

Aalto University
School of Arts, Design
and Architecture

From concept design to interaction design (IxD)

Week 4

MUO-E3055 Interaction Design (IxD)

Antti Salovaara

MyCourses frontpage > Slides > 04a From concept design to IxD.pdf

Contents of the day

Overview for the remaining weeks

Short snapshots:

- interaction design, design systems, prototyping tools

- Division of responsibilities within groups

Interaction design: basics

Design systems: basics

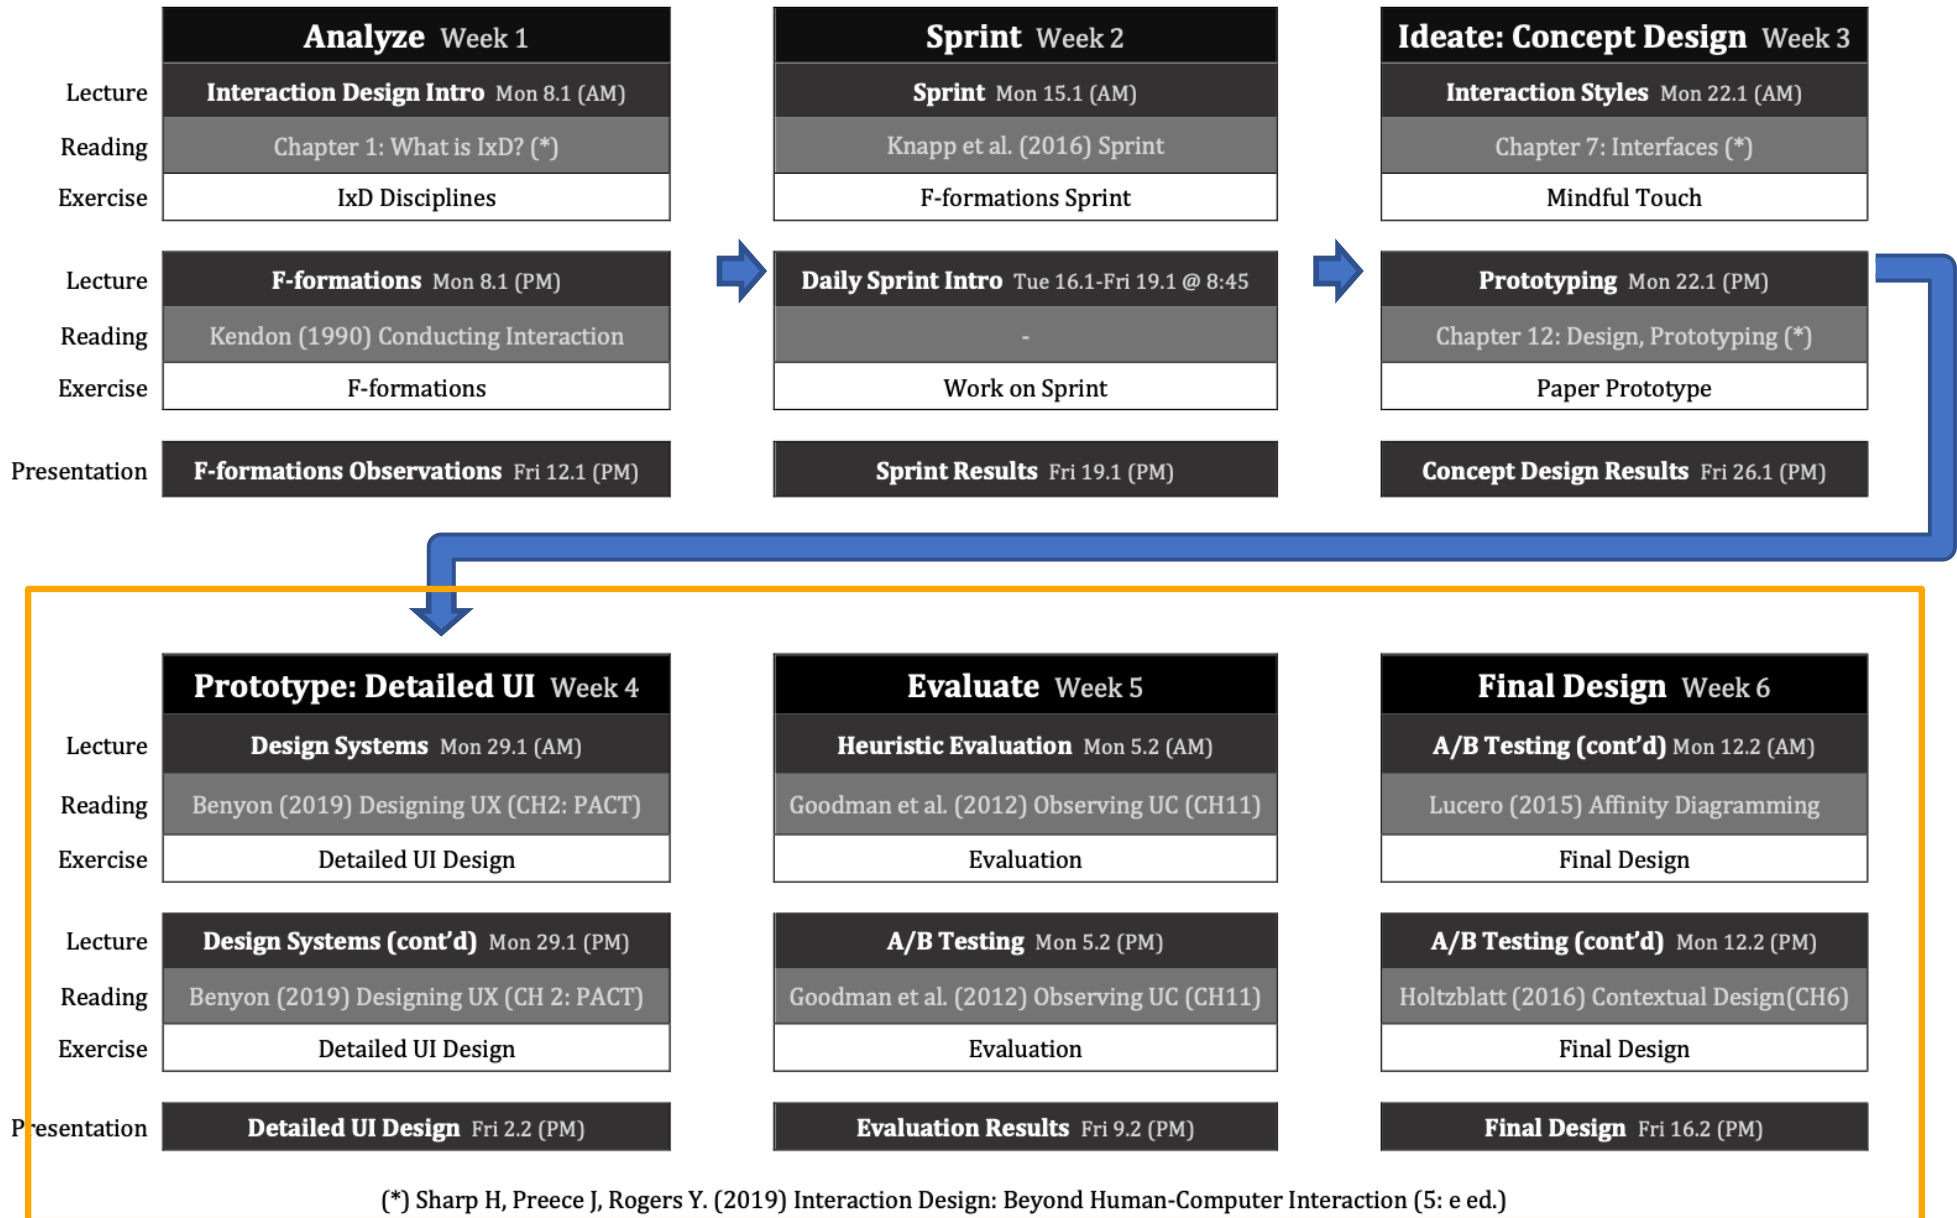

