

Electronics for Artists

2021

Week #1

001 | Introduction

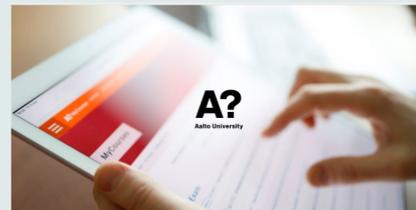

Course Website | Schedule, Course Structure etc.

- All information and materials can be found from our course website: newmedia.dog/c/efa
- File submissions and announcements from [MyCourses](#)
- Lecture slides: this Miro board

newmedia.dog

Electronics for Artists

The course introduces the use of electronics and physical computing as a creative medium in the field of new media art. It covers some basic electronic concepts and theory, various analog circuits, prototyping your own circuits, microcontroller programm...

Schedule

Week 1 | Intro

Introduction

Electricity

Basic Tools

Microcontrollers

Wed 3/11

Thu 4/11

Week 2 | Sensors

Sensors

Smoothing Data

Mapping

I2C

Wed 10/11

Thu 11/11

Week 3 | Output

Motors & Actuators

Digital LEDs

EFA Robot Project

Wed 17/11

Thu 18/11

Week 4 |

Serial

Native USB

WiFi (OSC)

Wed 24/11

Thu 25/11

Week 5 | Project

Levels of
Prototyping

PCB Design

Project Work

Wed 1/12

Thu 2/12

Week 6 | Project

Project Work

Wed 8/12

Thu 9/12

Week 7 | Project

Project Work

Exhibition Setup

13-17/12

Mon-Fri 9-17

Exhibition

13-17/12

Mon-Fri 9-17

Requirements

- Minimum 80% attendance
- I recommend attending 100%. **If you miss any classes, it is not my responsibility to catch you up.**
- **It is of course perfectly OK to not attend if you are sick or have some other urgent reason not to be present. Just let me know. Don't come to school sick.**
- Homework assignments (these are not for me, these are for you to learn and figure things out on your own)
- Project plan. A planning document that you update constantly during the course.
- Final project. Can be individual or group work (1-3 students).
- Documentation: Process and Final Project
- Exhibition (not compulsory but recommended)

Grading

- Grading 0–5
 - 0 Fail
 - 1 Poor
 - 2 Satisfactory
 - 3 Good
 - 4 Very Good
 - 5 Excellent

Grading

You will be graded based on the following criteria

- Active attendance to classes and discussions (25% of the grade).
 - Minimum 80% attendance
 - Your attitude and activeness in class
- The final project (50% of the grade). You will be evaluated based on:
 - Aesthetic quality of the work
 - Novelty and creativity of the concept
 - Critical approach to the topic
 - Command of the technology
 - Attention to detail
- Documentation of the final project (25% of the grade). You will be evaluated based on:
 - Critical reflection
 - Quality of the audiovisual documentation
 - The amount of detail and depth in the documentation

What is Electricity?

Voltage

- Symbol: V (U in some parts of Europe, E is sometimes used in the USA)
- Unit: Volt (V)

Voltage is the difference in electric potential energy between two points.

You can consider voltage to be similar to the pressure of water in the image on this slide.

learn.sparkfun.com

Voltage, Current, Resistance, and Ohm's Law

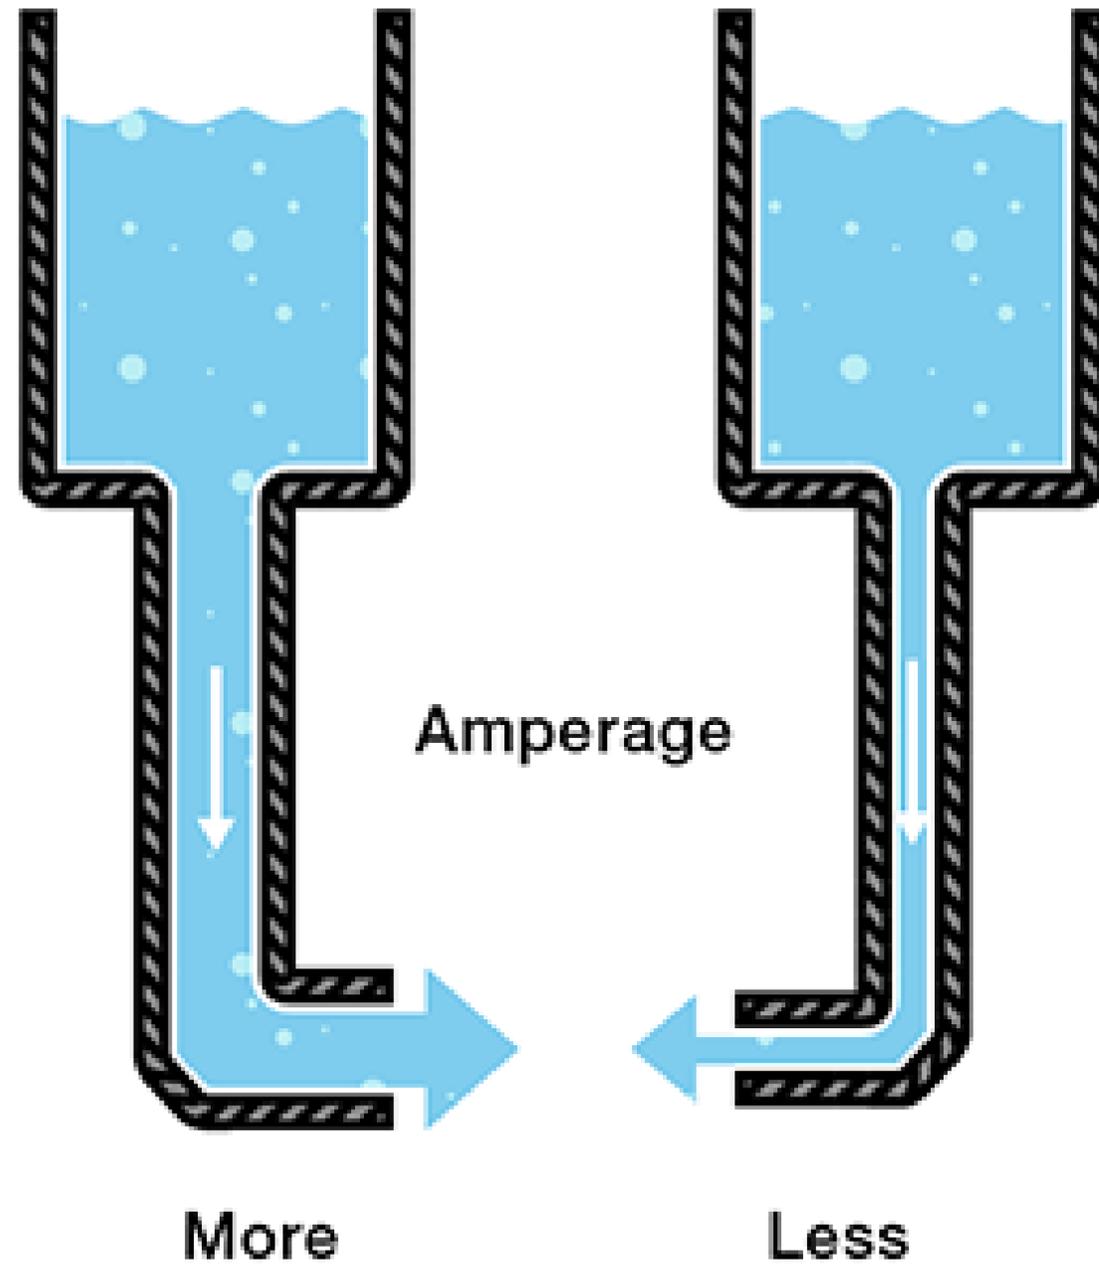

When beginning to explore the world of electricity and electronics, it is vital to start by understanding the basics of voltage, current, and resistance. These are the three basic building blocks required to manipulate and utilize electricity. At first...

