

Strategy Process

Lecture 2: Bounded rationality and process choices

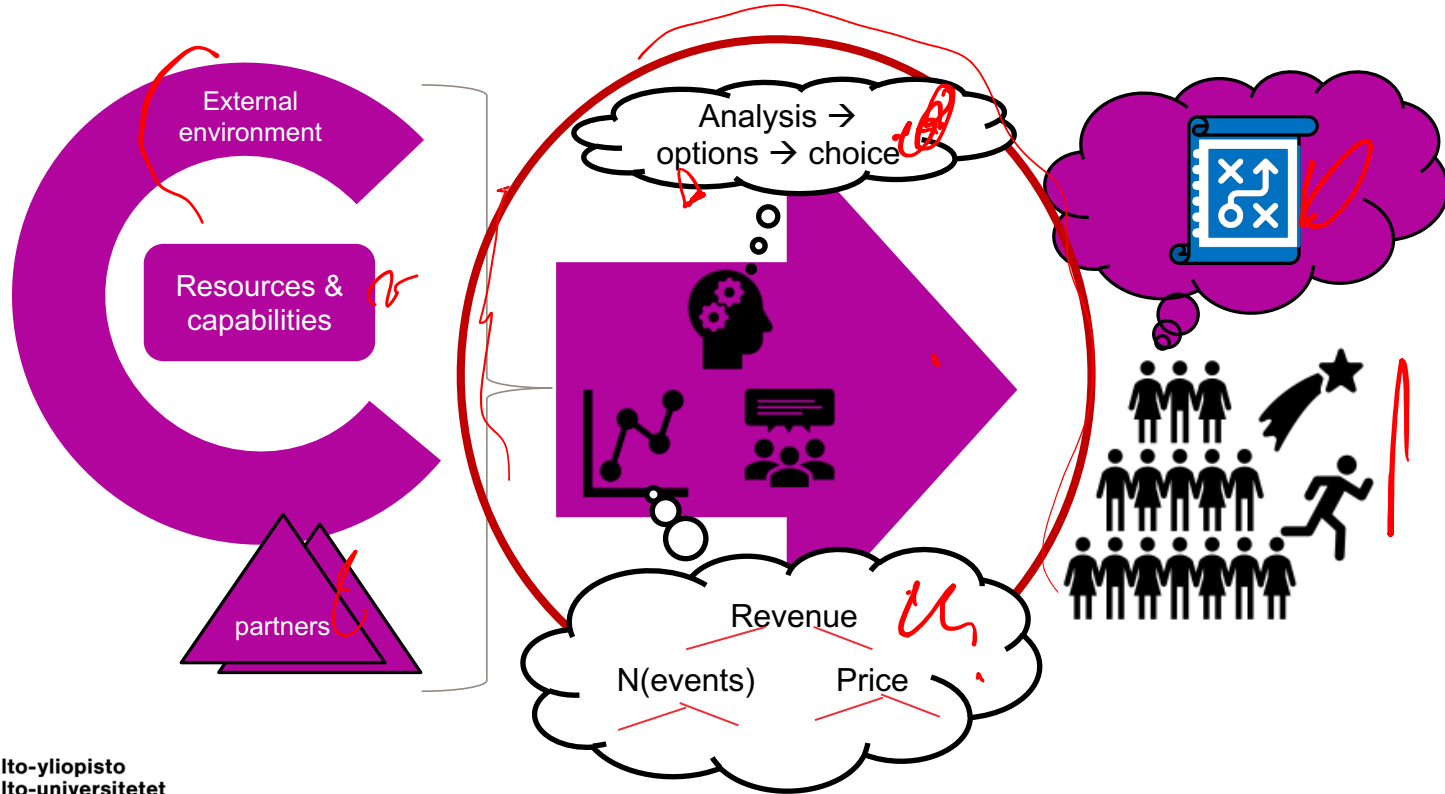

Aalto-yliopisto
Aalto-universitetet
Aalto University

Timo Vuori

03/2021

Recap of first lecture

Speak up before you feel confident!

Key concepts

- human: limited
• capacity
• info
• time

What does **bounded rationality** mean?

What does **satisficing search** mean?

Examples from your own experience?

based on risk
• satisficing dec.

