# TODAY

HOW TO USE DATA  
COLLECTED FROM PEOPLE?

# PROGRAMME OF TODAY

## Lectures

10.15-11.45

Marketta Kyttä: Knowledge from people in urban planning & design

Tiina Laatikainen: Preparation of PPGIS data for analysis

LUNCH

12.30-14.00

Kamyar Hasanzadeh: Various levels of PPGIS data analysis

Marketta Kyttä: The online and onsite analysis of PPGIS data

# SECOND GROUP WORK STARTS

Formation of new, smaller groups

KNOWLEDGE FROM  
PEOPLE IN  
URBAN PLANNING &  
DESIGN

# Traditional ways to gather knowledge from people

Public  
hearings

Interviews

Surveys

Observations

# CRITERIA FOR GOOD LIVING ENVIRONMENT?

**Sense of  
community**

**Safe**

**Close to nature**

**Peaceful**

**Dog friendly**

**Cozy**

# PLACE-BASED PERSON-ENVIRONMENT RESEARCH

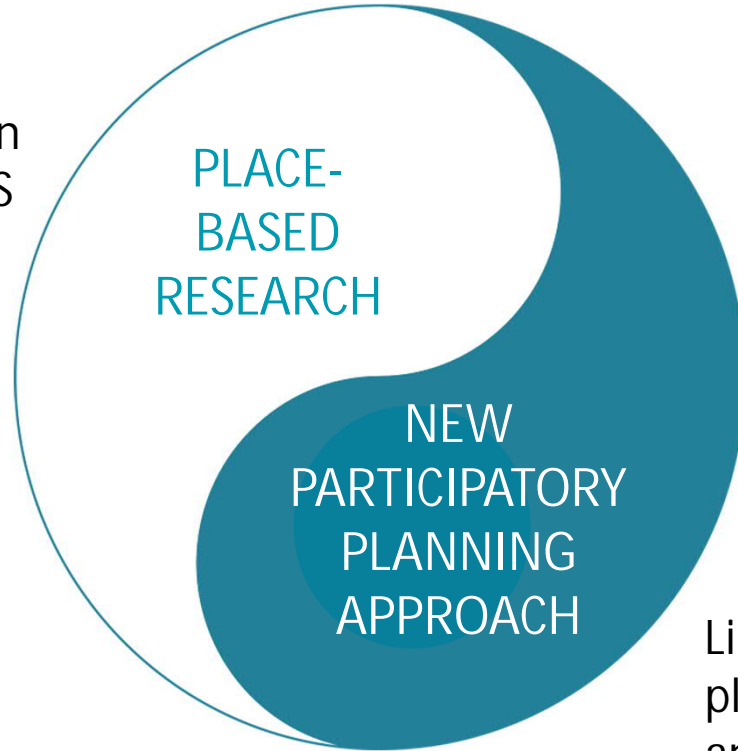

SoftGIS  
knowledge  
layers

HardGIS  
knowledge  
layers

# WHY "SOFTGIS" KNOWLEDGE?

The analysis of "soft" geographical information together with "hard" GIS knowledge

Linking the user knowledge to planning and design solutions and making large-scale participation possible

# Professor Gregory Brown

# New website!

## Our Vision and Mission

Our vision is to establish a global network of researchers and practitioners committed to moving beyond the state-of-the-art in public participation and participatory mapping systems.

We will achieve this vision by scientifically advancing the next generation of participatory mapping techniques to support meaningful public participation, and the inclusion of multiple values in decision-making across the globe. We also support teaching and planning excellence with respect to the design, application and evaluation of public participation and participatory mapping systems globally.

APPLICATIONS

## Honouring the participatory mapping contributions and enduring legacy of Professor Gregory G. Brown

Christopher M. Raymond<sup>a,b,c,d,\*</sup>, Nora Fagerholm<sup>e</sup>, Marketta Kyttä<sup>f</sup>

This commentary honours the seminal and foundational contributions of Professor Gregory G. (Greg) Brown to the fields of public participation geographic information systems (PPGIS), natural resource management and spatial planning.

We synthesise his work into four theses that underpinned his three decades of research: 1) The mapping of place values provides place-specific information about sense of place which can aid in the assessment of the risks associated with landscape modification; 2) PPGIS analysis techniques can support socially acceptable and scientifically defensible land-use decisions in multiple planning contexts; 3) Issues of representation and data quality can be systematically investigated and managed; and 4) While PPGIS is increasingly being applied by cities and other organisations globally, there remains multiple challenges regarding the use of PPGIS findings in land-use decision making. We then briefly summarise his future visions for PPGIS research into: improving participation, and identifying and controlling threats to spatial data quality; turning PPGIS from a participation tool to a political force that can engage with the politics of place and, related to the previous vision; building capacity and champions for those who see the value in participatory mapping methods and are willing to articulate publicly how participatory contributions will be used. The co-authors and all signatories to this commentary are deeply grateful for the many ways that Greg has touched our lives over the years.

