

Exam instructions for CHEM-C1230 - Principles of Physical Chemistry, autumn 2020

The exam is a home exam. You will get the questions on given time and you will have 3.5 h to return the exam to MyCourses. The exam time is 3 h and 0.5 h is for returning the questions.

The filename (or files) need to have **your name** in it. Your name and student number should be in the file too. Most common file types, like .doc .pdf are OK. The answers can be hand written and scanned but pay attention of the clarity of the output file. Photographs can be of poor quality or the files can very large so try avoiding them. If possible, send a single file.

If you return multiple files, your name should be in **all of them** and there should be a number to separate the files. Your name and student number should be in the file too.

You can used any material you find but do not copy it directly to the answers. The points will be reduced if I find direct copy form e.g. Wikipedia or from the textbook. You need to answer to the equations with your own words. In numerical question, you need to provide some intermediated results. I need to know how you solved the problem.

You have to do the exam alone. No group work or help of other persons.

The exam **starts at 13:00, 22.10.2020**

The answers have to be submitted latest at 16:30. Note few persons have special permit to have longer exam time (that will end at 17:30). There will be a separated folder for them. **All folders are in the Home page.**

There will be new exams soon and the exercise points are taken into account for exams in this academic year.