Reading material + quiz for Friday

Tutoring meeting instructions

Overview for the remaining weeks

Interaction Design (IxD) 2024 – Department of Design – Aalto University

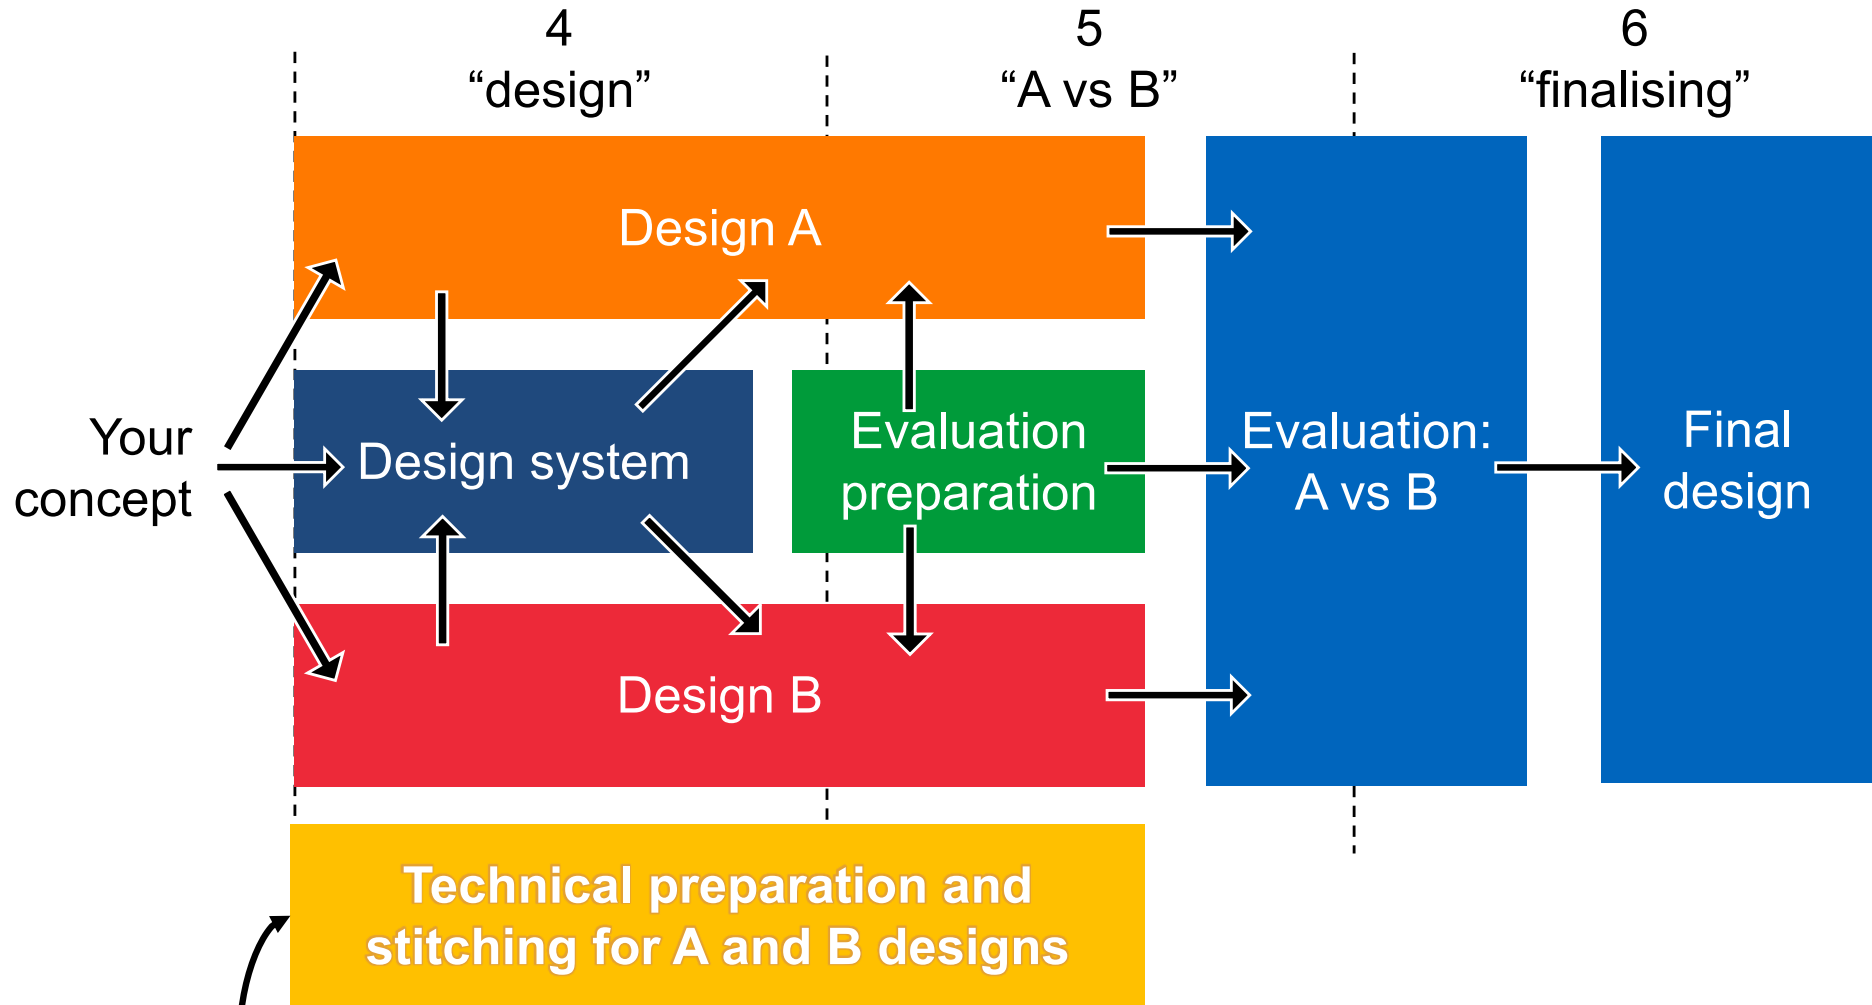

Weeks 2-7: Mondays (9.15-12.00 and 13:00-17:00), Fridays (13:00-17:00) and 16-19.1 (8:30-9:00) Room F102 (M202 on 19.1) @ Väre

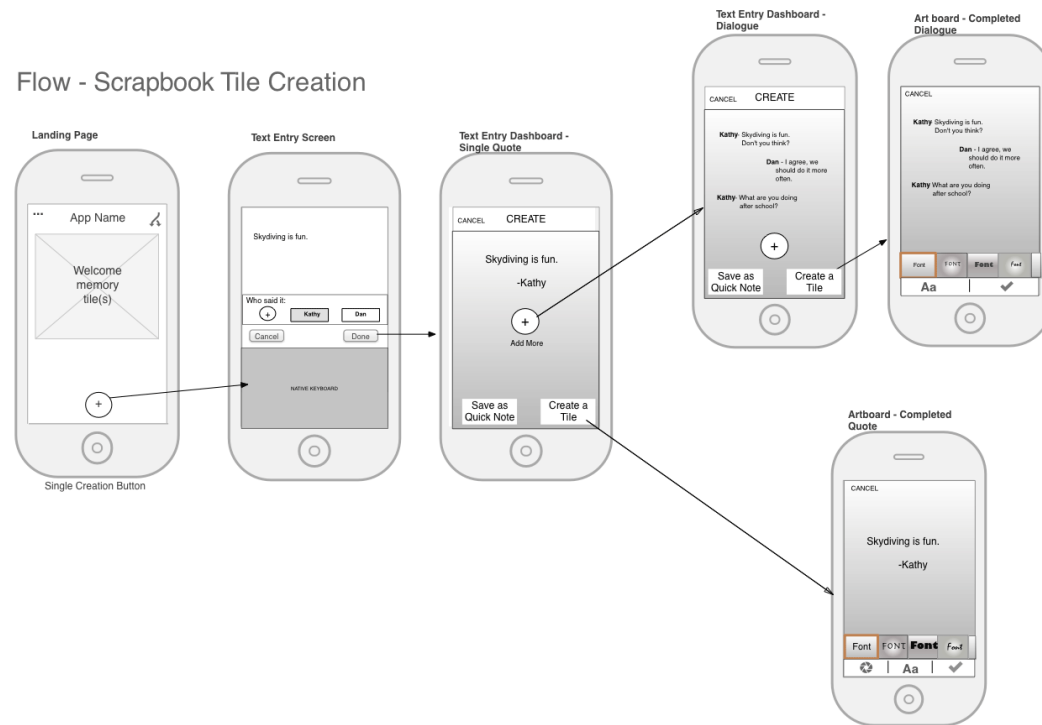

Sanders & Stappers (2008). Co-creation and the new landscapes of design. CoDesign, 4(1), 5--18.
<https://doi.org/10.1080/15710880701875068>

