

MAPPING YOUR WAT EXPERTISE

You are a diverse set of students with varying backgrounds and expertise. This diversity is definitely a strength, and we hope that you make active use of it during your studies.

This mapping provides you one way to consider your group's complementary expertise in the key aspects related to our WAT Master's Programme.

The mapping is based on three radar charts looking at selected themes, methods and contexts related to water and environmental engineering. Each of the three aspects has six key elements, reflecting the content of our WAT Master's Programme.

Map your joint expertise by **marking your individual symbols** to all six elements in each of the three radars, using scale from 0 to 3 as follows:

- **0 = I have no expertise on this element**
- **1 = I have minor expertise
(have gone through as part of some courses)**
- **2 = I have quite ok expertise
(have done one related course or equivalent)**
- **3 = I have good expertise
(have done several courses or used at work)**

The different elements can be defined in different ways: use the one that is most familiar to you. You can also clarify what you mean by each element. If you are not sure about your expertise in a certain element, mark it with a question mark.

Note that this is not test but is meant to provide as one discussion point for your group when getting to know each other. After completing the charts, discuss how your joint expertise looks like. You can also discuss how you plan to strengthen your expertise during your studies: do you e.g. plan to gain deeper expertise on themes you already know, or broaden your expertise on themes you don't yet master?

The charts help also to show others your joint expertise on these themes: kindly thus include the final charts into your Group Poster.