Current

- Symbol: I
- Unit: Ampere/Amp (A)

Current is the flow of electric charge.

In our water analogy, current would be the water current or water flow. The amount of water that flows in a water pipe.

learn.sparkfun.com
Voltage, Current, Resistance, and Ohm's Law
When beginning to explore the world of electricity and electronics, it is vital to start by understanding the basics of voltage, current, and resistance. These are the three basic building blocks required to manipulate and utilize electricity. At first...

Resistance

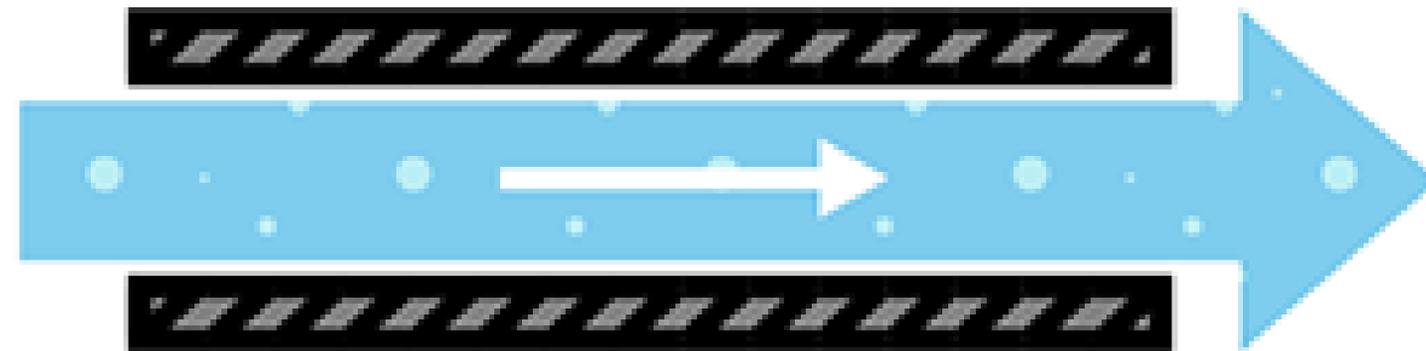

- Symbol: R
- Unit: Ohm (Ω)

Resistance is the measure of a material's ability to oppose the flow of electricity.

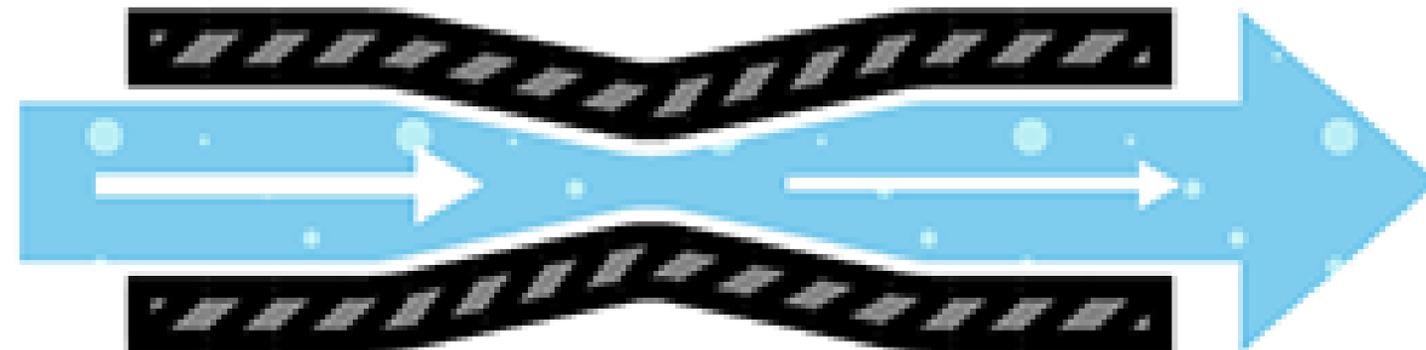

In our water analogy, resistance is like a narrowing or clog in the pipe that makes it harder for the water to flow through.

