- the teaching methods were considered appropriate (75%).
- as the whole, the course was considered very good or excellent (63%).
- 88% of the respondents felt that they will benefit from the things learnt on the course.

In the verbal feedback the use of multimedia was valued.

Respond to feedback (Autumn 2015)

Thank you for the feedback received. The criticism concerned on lecture which could be made more interactive with class discussions and review of the previous lecture. This is one matter still to take into account. We will continue to develop teaching to find better teaching methods. Furthermore, more practice or visits were needed. That fact should be developed for instance with concrete visits to the element factory and construction site.
