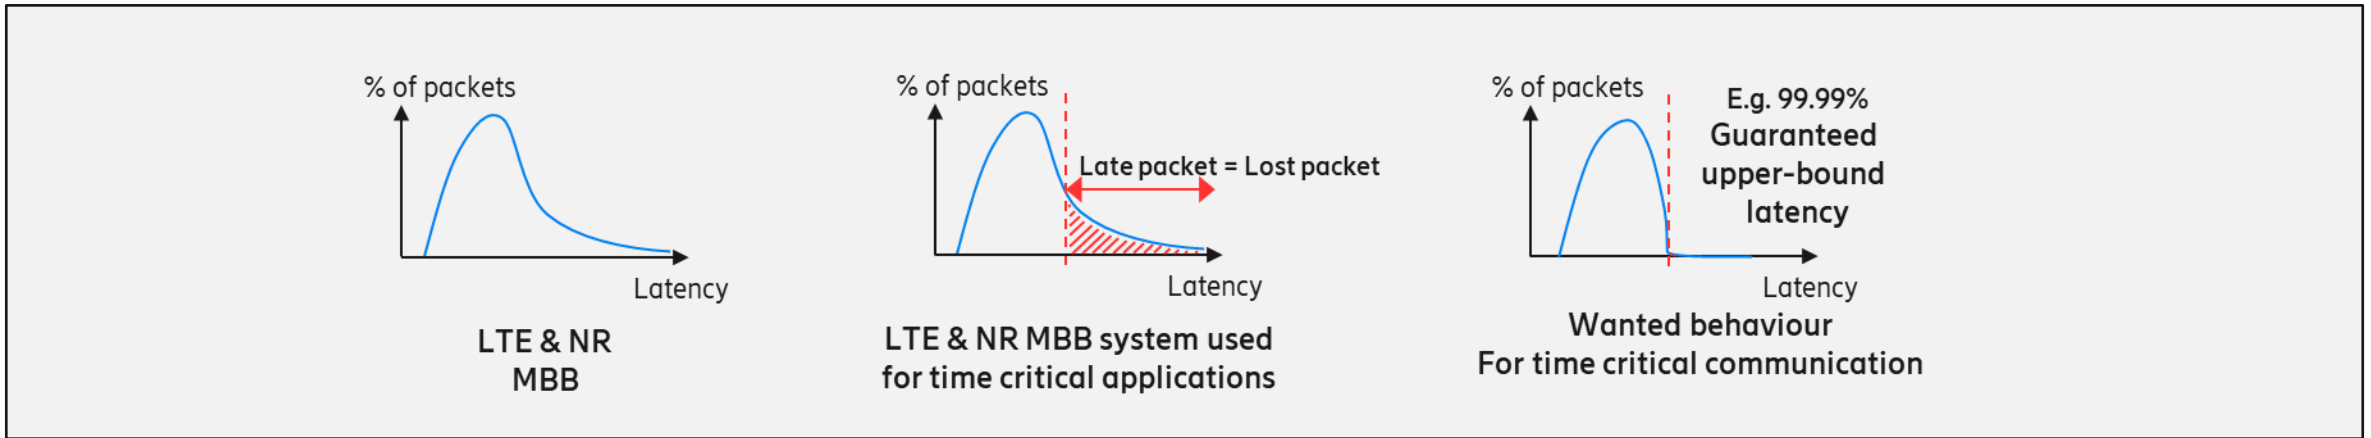

# Time-Critical Communication

Data delivery within specific latency bounds with required guarantee levels\*

NR was standardized for MBB & URLLC from day one. Some URLLC features were specified in a URLLC work item but URLLC is not limited to the URLLC WI-specified features.

# 3GPP 5G standard addresses industrial needs

Rel-15

## Key URLLC (Ultra Reliable Low Latency) features

- First 5G release
- Key features for low latency and high reliability

Rel-16

## Industrial IoT

- Support for IEEE time sensitive networking (TSN)
- Non-public network enhancements, positioning, time-sync

Rel-17

## Efficiency and scale

- Enhanced efficiency and capacity for URLLC
- Improvements for positioning and time sync

Rel-18

## Expand use cases (Ericsson view)

- Addressing AR/VR, remote control, media production
- Ultra reliability for high bitrate applications

