

TASK 04 presentation

LOVE TRIANGLES

(Ilkka, Emilia, Helena)

Where we left - different implementation ideas

Tube diameter 5 mm vs 10 mm

Tube diameter

- We tested 6, 8, 10 and 12 mm diameter tubes
- 6 and 8 mm were clearly too small
- 10 and 12 mm proved ok
- 12 mm fits almost double the wire amount of 10 mm

Prototyping

Prototyping

Prototyping

- Challenge: up to 12 pipes in one joint

Acrylic sheets

- Placing acrylic sheets in between the piece
- Uncertain where
- Drilling holes into the sheets and attaching them to the piece with loops

Tetractys

A mathematical
sculpture highlighting
geometrical properties
behind triangles and
tetrahedrons

Materials

- Aluminium tubes ($\emptyset 10-12$ mm)
- Steel wire
- Acrylic sheets

Material calculations

- Unit size depends on large tetrahedron size (a) and the number of levels (n)

$a = 800 \text{ mm}$
 $h = 653 \text{ mm}$

$a = 1000 \text{ mm}$
 $h = 816 \text{ mm}$

$a = 1200 \text{ mm}$
 $h = 980 \text{ mm}$

Material calculations

- Aluminium tube usage (roughly, joints not taken into account):

		a =	1 [m]		
Number of levels (n)	Tetrahedrons	Tube number	Tube length a/n [m]	Total tube amount [m]	
1	1	6	1,000	6,00	
2	4	24	0,500	12,00	
3	10	60	0,333	20,00	
4	20	120	0,250	30,00	
5	35	210	0,200	42,00	
6	56	336	0,167	56,00	
7	84	504	0,143	72,00	
8	120	720	0,125	90,00	

Material calculations

- 10 mm aluminium tube 2,60 €/m
- 12 mm aluminium tube 3,975 €/m
- Aluminium tube usage likely in the range of 40-60 m

-> 104-238 €

Alumiiniputki Eloksoitu 1 x 10 x
2000 mm

5²⁰

Budget

- Aluminium tube
 - Total amount = 40-60 m (estimated)
 - Price = 104-238 €
- Steel wire
 - Total amount = 20-30 kg (estimated)
 - Price = 100-150 €
- Acrylic sheets
 - Total amount = maximum of 1 m²
 - Price = ~ 90€

Total = ~500 €

Conclusions

- Some final decisions are still needed (colours, layers etc)
- More prototyping to determine the most efficient way to assemble the piece