Weeks 4–6 in more detail

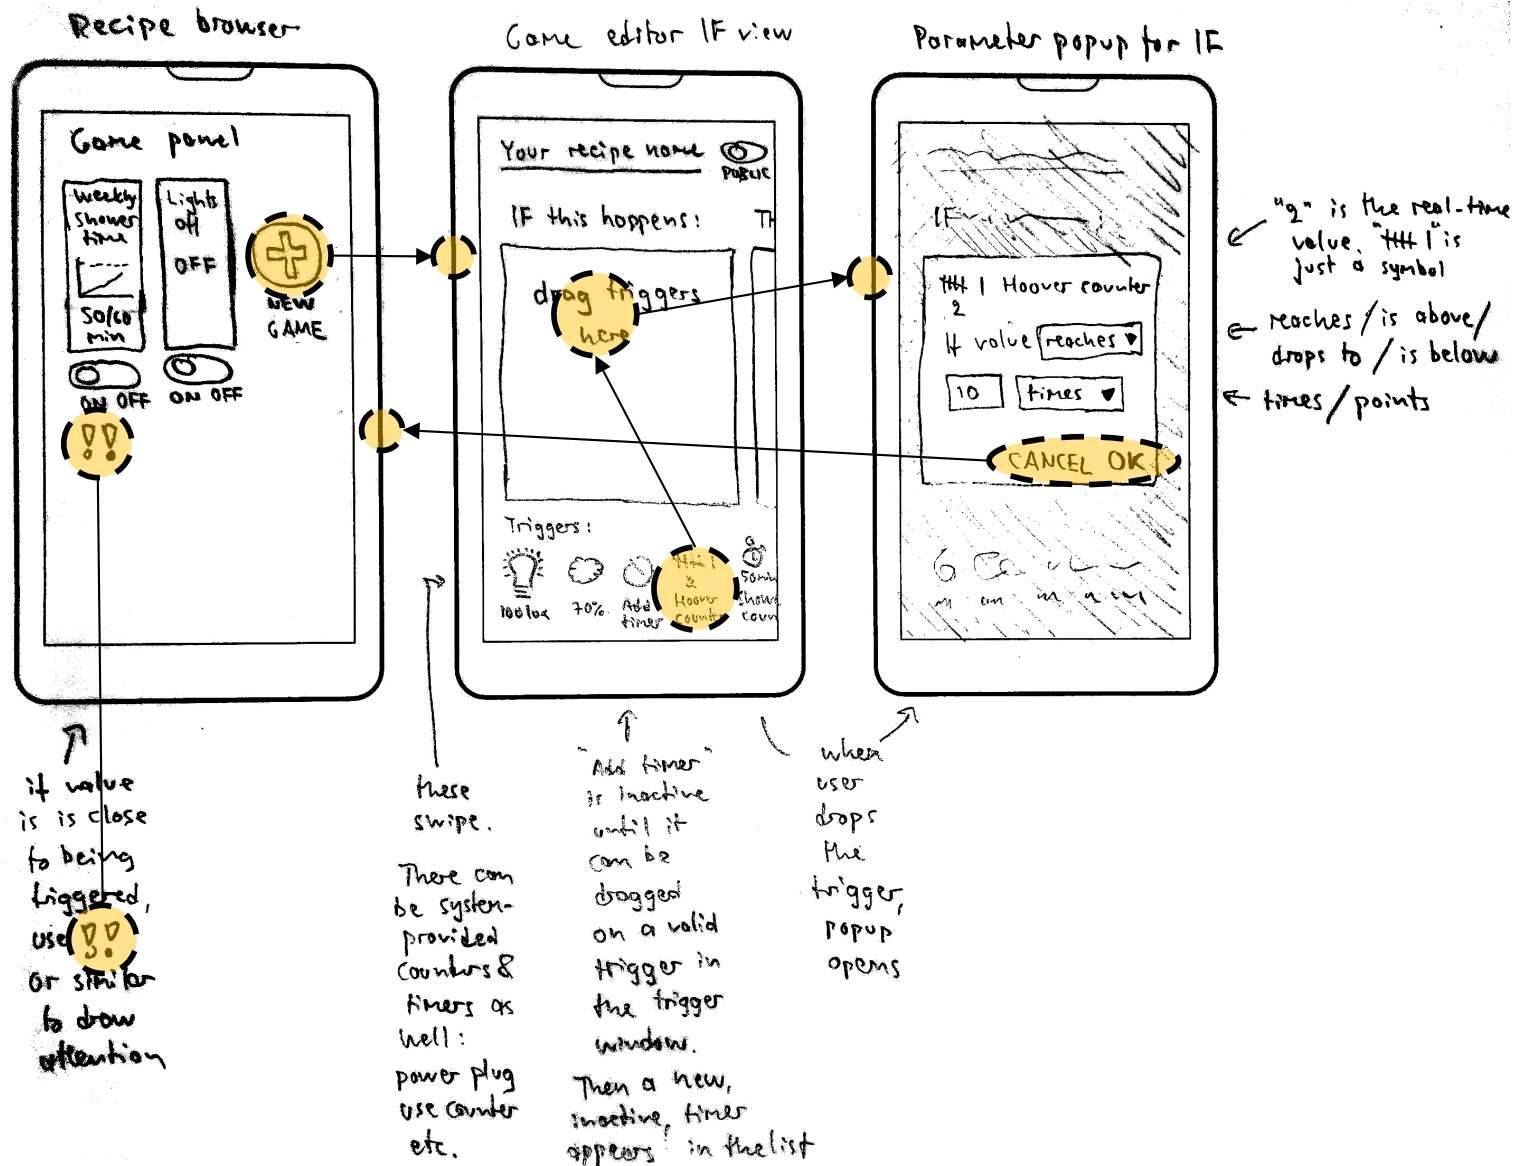

Roles can be divided also other ways, and there can be other roles too

Week 4 in interaction design: Wireflows for designs A and B

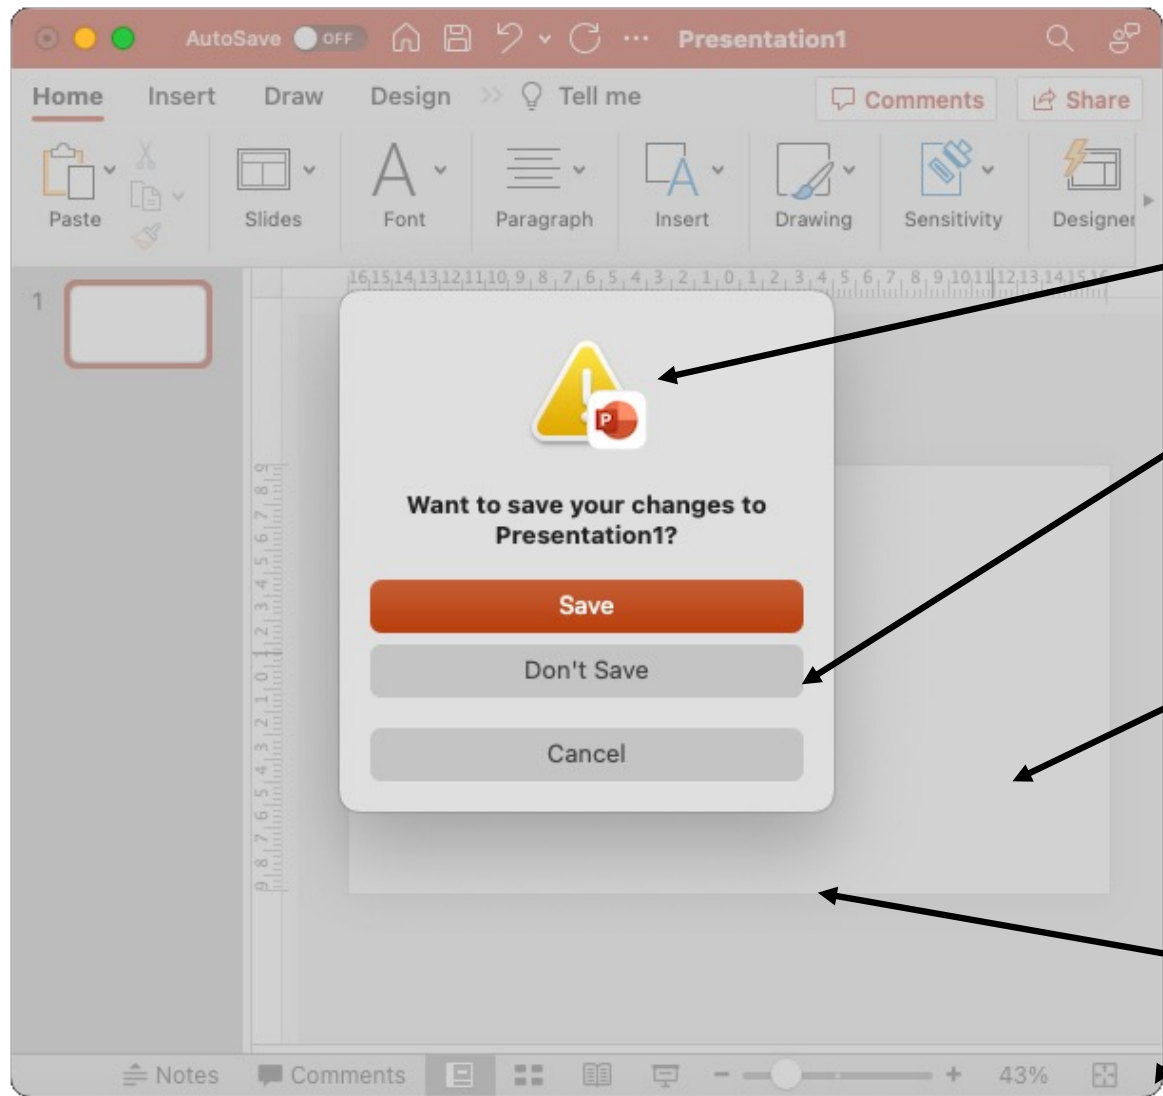

”format that combines wireframe-style page layout designs with a simplified flowchart-like way of representing interactions”

Week 4 in interaction design: Wireflows...

Week 4 in design systems

Things that are determined in design systems:

Use of icons

Colour hierarchy: safest choice presented in sharper colours

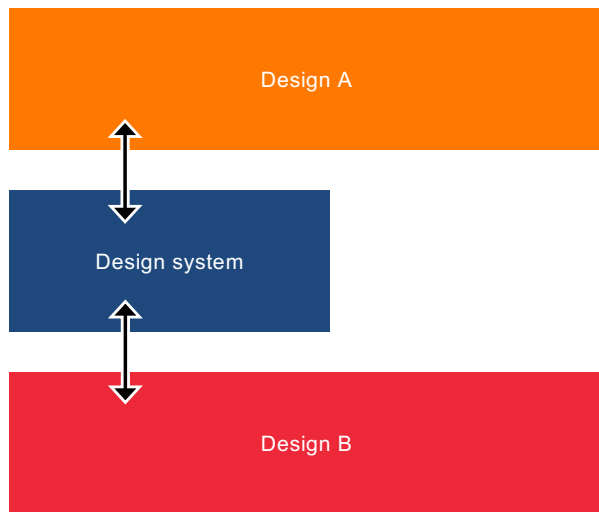

Inactive contents shown behind a semi-transparent gray "curtain"

Rounded window corners

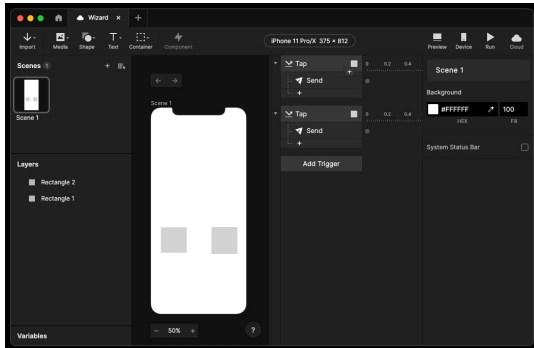

Fonts, colours, drop shadows, ...

Collaboration on Week 4

What components will the interaction design have?
How will they look like?

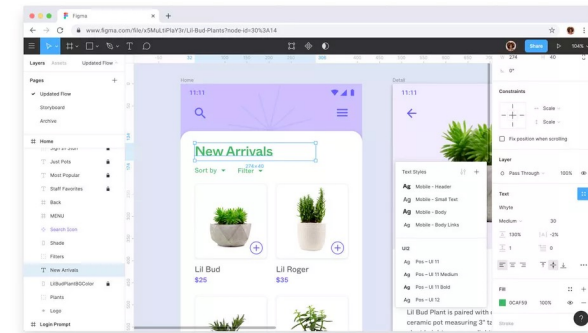

Weeks 4+5: Prototyping

ProtoPie

```
.sendbtn { color:black; border-radius:5px; };  
  
document.getElementById("sendbtn").addEventListener("click",function(e) { .. });
```

HTML + CSS + JS

Figma / InVision / Axure / Adobe XD / Sketch / ...