Good enough
- > suboptimal

• sequential
• minimum criteria
• arbitration level

5 min in small groups

Options reach higher

Simple rules

1. Create at least nine options before choosing
2. Spend at least three weeks to generate new options
3. Double the aspiration level (satisfying level)

Techniques for creating options

Inside-out: start from your strengths

Outside-it: start from market trends and opportunities

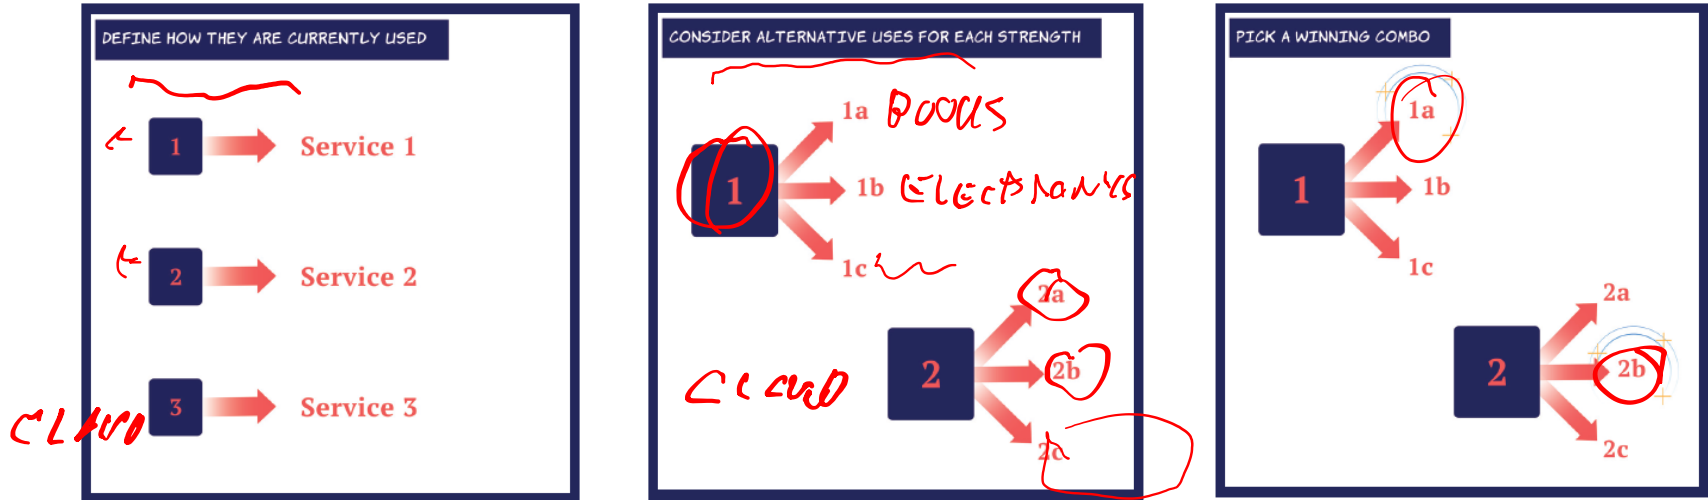

What if we acquired: imagine you would buy company X
– what would your business then look like?

Analogies: imagine you did something similar another company has done in another industry

