

Powder pattern matching with Crystallography Open Database

Powder pattern matching with Crystallography Open Database

- COD (<http://www.crystallography.net/cod/>) has a large set of crystal structures
- Powder patterns have been simulated for all crystal structures and collected into a database that can be used for pattern matching and phase identification
- Has been integrated in some commercial programs (Rigaku, PANalytical, Match!) and with free QualX2 program (<http://www.ba.ic.cnr.it/softwareic/qualx/>)
- Full Profile Search Match web service is available at <http://nanoair.dii.unitn.it:8080/sfpm/>

Example with ZnO (1)

- Let's try the Full Profile Search Match web service with ZnO as an example
 - Download Powder XRD data ZnO-test.xy located in MyCourses -> Databases -> Full Profile Search Match (Powder COD)

Diffraction pattern and sample characteristics

Upload diffraction pattern: 2107059.xy

Structures db: mineral inorganic organic metalorganic other

Atomic elements in the sample:
Zn O

Threshold phase density: Threshold remove: Phases maximum number:

Crystallisation: Cell parameters isotropic expansion/contraction

Experiment details

Radiation:
 X-ray tube:

Instrument geometry:
 Bragg-Brentano (theta-2theta)
 Bragg-Brentano (2theta only), omega:
 Debye-Scherrer
 Transmission

Instrument broadening function:

Algorithm options (Rietveld, ddm or both)

Weights type: Smooth weight: 1st weight: 2nd weight:

1. Select both *mineral* and *inorganic*

2. Limit elements

3. Increase density threshold to 2 g/cm³

4. Limit the number of phases to 4 or less

5. Try *medium* broadening first. If this does not give reasonable matches, try *high* broadening

Example with ZnO (2)

- The search will match with ZnO. You may sometimes get unreasonable matches with small contributions (few weight %). You can typically disregard those.

Found phases and quantification:

Phase COD ID	cif file	name	vol. (%)	wt. (%)	crystallites (Å)	microstrain
2107059	2107059.cif	Zn O	76.5139	76.0044	1732.63	0.000535982
2300115	2300115.cif	zinc_oxide	21.792	22.4323	189.295	0.008175
1011259	1011259.cif	Zincite	1.69413	1.56329	825.776	0.018767