Arduino

Wizard of Oz

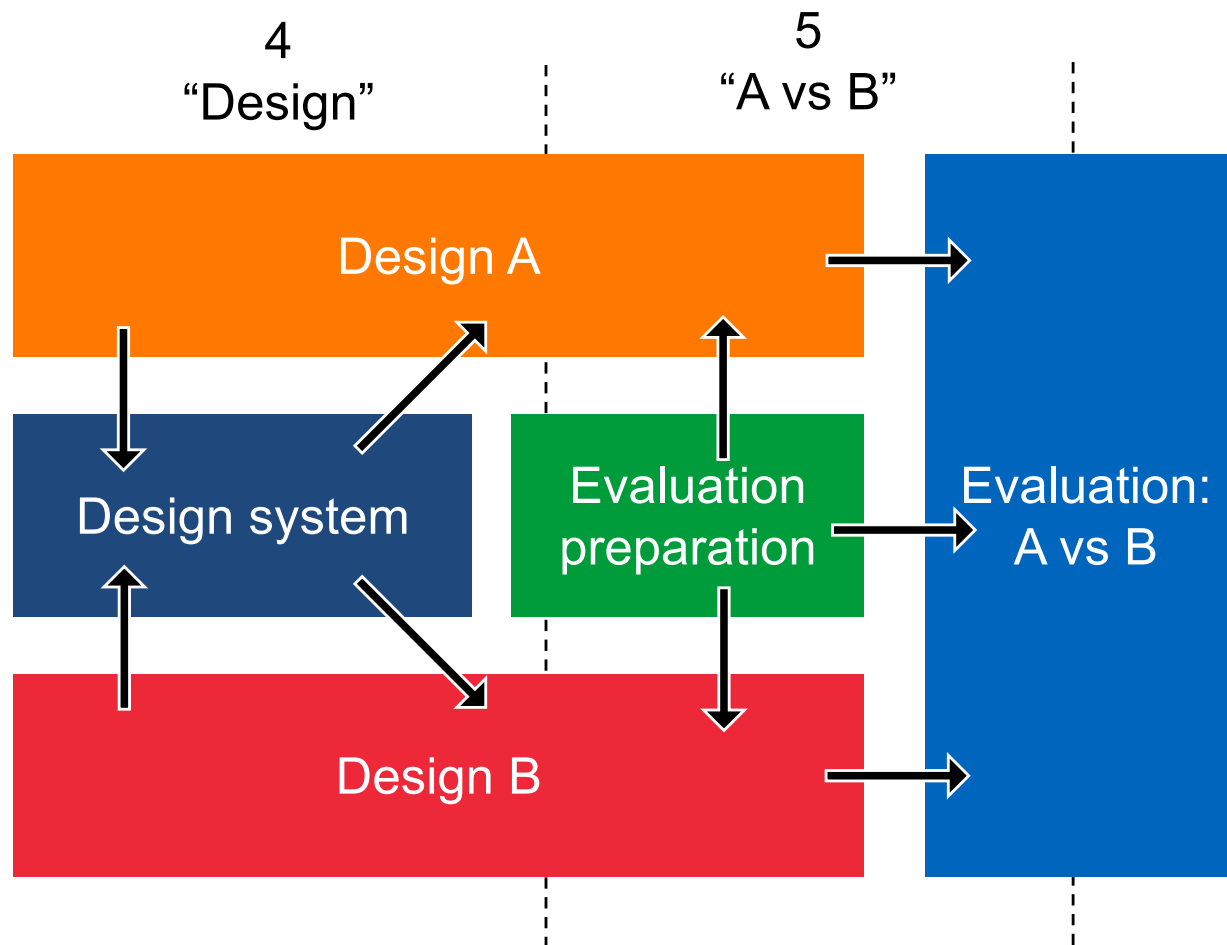

Reserve time to learn how to prototype the desired interactions!

* Scratch Fr Démo.png by Infofiltrage, CC 2.0 licensed. https://commons.wikimedia.org/wiki/File:Scratch_Fr_Démo.png
** <https://www.freecodecamp.org/news/ui-design-with-figma-tutorial/>

*** <https://hcde498processlog.wordpress.com/2015/05/11/wizard-of-oz-a-pen-that-corrects-you-when-you-write-off-line/>

Week 5: Changing the wireflows to finished-looking designs A and B

Similar look and feel in both prototypes

Comparable starting point for the A/B testing

Overview of week 4 (this week)

Preparation for Tuesday's tutoring

Meeting
times:

9:30

10:15

11:00

12:30

13:15

14:00

Location:
P210

Come to the meeting with these decisions:

1. What is your division into sub-groups?

Design system, Design A, Design B, Stitching,
Evaluation planning

2. Focus points of your design:

The most important use scenario(s)

The UX goal(s)

Be also ready to discuss:

What will be the difference(s) between Design A
and Design B?

Which prototyping tools you will use in
evaluations?

Reading material, quiz and discussion

David Benyon:

Chapter 2: PACT: a framework for designing interactive systems

Chapter 3: The process of human-centred interactive systems design

https://primo.aalto.fi/permalink/358AALTO_INST/ha1cg5/alma999355378806526

Quiz:

Answer to 3 short open-ended questions in MyCourses (deadline Friday 13:00):

<https://mycourses.aalto.fi/course/view.php?id=40122§ion=3>

Set a reminder so that you remember to answer!

Discussion about reading material

13:00–14:00 on Friday

This week's quiz questions

One of the sections in Benyon's book is about personas. When is it a good idea to create personas during a design process, and why?

Benyon also talks about scenarios in interaction design. What kinds of scenario-like creations have you designed during this course already, and what purposes have they served in your group's design process?

If you would need to choose TWO categories (out of the four main categories of the PACT framework) that are more important than the others in your project, which ones would they be, and why?

Friday's presentations

10-15 minutes / group

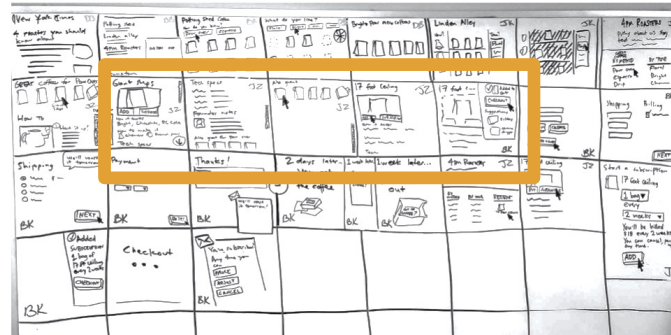

+

10-15 mins discussion

Submit the presentation via MyCourses by Friday 13:00

Create a three-part presentation =>

Part 1: Use scenario(s) and UX goal(s)

Part 2: Wireflows for Designs A and B

Part 3: Design system

Elements, layouts, fonts, backgrounds, ...

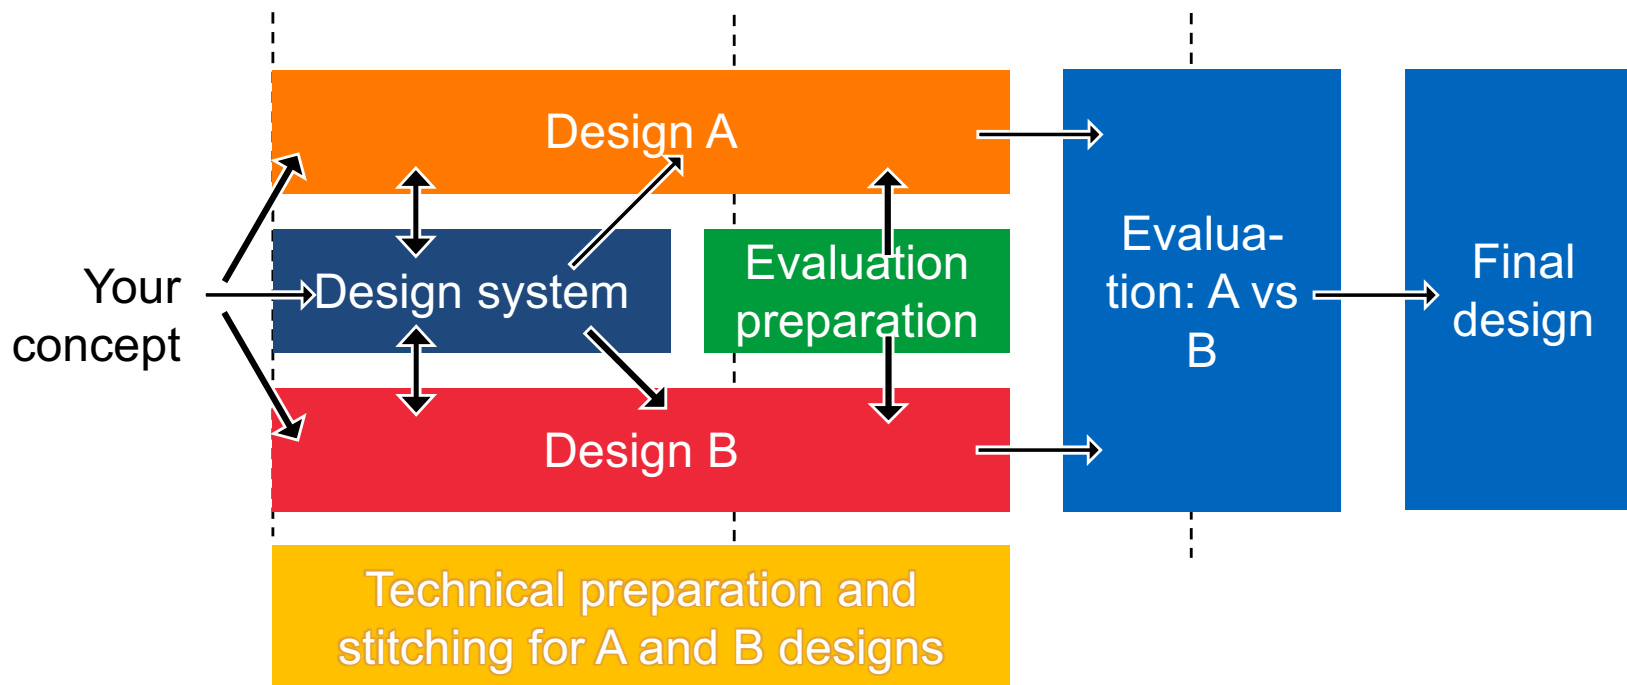

Group discussion: How do you want to divide the roles?

Questions:

What would each team member like to do?

Will you elect a tech-savvy "Stitcher" who puts together both designs?

Does the **design system** designer want to plan the **evaluations**?