He will be sadly missed.

### 1. Introduction

Professor Gregory G. (Greg) Brown's contributions to public participation geographic information systems (PPGIS), natural resource management and spatial planning have been foundational. Over three decades, he and his network led the rapid growth of participatory mapping studies globally (four publications per year in 1997 to over 30 per year in 2019, Scopus). He wrote multiple seminal works relating to the mapping of place values (the values assigned by individuals to places, including residents and visitors) to guide natural resource

AND ANALYSIS  
OF PLACE-BASED  
KNOWLEDGE

# PUBLIC PARTICIPATION GIS (PPGIS) DATA: VARIOUS LEVELS OF USER KNOWLEDGE

## BACKGROUND INFORMATION

- Age
- Gender
- Tenure
- Education
- Income
- Etc.

1

General knowledge about individual preferences, lifestyles, attitudes or values

2

Place-based knowledge about:

- individual preferences, attitudes or values
- individual behavior, lifestyles and everyday practices
- environmental phenomenon and problems (citizen science)

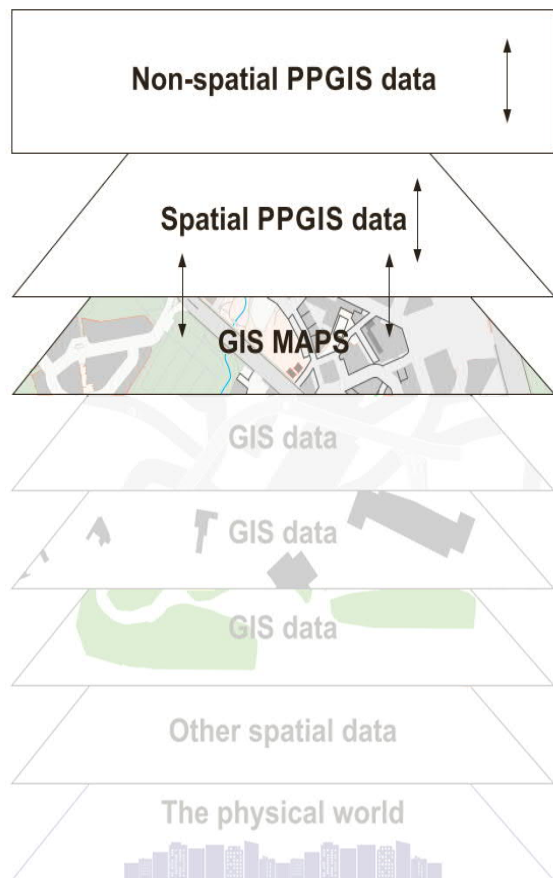

3

Place-based knowledge about individual future wishes, visions and preferences

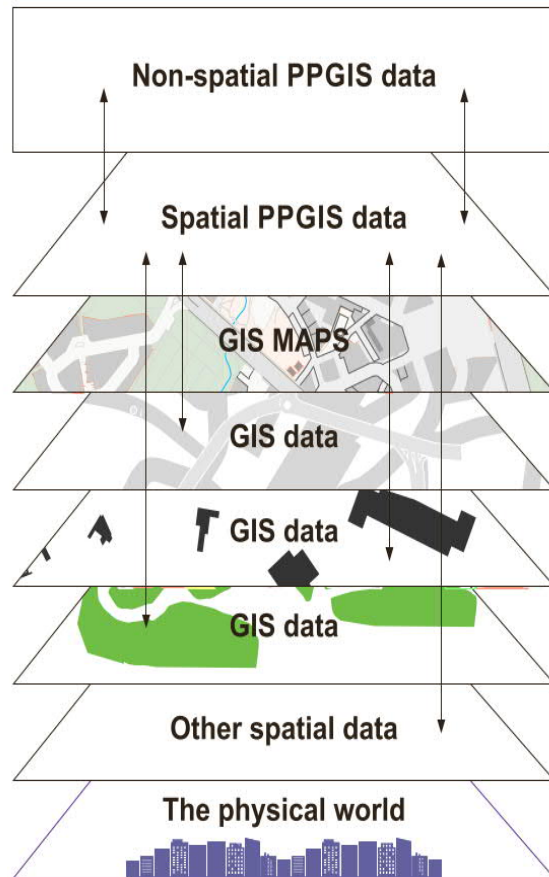

## OUTCOME VARIABLES

- Neighbourhood satisfaction
- Quality of Life
- Perceived Health
- Happiness
- Etc.
