

Second Mid-review 24.11.

Please note! Mid-Review materials uploaded to MyCourses by Monday 23.11. by 20.00.

Prepare one pdf-file containing the following material:

illustrated relation to the surroundings 1:2000 (forest, swamps, buildings, roads)

illustrated site plan 1:500 (vegetation, different surfaces, shadow etc.)

plans, sections 1:200

elevations 1:200

zoomed drawings of one accommodation unit

perspective views with materials presented (arrival to the site, lobby/ restaurant, accommodation unit)

scale model photos or renderings

additional material, concept models & such

+ the following diagram:

Sustainability concept diagram of your project

Analyze your project from the perspective of sustainability and present at least the following points clearly:

- use of land area for building on site / areas left for vegetation
- flexibility and re-use possibilities of your design
- efficient use of built space
- material selection and its ecological sustainability
- energy consumption and possible design choices linked to it
- cultural sustainability (e.g. relation to the context, social functions, immaterial relationship with nature, possibility to affect people's lifestyle choices through the design)

These are complicated questions on some of which we have not had a lot of discussion during this course. The goal here is not to answer them perfectly but for this exercise to serve as a starting point for your own thinking and the conversation on your project during the review. So do not be alarmed if you cannot answer all of them, the important thing is to learn to reflect on our design choices in relation to sustainability goals whenever we work on an architectural project.

The review will be organized via zoom in two groups.
