

# Real time information of the catch for the fisher

Fresh ideas required to make fishing more profitable

The pontoon trap of durable Dyneema netting protects the valuable catch against seal attacks. This widely along the coast used fishing gear construction with a leader and wings guides fish towards the chamber.

- + Minimized visits to distant trap-nets out at sea to save gasoline
- + Information sharing preferably with mobile app

Working prototype of the solution to be presented to key fishermen

When entering the last chamber fish swim through the small gate frame. That allows real time sensors/cameras/IoT solutions in order to measure the number of fish and different species caught.

Pontoon trap gate (40 x 40 cm)
