

CHEM-E4130: CHEMISTRY OF ELEMENTS

Exam: Tuesday Oct. 18th, 2021, at 9.00-12.00, in Lecture Hall Ke2

SOME INSTRUCTIONS

There will be five questions (most of them consisting of several sub-questions), each evaluated in the scale 0-10 points. The questions are planned so that they would test your understanding. Answers to each sub-question are typically no longer than one or two sentences. Some of the questions may require some simple “drawings”. You will be given the Periodic Table, and you may also need to use a calculator for some simple calculations. Otherwise no additional tools/information should be needed.

The questions are based on the lectures given, lecture slides, lecture exercises, student seminars and seminar slides.

Please let me know already beforehand if there is anything unclear for you.

Best wishes,

Maarit Karppinen
