

From water purification plants to breweries to bioenergy power stations, almost every factory has pipes. Every pipe needs a valve. Every valve needs a positioner to control the valve position and to monitor its' condition.

Properly working valves help factories minimize waste and minimize their environmental impact, and help them operate safely. Leaks and malfunctions waste energy, waste resources and, for the business, they also waste money.

Check up on a factory from your phone

The challenge

Metso delivers 80,000 valve positioners every year. We'd like fresh new ideas to help our customers get the most from their valves and their processes with wireless communication.

What we're looking for

- New and fresh ideas for industrial valve customers
- A Bluetooth app for the Metso NDX® valve positioner
- Good app UI and UX
- A clearly defined business case
- A working mobile app prototype demonstrating the business case

Valuable team skills and qualities

- Open-minded and curious
- Business
- UX design
- UI design
- Software