Resistance

Less resistance

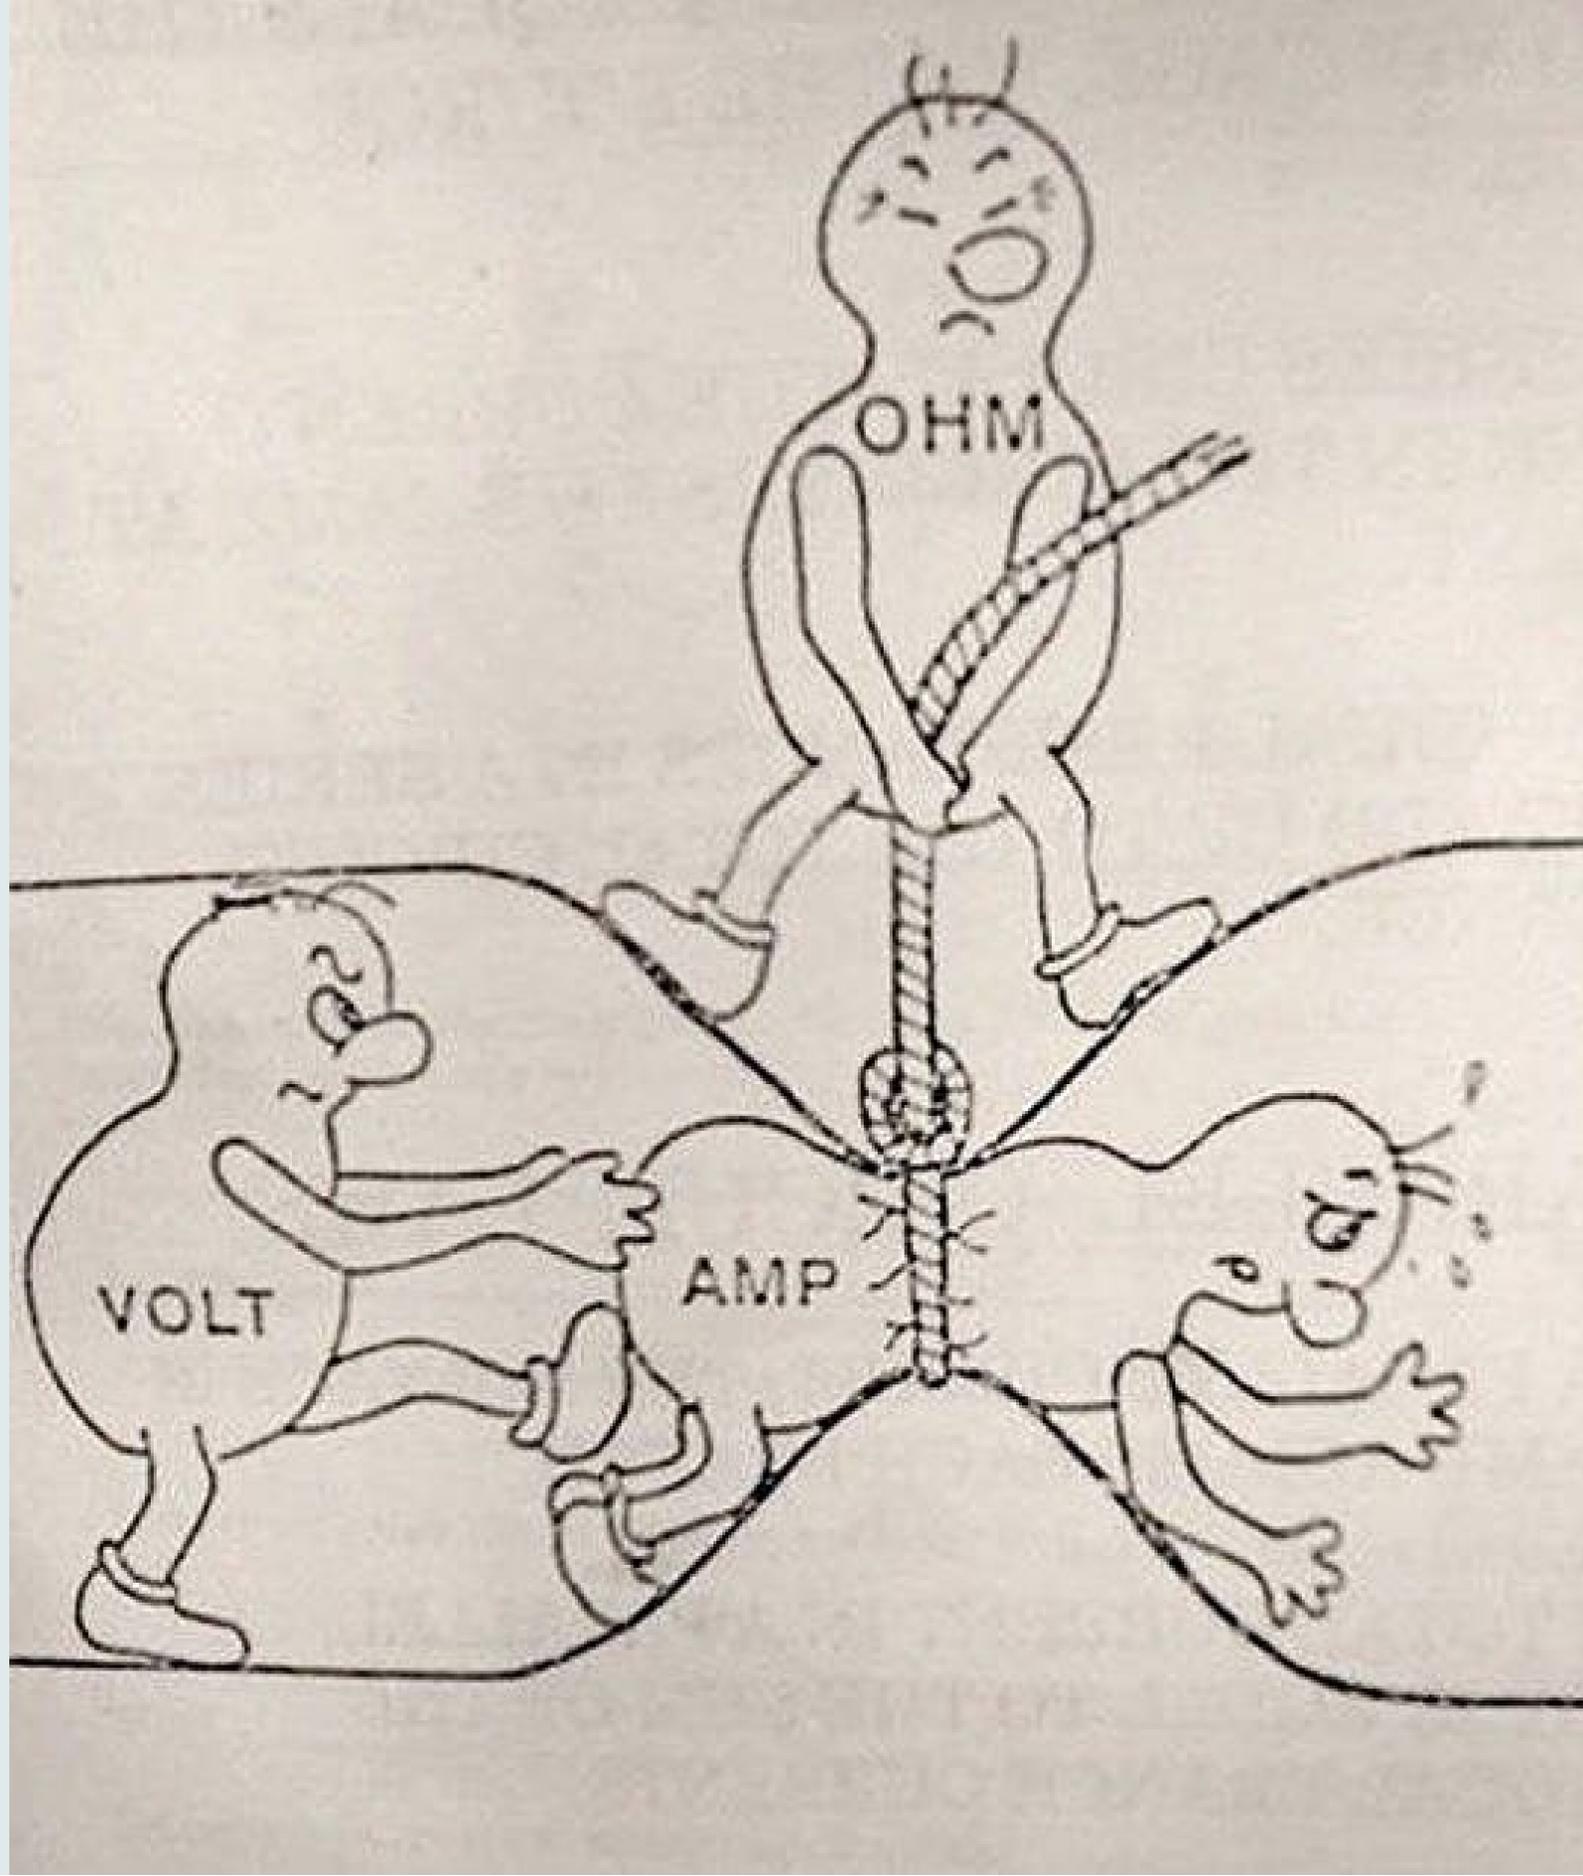

More resistance

Conventional Flow

This direction was decided before we knew how atoms work

Conventional Flow Notation

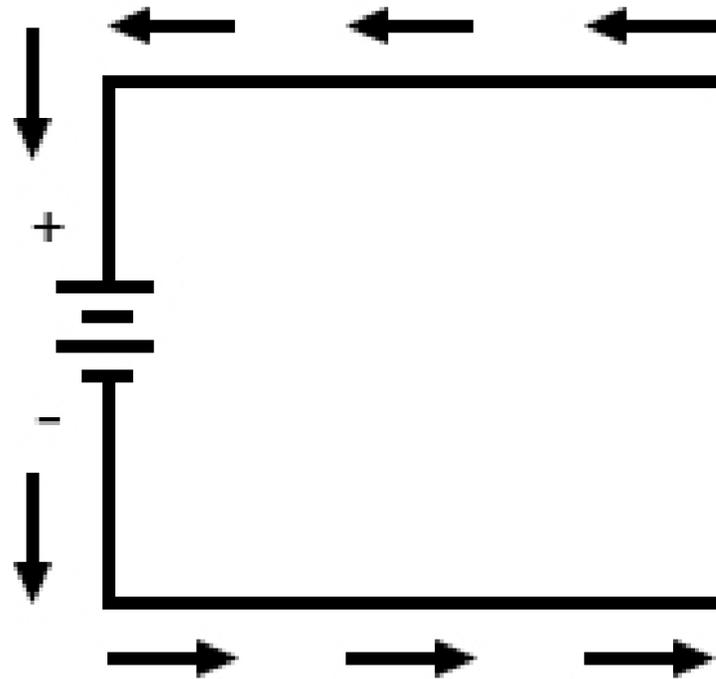

Electric charge moves from the positive (surplus) side of the battery to the negative (deficiency) side.