Inside-out out: start from your strengths

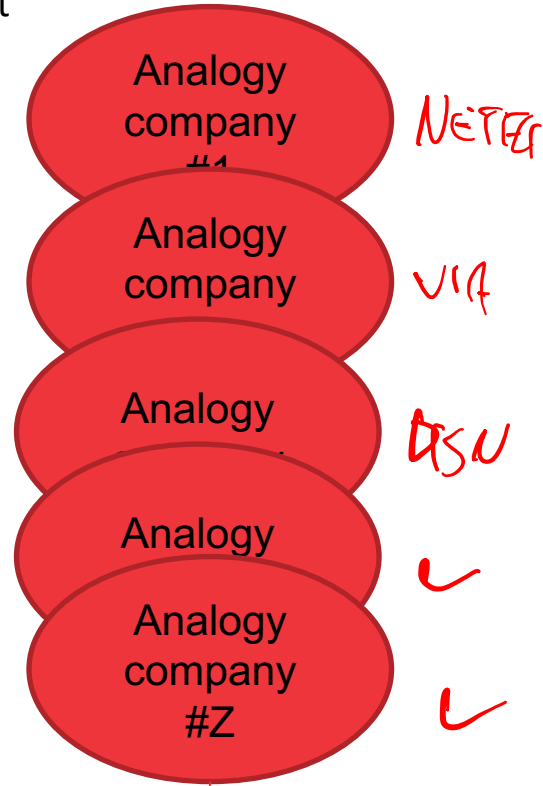

Analogies

1. Reflect what are the key forces driving or enabling change in your current situation?

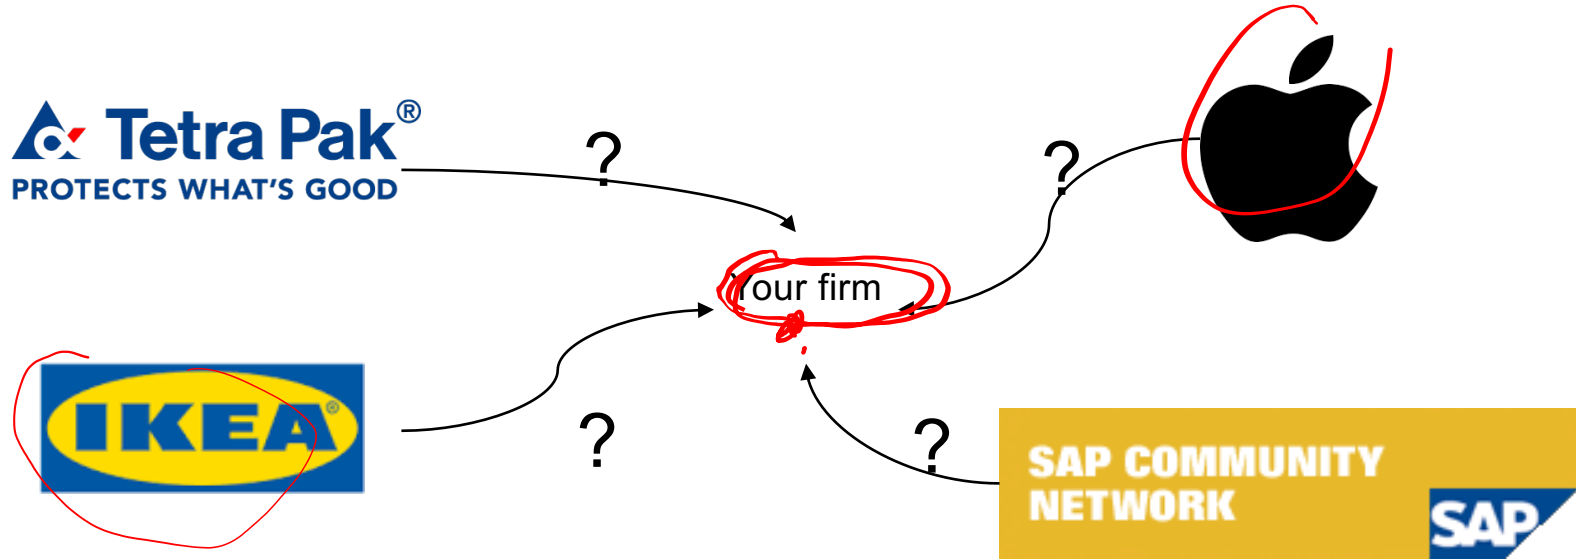

2. List companies that have succeeded in analogical situations

3. Think what would be the best solution from the analogies and apply it to your current situation

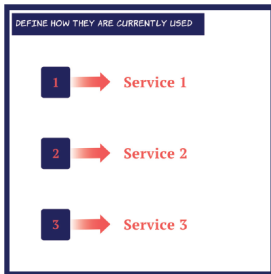

Analogies, continued

Create strategic options for your favorite company

Inside-out

- Choose one unique-ish strength your company has
- How is your company currently leveraging the strength?
- What other value could your company generate with the strength?
- What vision could be created from that?

Analogies

- Select a company from an unrelated industry
- What is the radical move or unique business model the company has?
- What would it look like if your company did the same?
- What vision could be created from that?

10 min in small groups

Key concepts, continued

What is a **cognitive representation** in the business context?

Why do we need them?

How do they influence choices?

Personal example?

also feeling or emotions

- Forward-looking

- Making

BIAS

- enable seeing more

- focus past

5 min in small groups

Cognitive representations

Apparatus used in preliminary training

FIG. 15

(From E. C. Tolman, B. F. Ritchie and D. Kalish, Studies in spatial learning. I. Orientation and the short-cut. *J. exp. Psychol.*, 1946, 36, p. 16.)