# Deployment and Spectrum

# Three main deployment options for local network coverage

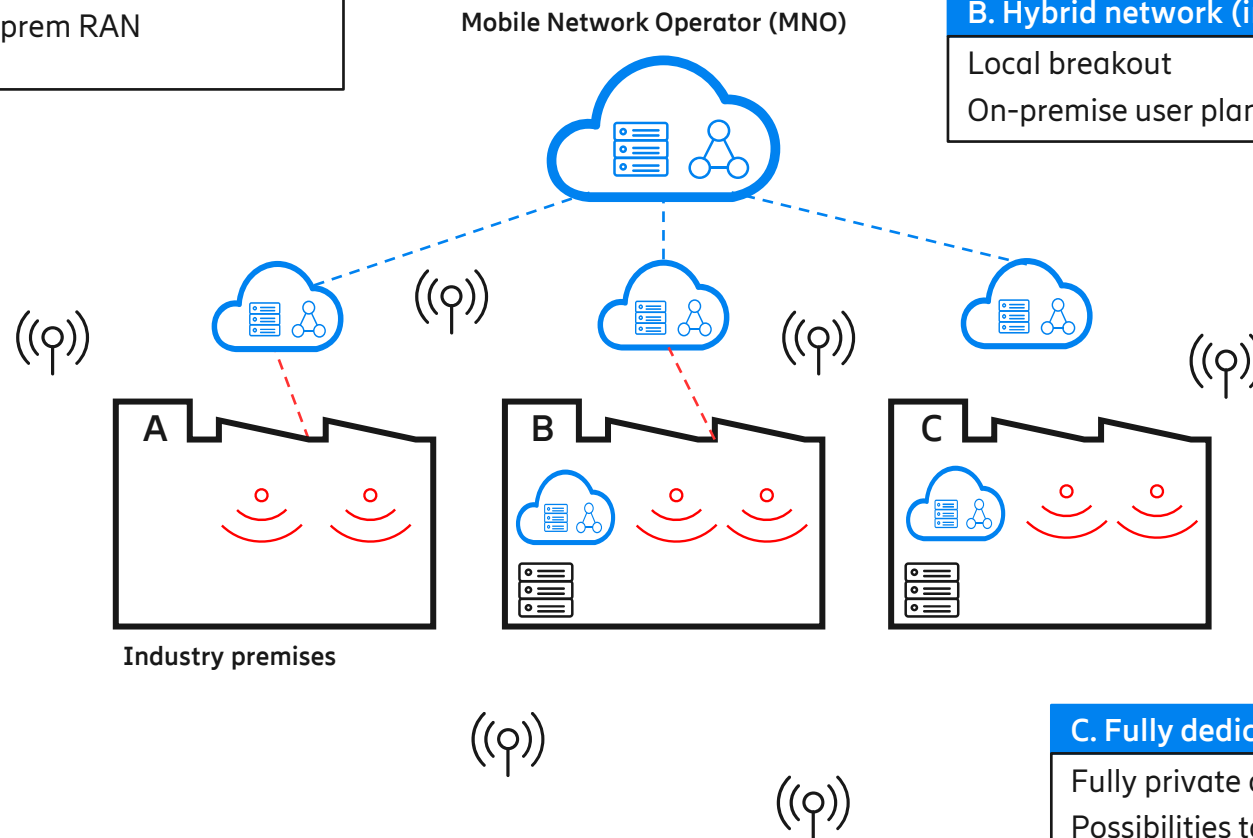

## A. Using public network

Network slicing  
Macro RAN coverage or on-prem RAN

## B. Hybrid network (integrated with MNO network)

Local breakout  
On-premise user plane and RAN

## C. Fully dedicated network

Fully private on-premise network  
Possibilities to integrate with public network

# Industry Spectrum raises the attention of industry

## Mid band

Chile, China, Croatia, Czech Republic, Denmark, Finland, France, Germany, Japan, Netherlands, Norway, Poland, Sweden, UK, US

## High band, mmW

Australia, Brazil, Croatia, Finland, Germany, Hong Kong, Italy, Japan, Malaysia, Republic of Korea, Sweden, UK

3 ways for industries to access wireless spectrum

1. Managed service from mobile operator
2. Lease spectrum from mobile operator
3. Local dedicated spectrum (assigned by regulator)

<https://www.ericsson.com/en/reports-and-papers/white-papers/5g-spectrum-for-local-industrial-networks>

# Ericsson Private 5G

## Ericsson Private 5G

Pre-packaged

Scalable for all network sizes

Plug-and-play

Life-cycle management over-the-air

Open APIs for IT integration