Group-wide decision-making using scenario-based thinking

User goals and use scenarios

Use context and PACT (people, activities, contexts, technologies)

Scenario formats

Sharpen your concept (10 mins)

Use scenarios for a mobile hiking map:

Route planning

SOS situations

Distance calculation

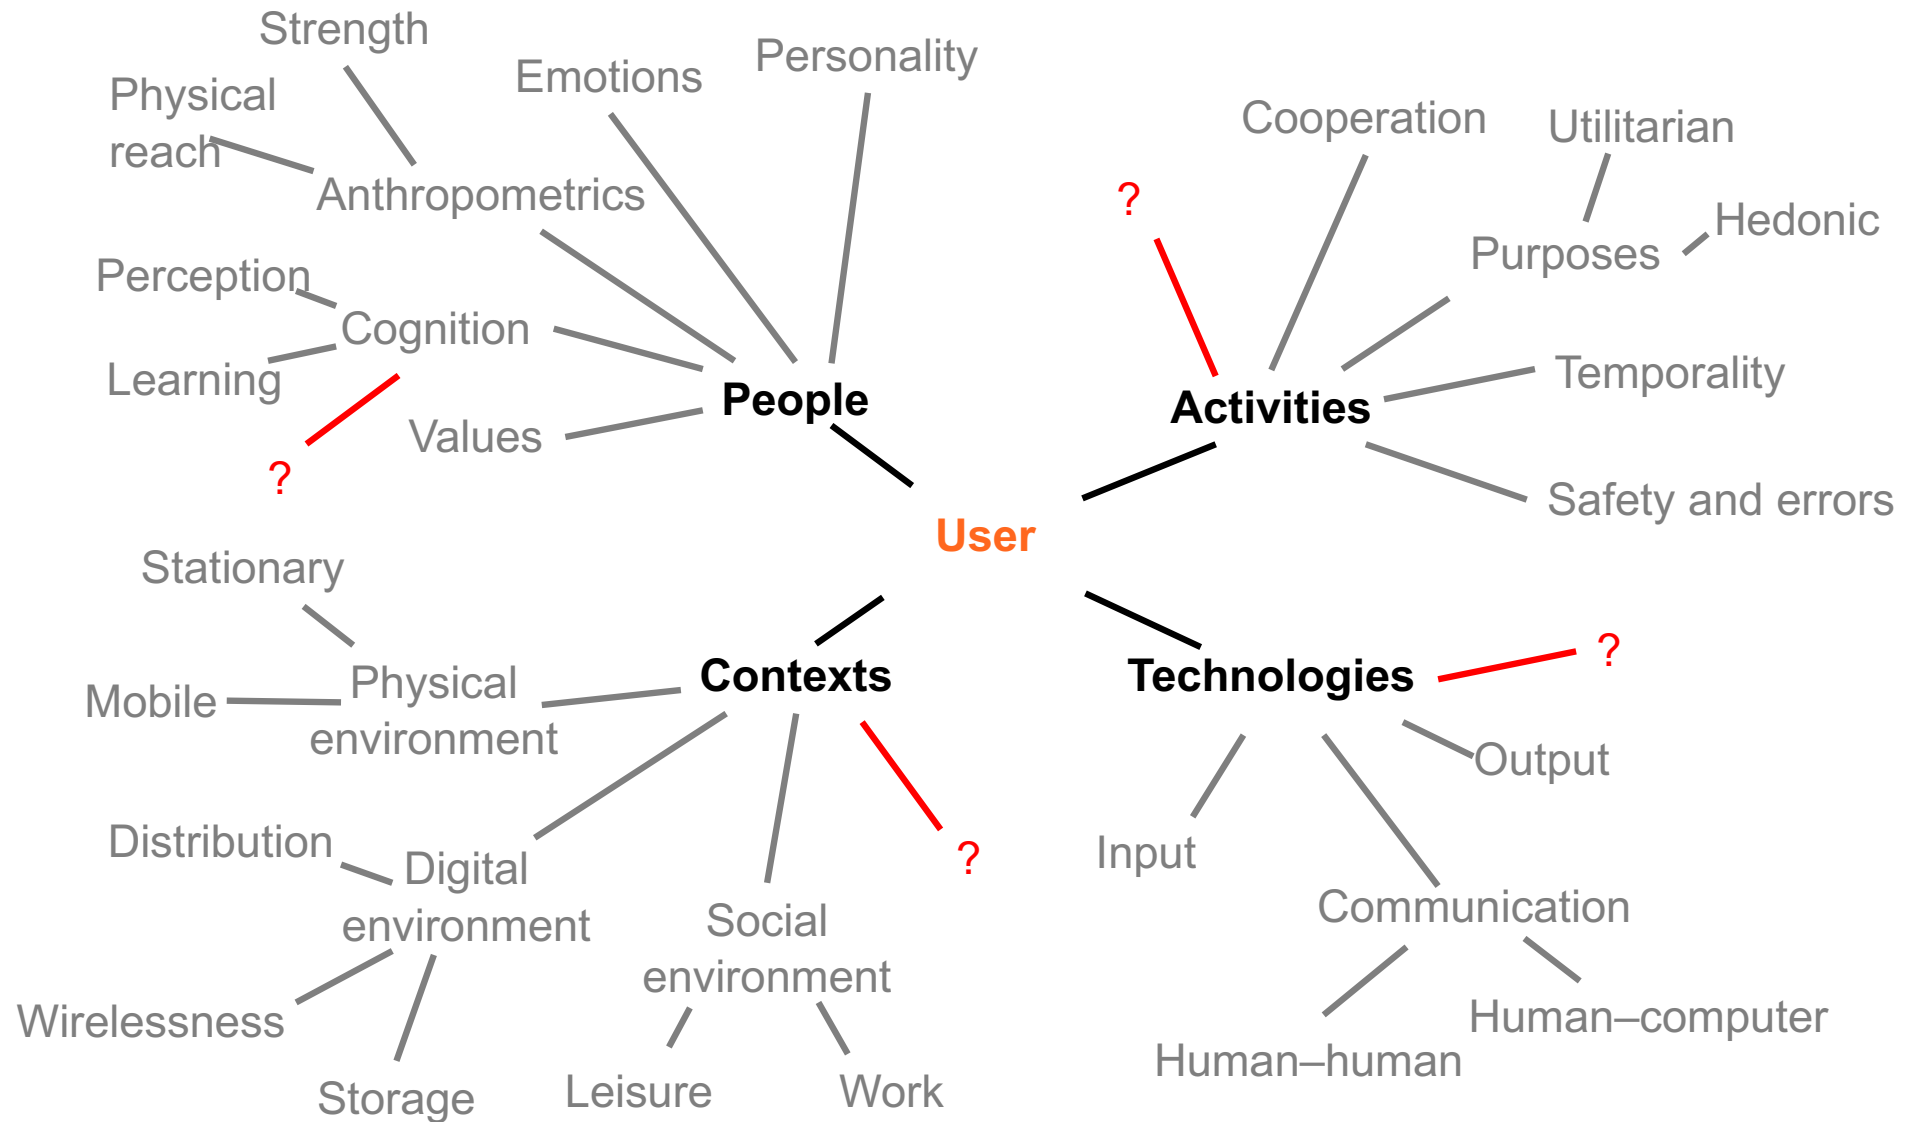

Finding where you are with a quick glance

Information search for camping sites, services, cabins etc

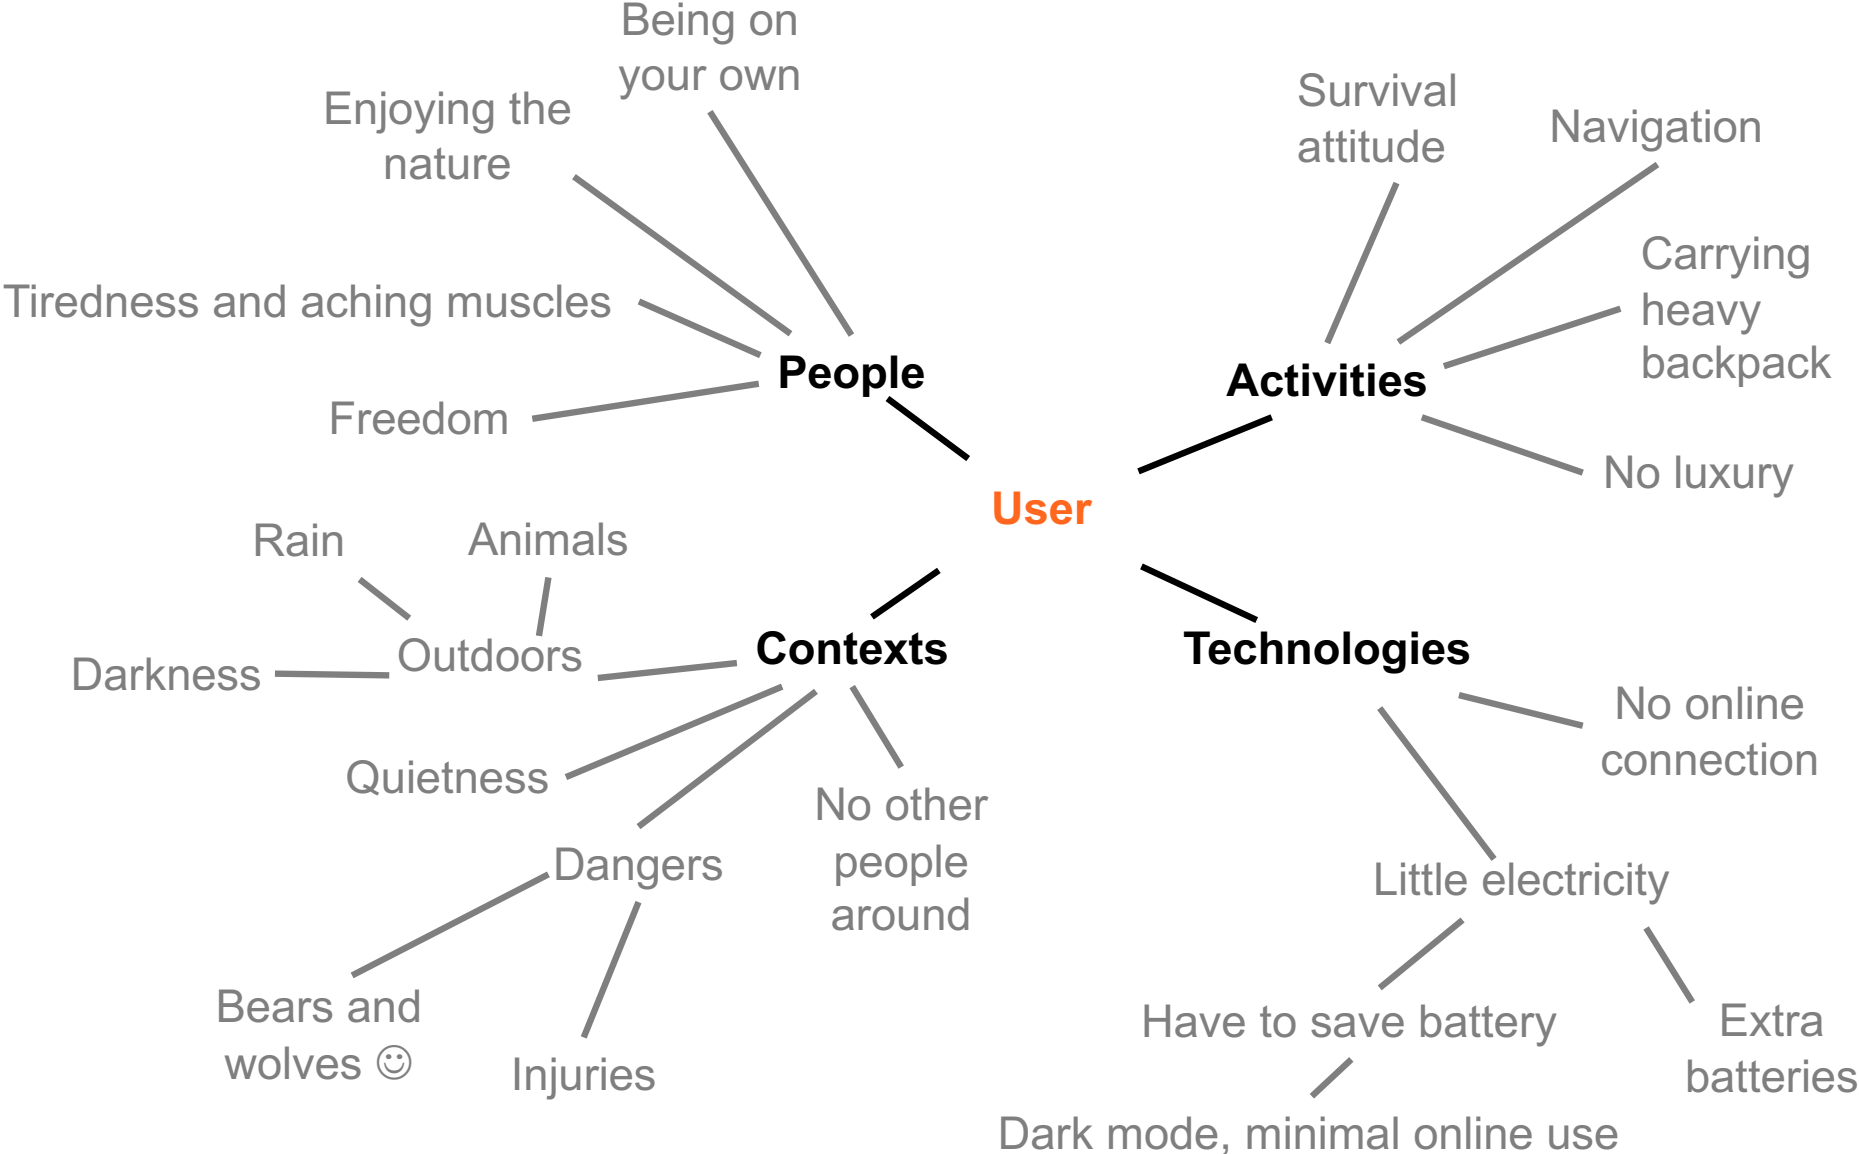

...

1. What **user goals** does your system / app / product support?
2. What **use scenarios** are related to those goals?
3. Discuss the goals and scenarios:
Which ones are most important?
Which one(s) do you want to focus on in your interaction design?
Can some of the goals and scenarios be combined or linked?

Considering user's context: PACT framework

User's context for the mobile hiking map:

Further refining for goals and scenarios

1. Analyse the use context

Use PACT, site visits, expert interviews, background material, ...

2. Select a UX goal