Apparatus used in the test trial

FIG. 16

(From E. C. Tolman, B. F. Ritchie and D. Kalish, Studies in spatial learning. I. Orientation and short-cut. *J. exp. Psychol.*, 1946, 36, p. 17.)

ASS-U-ME

Explicating your mental model

Identify key variables in your mental model

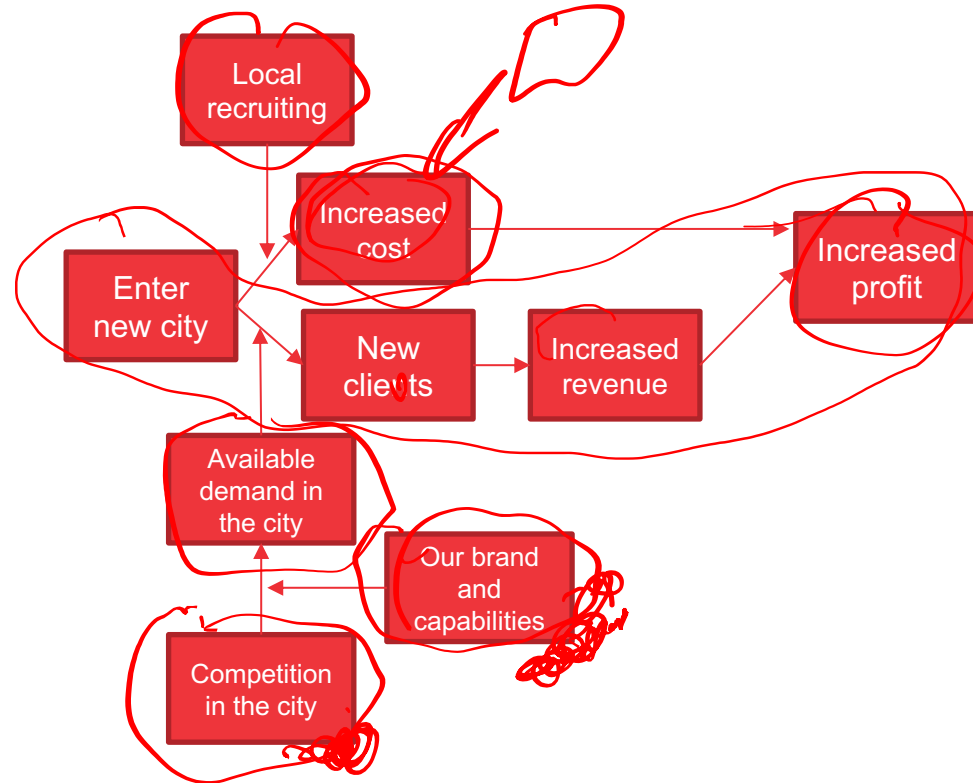

- Actions you are going to take
- Immediate consequences of the actions
- Consequences of the consequences
- Ultimate outcomes
- Factors that shape the relationship between actions and consequences, and the factors behind them

Example of mental model (1)