Electron Flow

This direction
is physically
accurate

Electron Flow Notation

Electron charge moves from the negative (surplus) side of the battery to the position (deficiency) side.

 www.allaboutcircuits.com

**Conventional Versus
Electron Flow | Basic
Concepts Of Electricity
| Electronics Textbook**

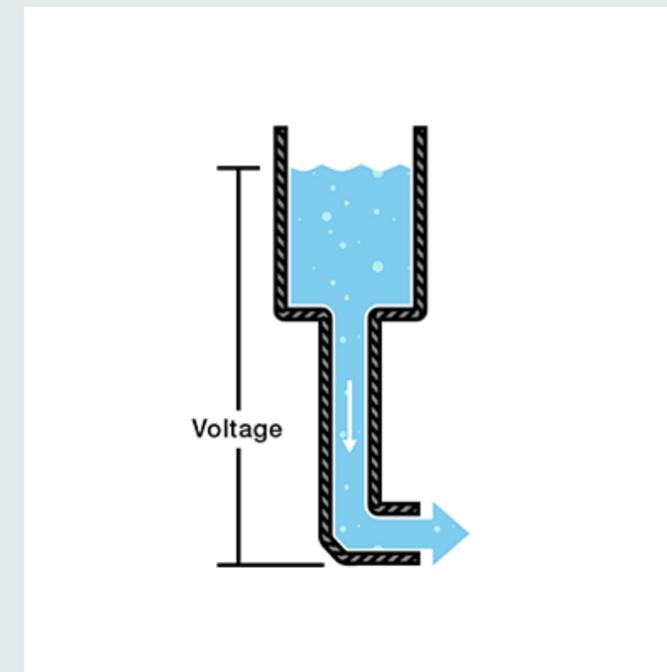

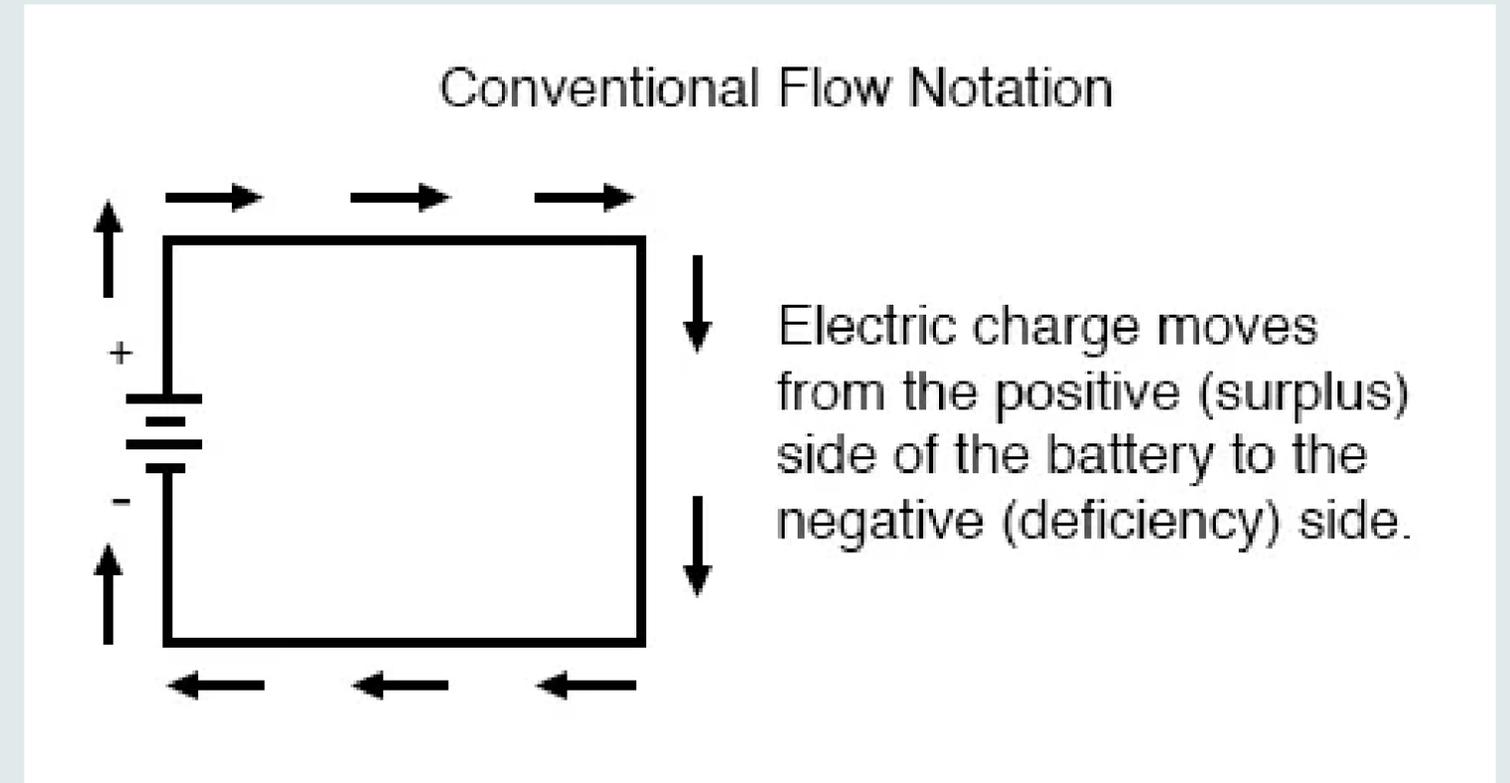

Read about Conventional Versus Electron Flow (Basic Concepts Of Electricity) in our free Electronics Textbook

Which one to use?

We are going to use the conventional flow, since many schematic symbols are easier to learn when you think of current flowing from + to -

Our water analogy works also better this way.

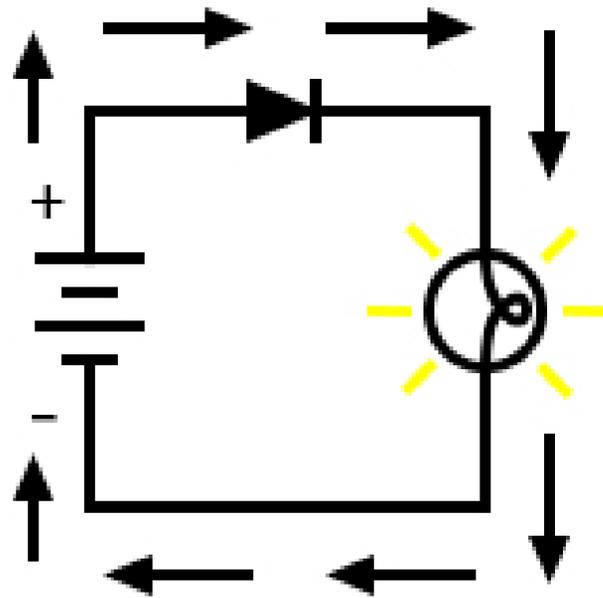

The math and pretty much everything else works the same no matter which way you to imagine the current flowing.