Do you aim for simplicity? Minimalism? Particular kind of aesthetics? Learnability? Efficiency? Prevention of errors? **

Do not choose too many goals!

Prioritise UX goals that you can “measure”

3. Develop more complete use scenarios

Storyboard / Textual story / Hierarcical task diagram / Flowchart ...

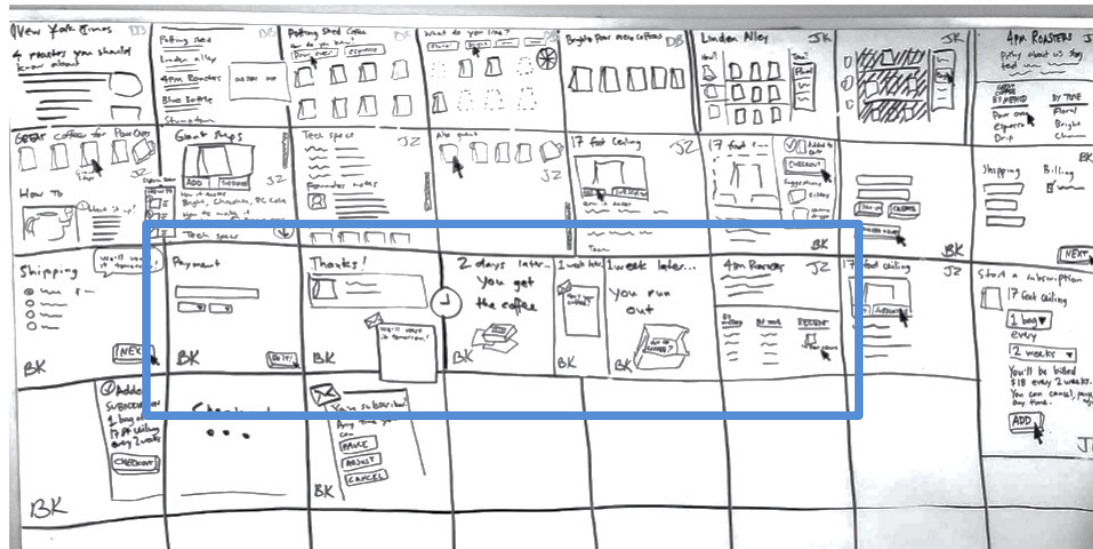

(See the following slides)

Outcome of these activities: you know what you want to optimise in weeks 4–6

Scenario formats: Storyboards

Storyboard shown
in the Sprint book

<https://uxplanet.org/user-personas-scenarios-user-stories-and-storyboards-whats-the-difference-cf00315f0799>

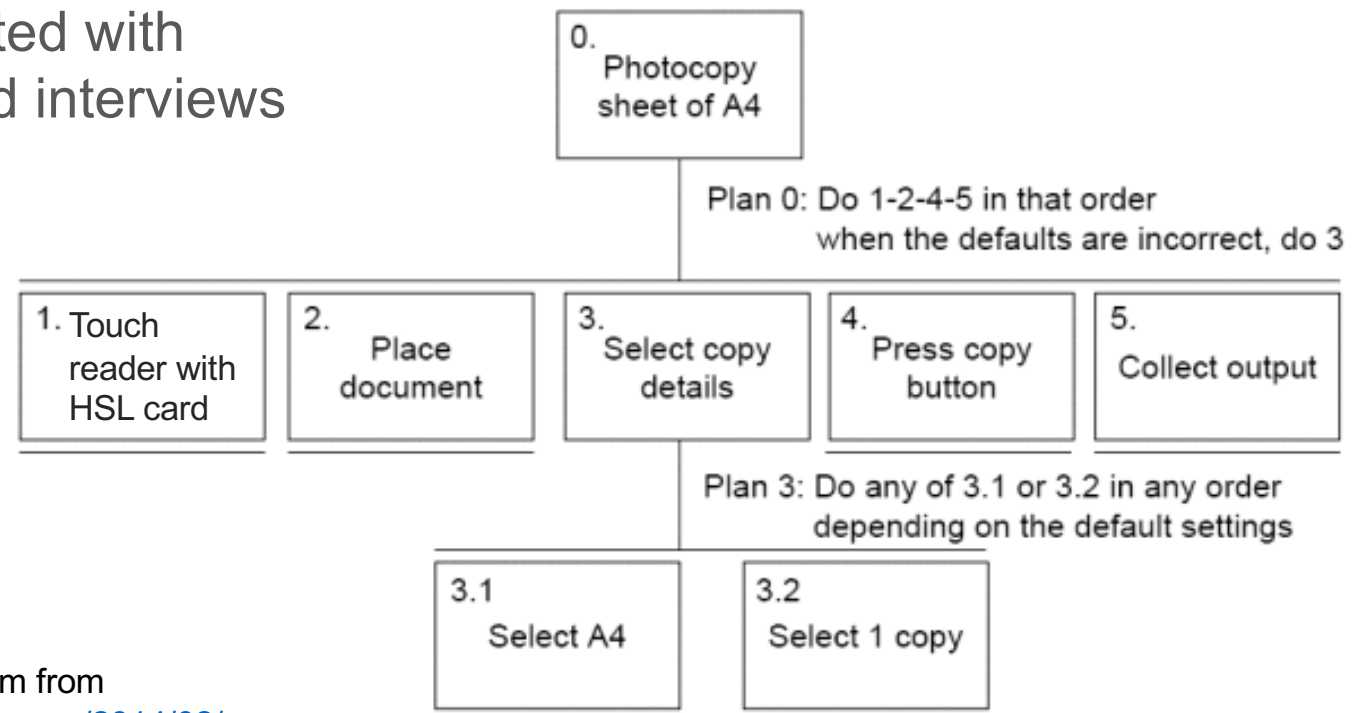

Scenario formats: HTA

Hierarchical task analysis:

Useful for understanding the structure of existing practices

You may then design your system to support this task structure or to re-structure it

Can be generated with observation and interviews

Example of a HTA diagram from <https://aakins1.wordpress.com/2014/02/06/week-1-task-analysis/>

Scenario formats: HTA...