Identify key variables in your mental model

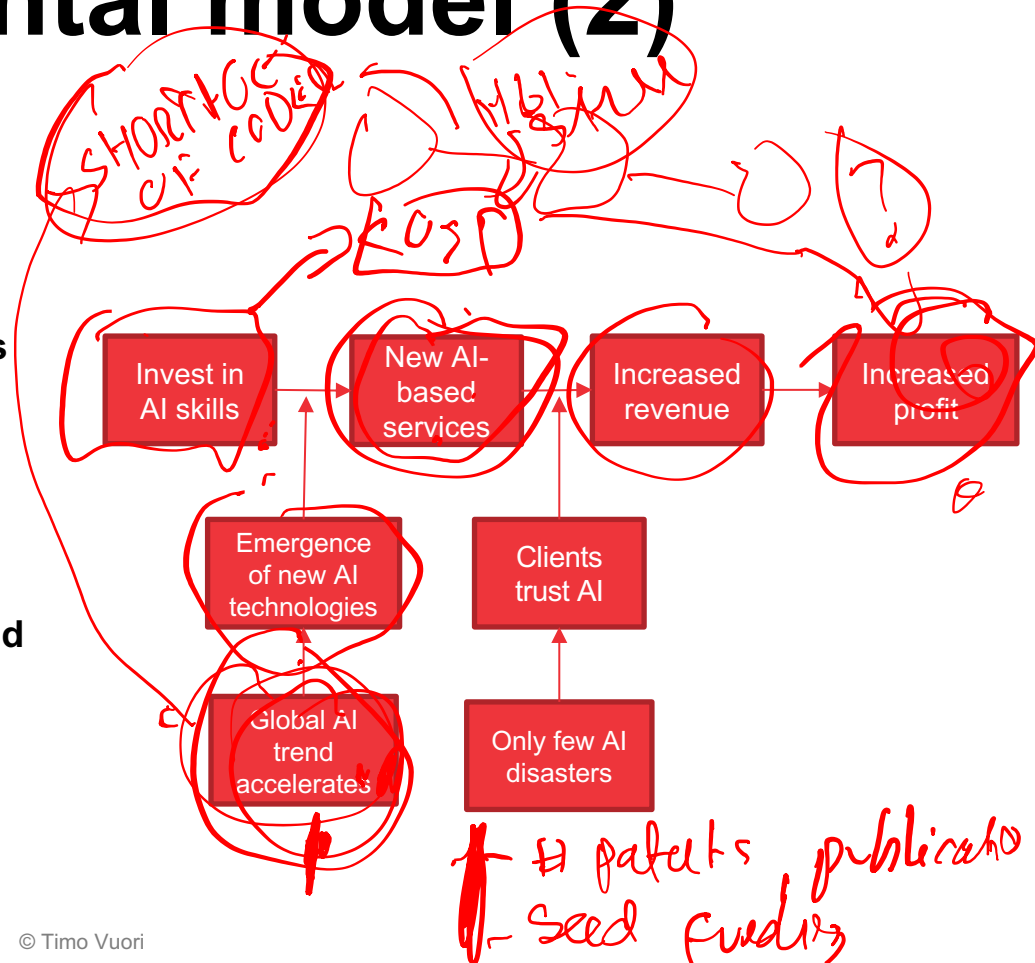

- Actions you are going to take
- Immediate consequences of the actions
- Consequences of the consequences
- Ultimate outcomes
- Factors that shape the relationship between actions and consequences, and the factors behind them

Example of mental model (2)

Identify key variables in your mental model

- Actions you are going to take
- Immediate consequences of the actions
- Consequences of the consequences
- Ultimate outcomes
- Factors that shape the relationship between actions and consequences, and the factors behind them

Draw mental model of your strategic option

PreMortem exercise to identify critical assumptions

- Imagine it's year 2030
- Your firm has gone bankrupt
- What has happened? Describe as realistic a scenario as possible
- What assumptions should you add to your mental model?

Measure your critical assumptions

- Test and validate your assumptions with data
- Identify key variables / proxies
- Identify feasible data sources
- Determine threshold values in advance
- Continuous process

Test your critical assumptions

- Not just analyzing reality passively, but also testing ideas and assumptions through pilots
 - Contextual factors shape action-outcome relationships
 - Not enough data about new things
- Measuring outcomes
- Plan what are the next steps, as a function of the outcomes
- Sufficiently high level of risk

Measure and test your assumptions

Select two key assumptions from your mental model

How could you measure each with data?

What experiment could you create to test them?

How would you interpret the results?

Key concepts, continued still

Under what conditions are cognitive presentations most likely to harm organizational search?

Failure example

Assignment for next week

If you want, you can return a PowerPoint presentation instead of an essay. It should have three slides and visualize the insights as much as possible

Read the articles to answer the questions below. Write a submission of 600 words (excluding the references, titles and subtitles). Late submissions will encounter a point reduction of 50% from otherwise on-time submitted corresponding version.

Answer to these following questions:

- o Why and how emotions can influence strategy making in organizations?
- o Give an example of a situation in which your emotions have influenced your choice. Why did you experience the emotion and how did it influence you?
- o What are the key elements in emotion regulation (ER)? Describe and analyze a situation in which someone has regulated your emotions.
- o How should one apply emotion regulation in an organizational setting?

Grading (max 15)

Goodness of explanation (3)

Example and explanation (3)

Definition of ER (1)

Elements of ER named (2)

Example and explanation (3)

Explanation (3)

Grammarly or some other app

CLARITY

Thank you!