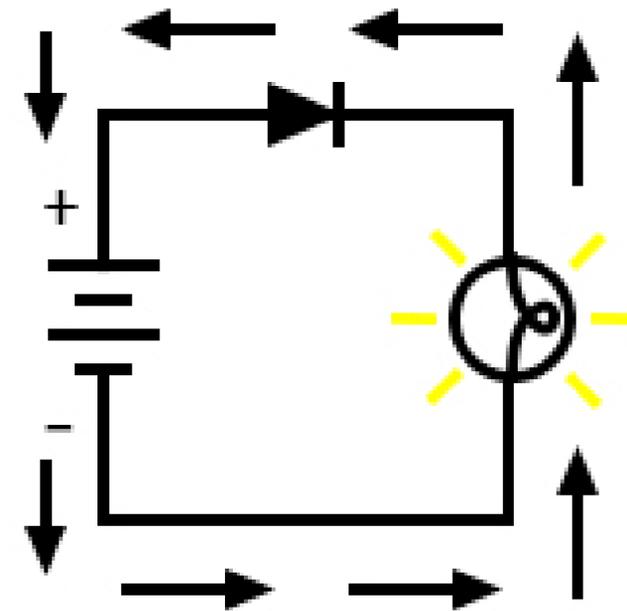

Lab Time Multimeter

Lab Time Breadboard

Current shown using conventional flow notation

Current shown using electron flow notation

Ohm's Law

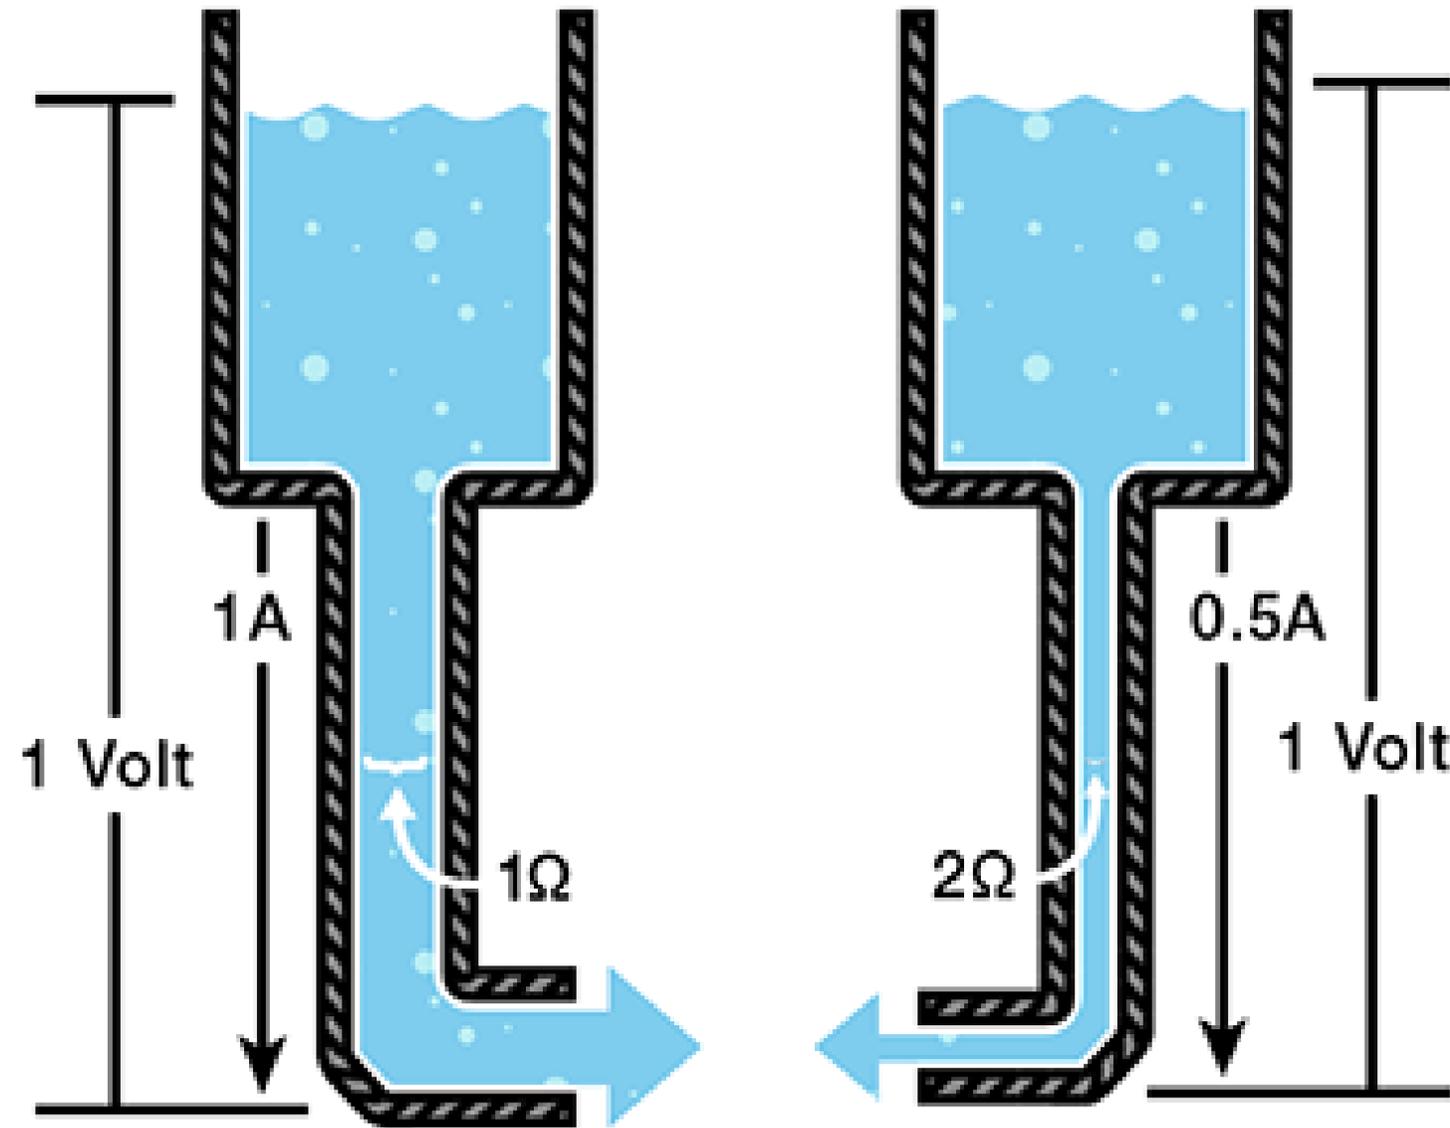

$$V = I * R$$

$$I = V / R$$

$$R = V / I$$

Ohm's Law

$$V = I * R$$

$$1V = 0.5A * 2\Omega$$

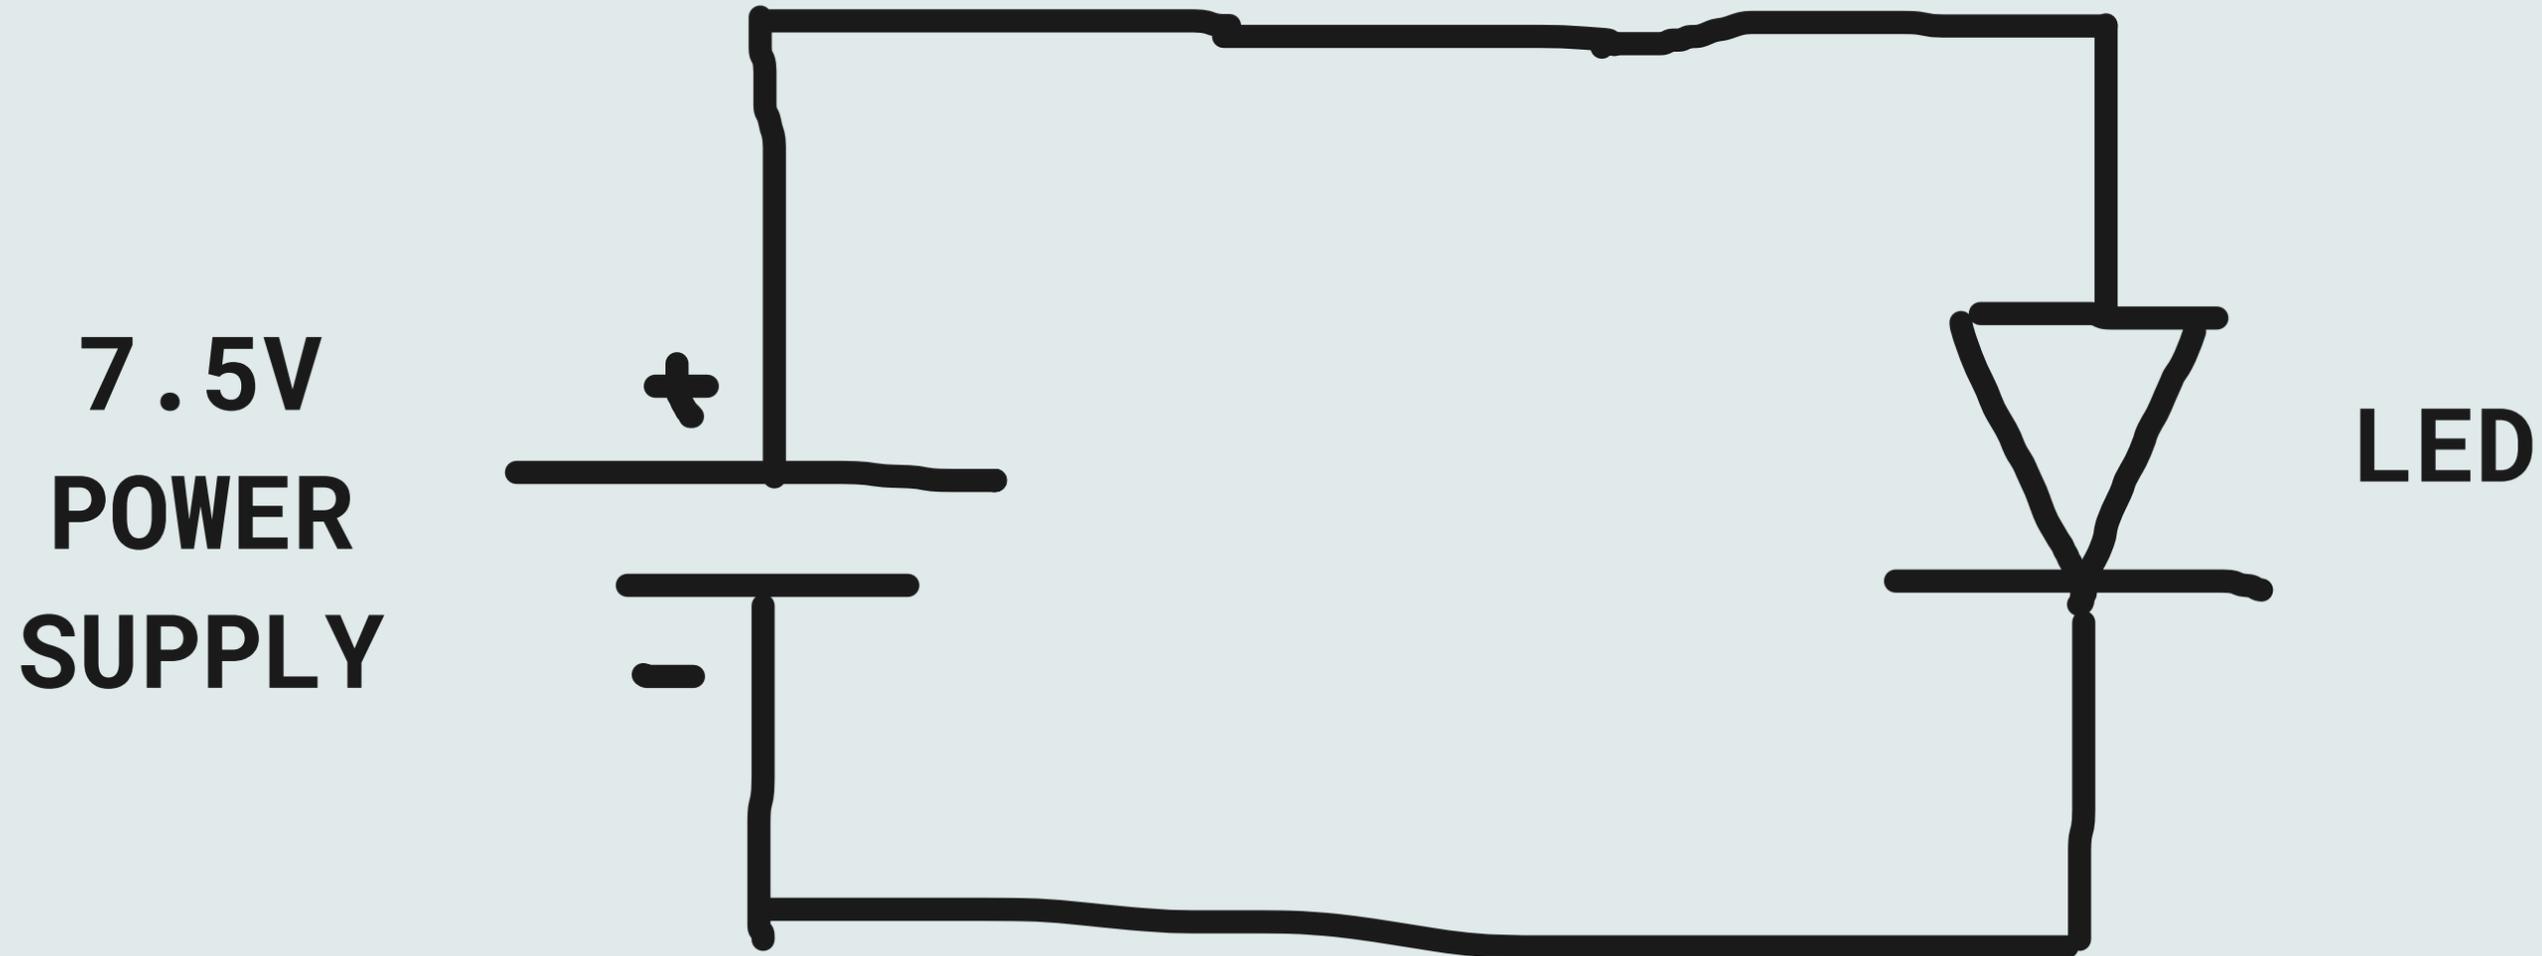

