## ECON-C4100 - Capstone: Econometrics I

Lecture 3: Review questions

Otto Toivanen

1/2

## Lecture 3

- What is the value of the coefficient of age in the regression of income on age?
- What can you say about the statistical significance of the age coefficient, and on what basis?
- What fraction of the variation in income does the univariate model explain (capture)?
- What is the difference between the correlation coefficient formula and that of the coefficient in a univariate regression?
- Solution
  Can the coefficient of a variable in a univariate regression have a different sign than the correlation between the variable in question and the dependent variable?
- **6** What value does the univariate model predict for income of people aged 20, 30, 40 and 50 years?