Task that has subtasks

A terminal task that does not have subtasks

Plan for how subtasks are carried out:

Plan 0: Do 1-2-4-5 in that order
when the defaults are incorrect, do 3

Task numbering:

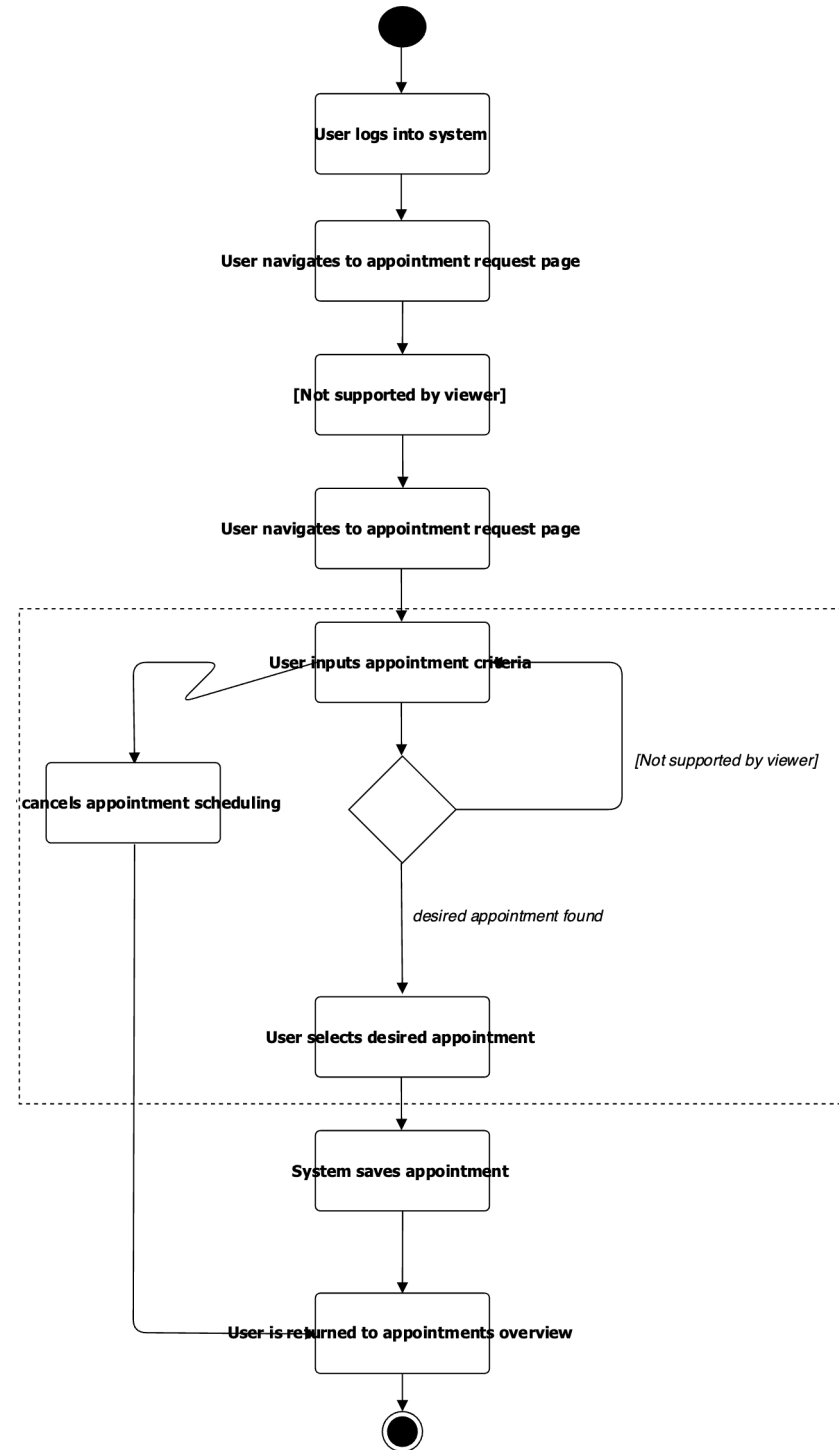

Scenario formats: Flowcharts

More info:

Silvio Piccolo (2016): Why Flowcharts are important in UX Design

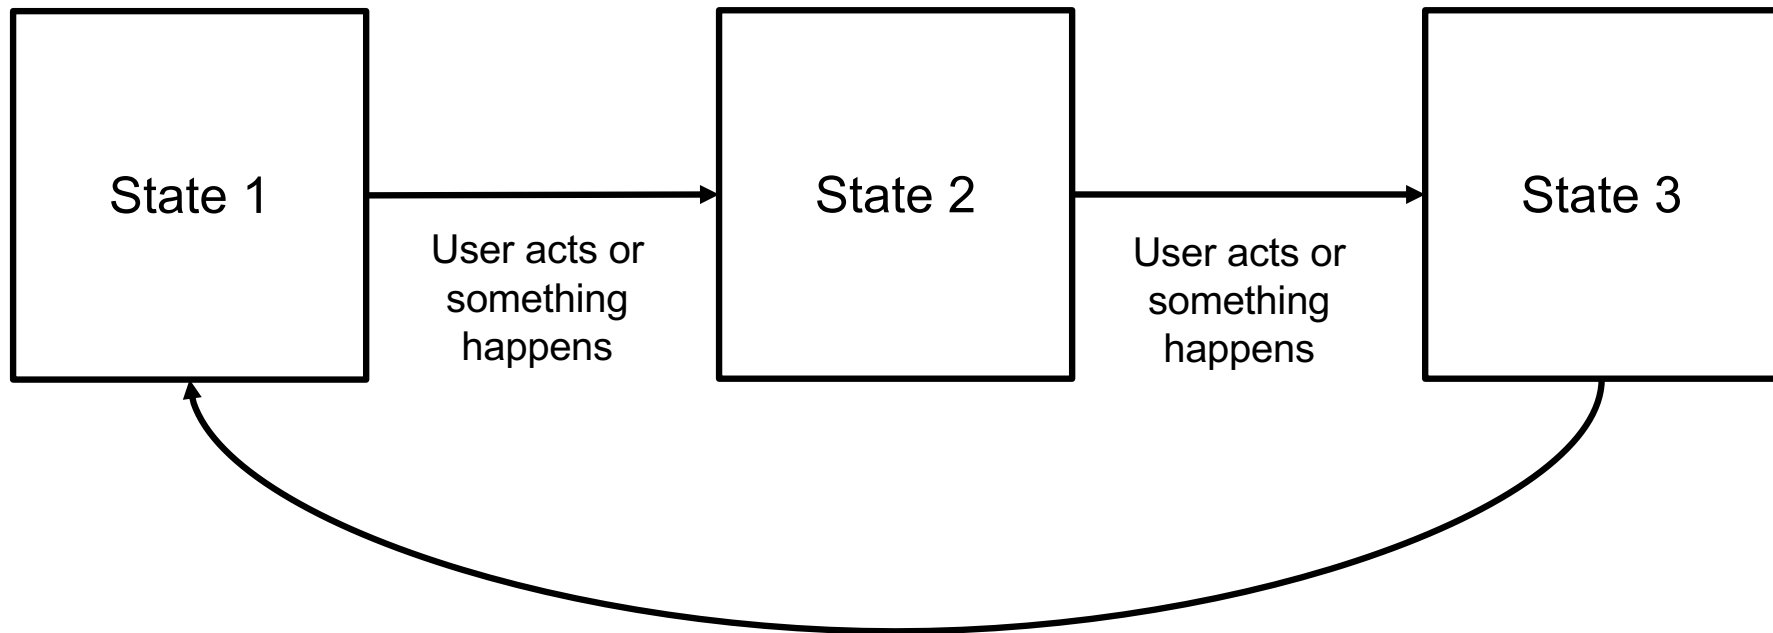

<https://medium.com/@silvio-piccolo/why-flowcharts-are-important-in-ux-design-f6bf3dfce080>

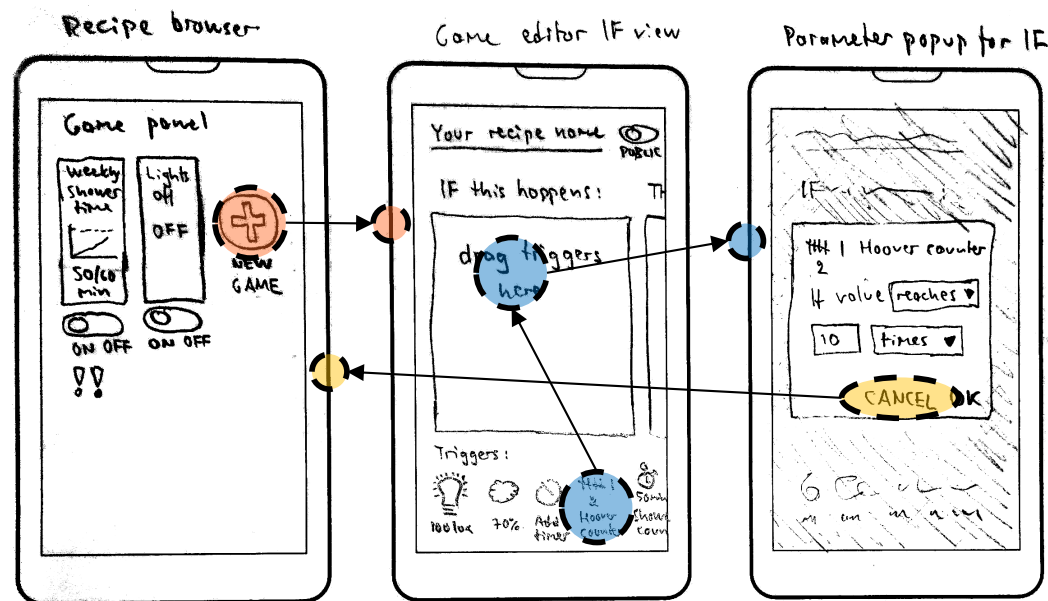

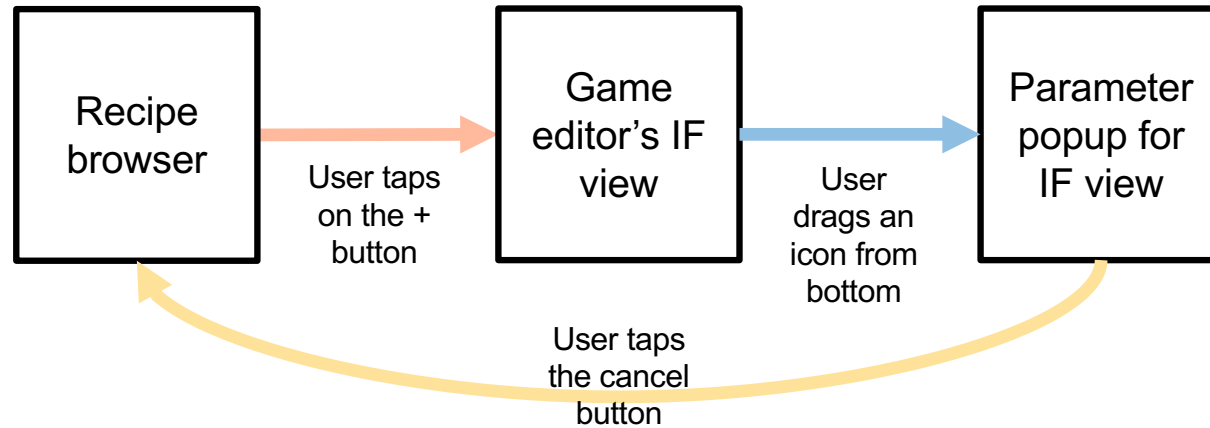

“activity diagram requesting appointment” Creative Commons licensed image from <https://freesvg.org/activity-diagram-requesting-appointment>

Scenario formats: Interaction sequences

How do the user and the system interact in a task

Scenario formats: Wireflows

Discussion in groups (15 mins): Further refining for goals and scenarios

1. Start analysing the use context

Use PACT, site visits, expert interviews, background material, ...