$$I = V / R$$

$$0.5A = 1V / 2\Omega$$

$$R = V / I$$

$$2\Omega = 1V / 0.5A$$

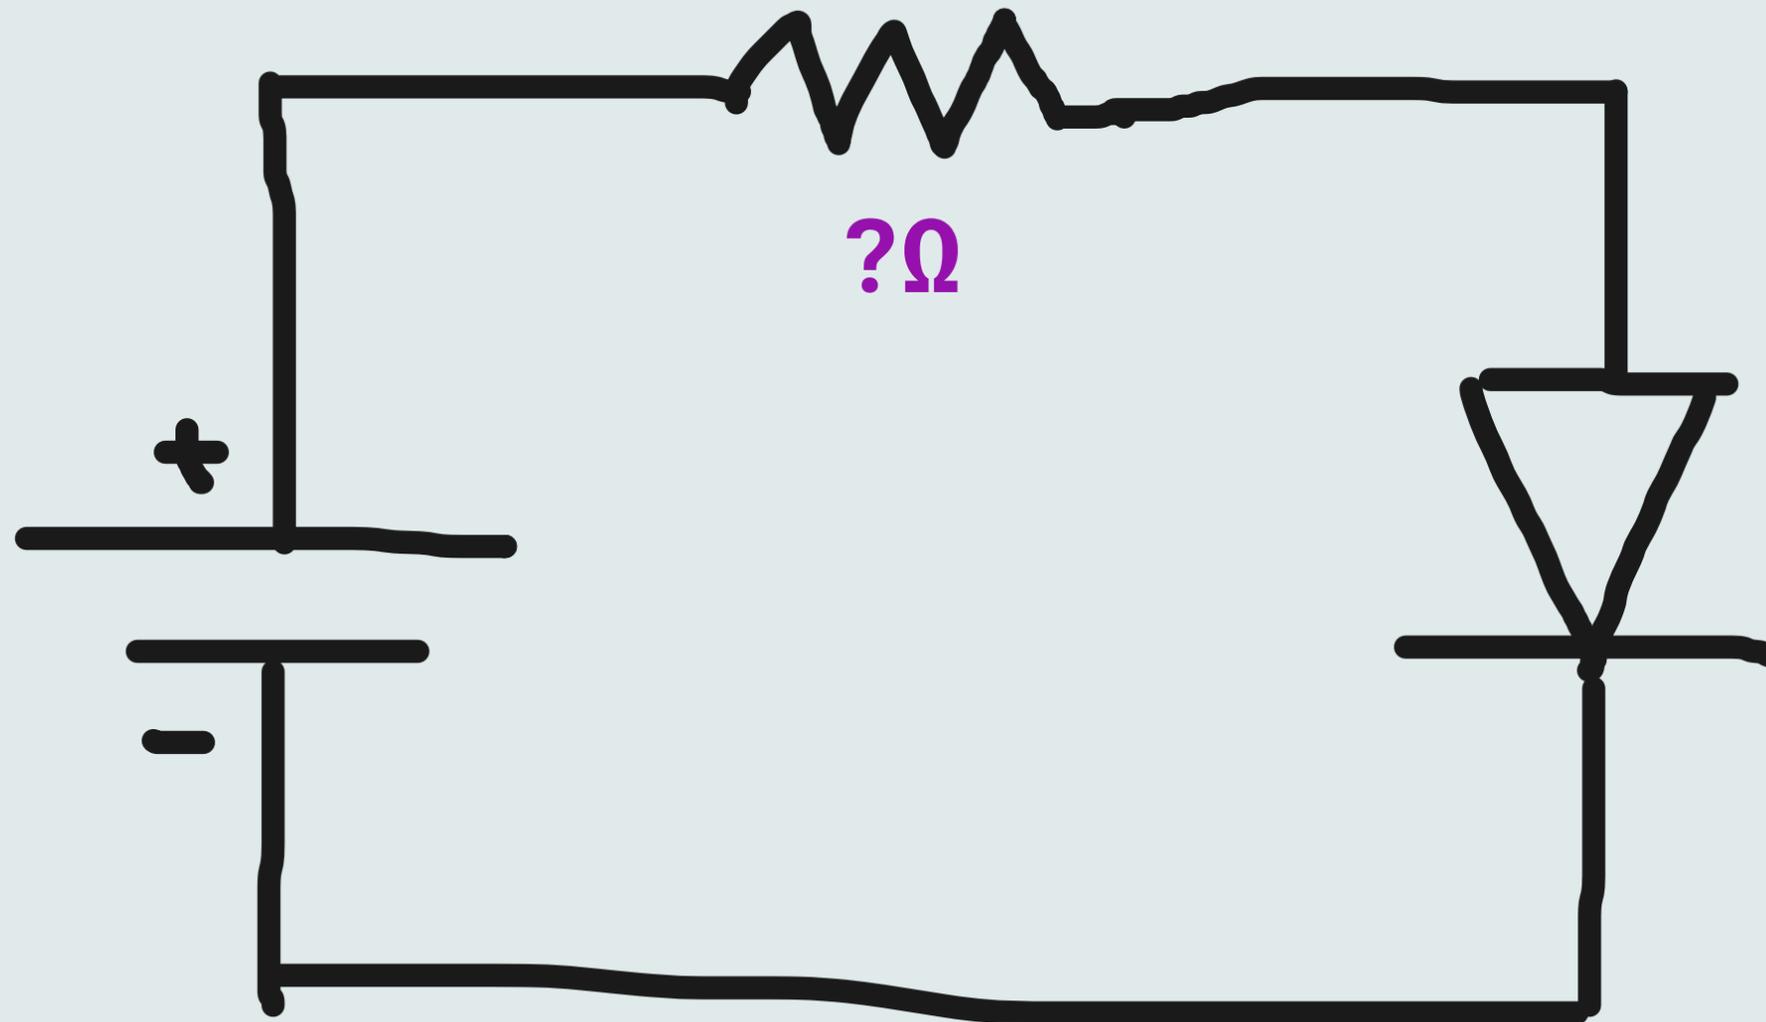

If we would do this, the LED would burn very brightly for a few seconds and then most likely break

LEDs can only handle a certain amount of current. You need to add some resistance to the circuit to reduce the current.

RESISTOR

7.5V
POWER
SUPPLY

LED

Forward voltage: 2.1V
Forward current: 20mA

 uk.farnell.com

**MCL293BD - LED,
Amber, Through Hole,
5mm x 5mm, 20 mA, 2.1
V, 606 nm**

The Company operates a 21 days return policy. To be accepted for return on this basis, Goods should be returned for receipt by the Company within 21 days of despatch.

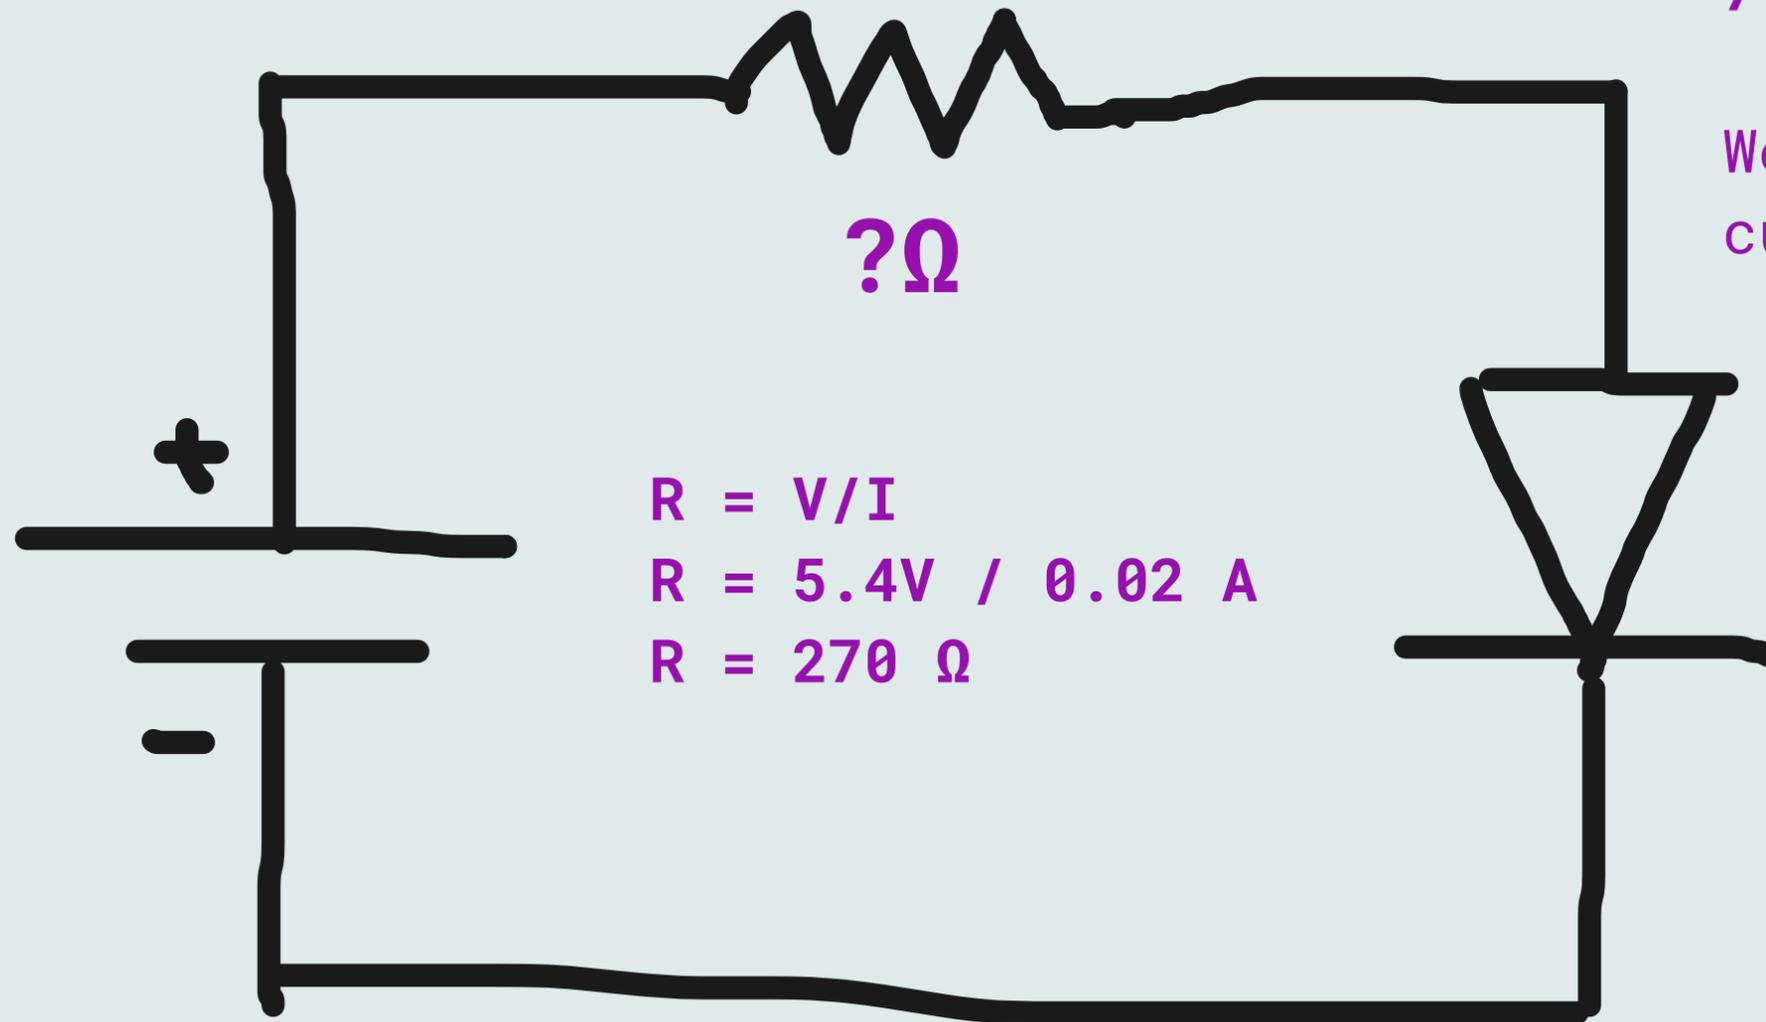

RESISTOR

The LED drops the voltage by the forward voltage amount

$$7.5V - 2.1V = 5.4V$$

We need to limit the current to 20mA (0.02A)

7.5V
POWER
SUPPLY

$$R = V/I$$
$$R = 5.4V / 0.02 A$$
$$R = 270 \Omega$$

LED

Forward voltage: 2.1V

Forward current: 20mA

ohmslawcalculator.com

Ohms Law Calculator

Simple to use Ohm's Law Calculator. Calculate Power, Current, Voltage or Resistance. Just enter 2 known values and the calculator will solve for the others.

ledcalculator.net

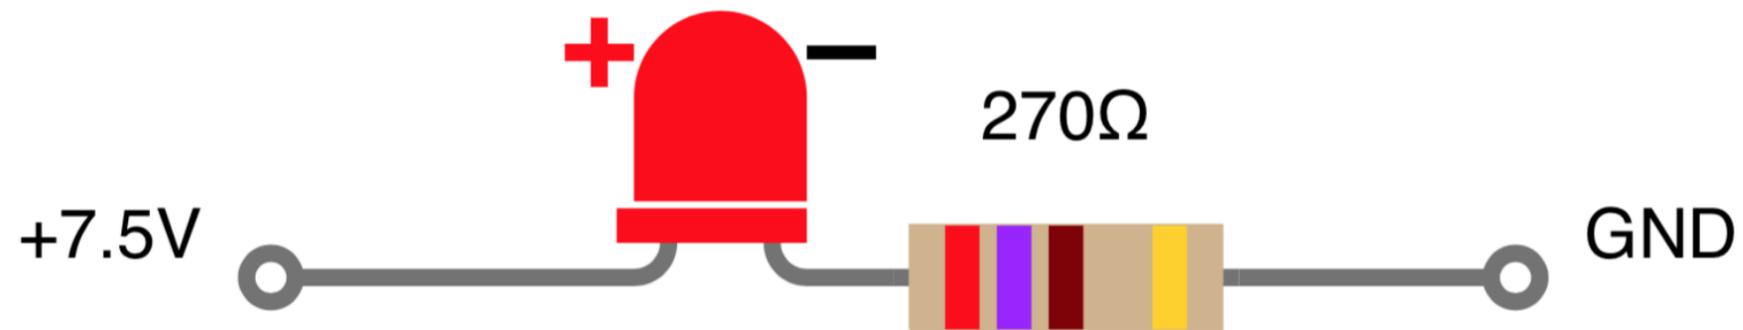

LED Calculator - Current limiting resistor calculator for LED arrays

This LED calculator will help you calculate the resistor values you will need when designing a series/parallel LED array circuit.

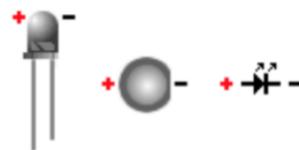

LED Calculator

ledcalculator.net

- Power supply voltage (V): 7.5
 - LED voltage drop (V): 2.1
 - LED current rating (mA): 20
 - Number of LEDs: 1

- You will need 1 x 270 ohm 1/8 watt resistor.
- The 270 ohm resistor is color coded: Red, Violet, Brown, Gold.
 - Each 270 ohm resistor consumes 108 milliwatt.
 - Total power consumed by the resistors is 108 milliwatt.
 - Total power consumed by the LEDs is 42 milliwatt.
 - Total power consumed by the circuit is 150 milliwatt.
 - Total current drawn by the circuit is 20 milliampere.
- The resistor values are calculated based on the common $\pm 5\%$ tolerance resistors.
 - Make sure to wire the LEDs in the correct direction as shown below.
 - Always leave some space for the resistors to breathe. They might get hot.