2. Select a UX goal

Do you aim for simplicity? Minimalism? Particular kind of aesthetics? Learnability? Efficiency? Prevention of errors? **

Do not choose too many goals!

Prioritise UX goals that you can “measure”

3. Develop more complete use scenarios

Storyboard / Textual story / Hierarcical task diagram / Flowchart ...

Break? Lunch?

Background concepts for interaction design

With repetition from the User-Inspired Design (UID) course

A vs B designs

Usability heuristics / criteria

Gestalt laws

Affordances

Mental models

Cognitive offloading

Gulfs of evaluation and execution

This design has a layout where users swipe between alternatives.

Designer

Team leader

Why?

I don't know, I think it looks nice

??

Designer

Team leader

It uses the carousel pattern. That is familiar for users from Netflix UI, for example

Ok, great! It makes it easy for people to learn our UI

Designer

Team leader

Can you suggest **a design** for our service in our next week's meeting?

Team leader

Designer

I made these **three designs**. The first one is probably fastest to create, the second one would feel most familiar to our users, while the third one would have the following interesting interaction principle...

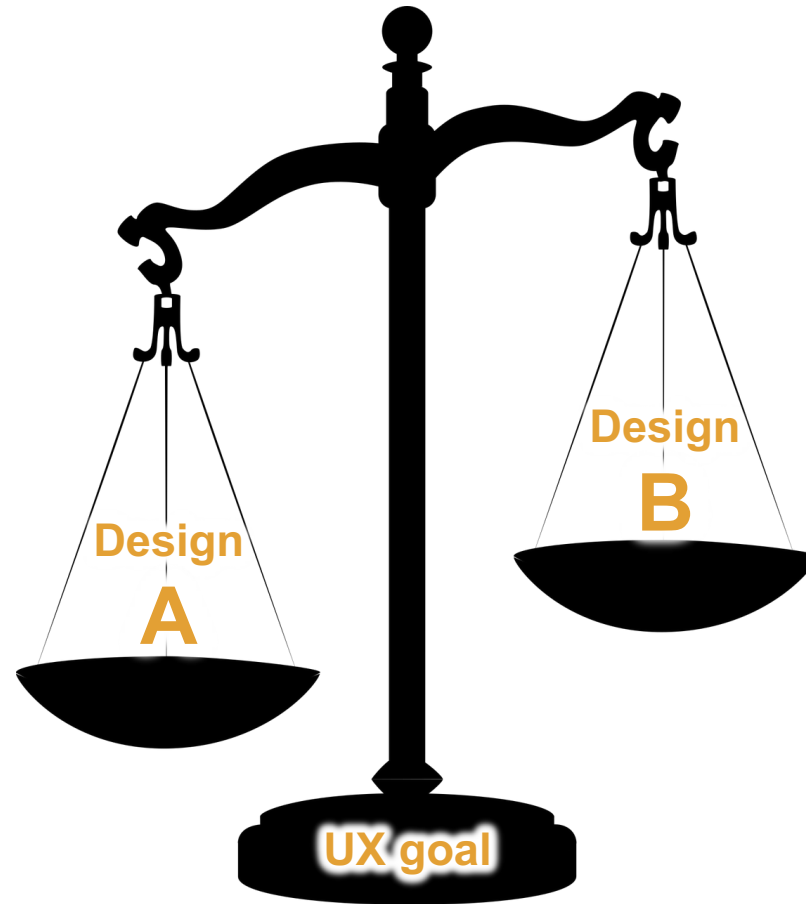

Team leader

(1 week later)

Your UX goal — A vs B design evaluation

How Designs A and B can differ

Different interaction sequences

“First step A, then B” vs “First step B, then A”

Different IxD patterns

Wizard vs. accordion

Different solutions to the same problem

Different information visualizations

Etc.

Purpose of A vs B evaluations

This is not a competition between teams!

Think designs A and B as **complementary** alternatives

- a) Two equally good-seeming options – you don't know which one is better
- b) One that seems stronger, and another one that you'll try out to be sure about A's superiority

Usability criteria (Norman)

Use both knowledge in the world and in the head

Simplify the structure of tasks

Make things visible

Get the mappings right

Exploit the power of constraints

Design for error

When all else fails: Standardize!

“Seven principles for transforming difficult tasks into simple ones”;
Norman (1988). The psychology of everyday things.

Usability criteria (Nielsen)

Visibility of system status

Match between system and the real world

User control and freedom

Consistency and standards

Help users recognize, diagnose, and recover from errors

Error prevention

Recognition rather than recall

Flexibility and efficiency of use

Aesthetic and minimalist design

Help and documentation

"Usability heuristics"; Nielsen (1993). Usability engineering.

<https://www.nngroup.com/articles/ten-usability-heuristics/>

Usability criteria (Shneiderman)

Make it clear to user when the task is completed

1
Strive for consistency

2
Enable frequent users to use shortcuts

3
Offer informative feedback

4
Design dialog to yield closure

5
Offer simple error handling

6
Permit easy reversal of actions

7
Support internal locus of control

8
Reduce short-term memory load

Make the user feel certain that they are controlling the task, not the computer

"Eight golden rules"; Shneiderman (1988).
Designing the user interface.

Usability criteria (Shneiderman)

Easy to learn

Efficient

Memorable

Designed for
error

Satisfaction

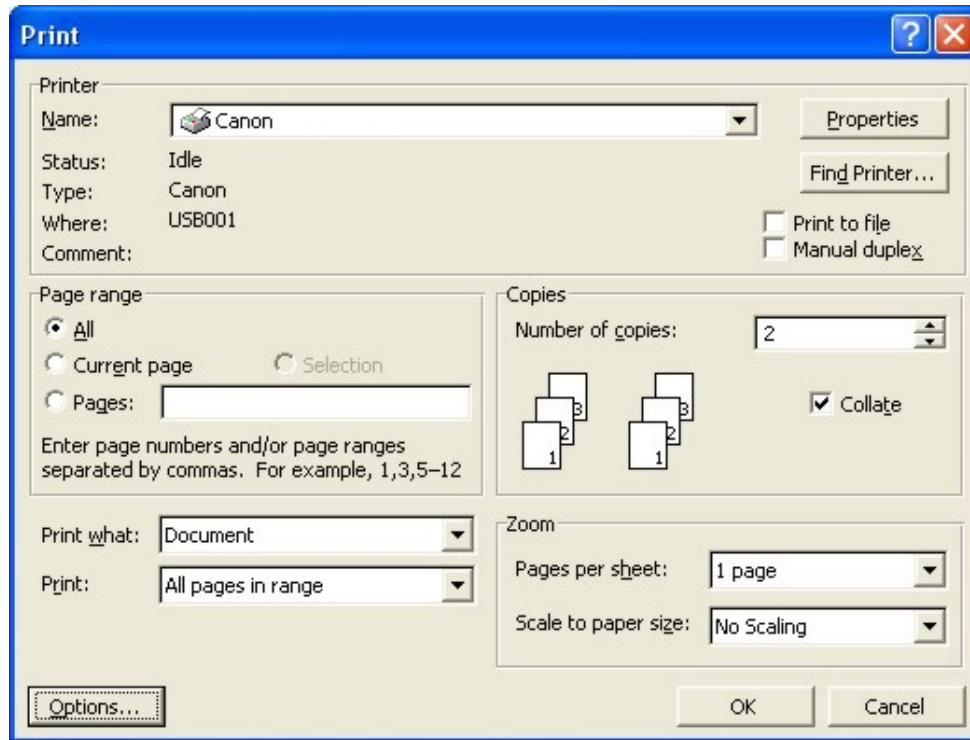

Visual layout principles: the Gestalt laws

Origin: Germany 1920–1950

Original sources, Koffka 1935, Wertheimer 1959, Köhler 1969

Gestalt laws in UI design

Law of enclosure used to group functionally related items together

Law of proximity used to differentiate radio buttons from check boxes

Sources: [Geoff Hart](#) and [Kevin Matz](#)

Communicating what user can do: Affordances

“Direct perception” of action potential, different for each animal depending on its perceptual and action capabilities

<https://www.needpix.com/photo/download/1097709/away-stairs-gradually-stone-rise-stair-step-staircase-forest-stone-steps>

Image by [Karen Arnold](#) from [Pixabay](#)

Image by [Elias Schäfer](#) from [Pixabay](#)

Sources:
Gibson 1979,
Norman 1988,
Gaver 1991

Affordances in UX design

Communicate possibilities for action with their visualization.

Send

Poor
perceived
affordance
of pressing

Good
perceived
affordance
of pressing

Memory

Humans:

Good at recognition

GUIs

Bad at recall

Command line interfaces
(e.g. order of arguments in a
function call)

Encoding into larger
chunks of meaning

ADSGIXD
CRSWRK

Recalling vs recognizing
the colours of euro notes

How IDEs help recall

```
Customer c = new Customer();
```

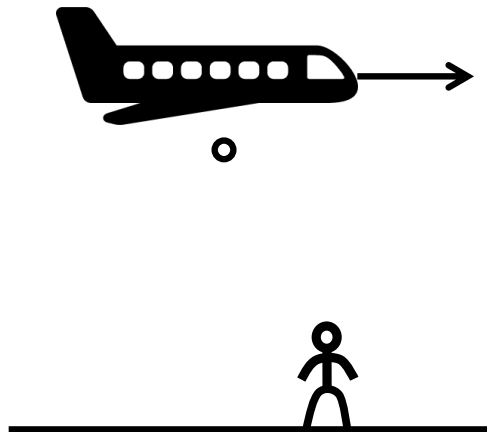

```
type String  
equals(Object obj) boolean  
getClass() Class<?>  
getType() String  
hashCode() int  
notify() void  
notifyAll() void  
setType(String type) void  
toString() String  
wait() void  
wait(long timeout) void  
wait(long timeout, int nanos) void
```

Mental models

Mental models

= “mostly imagined, dynamic models that we use in everyday life to think about the world” *

If you drop a metal ball from an airplane, what path will it fly?

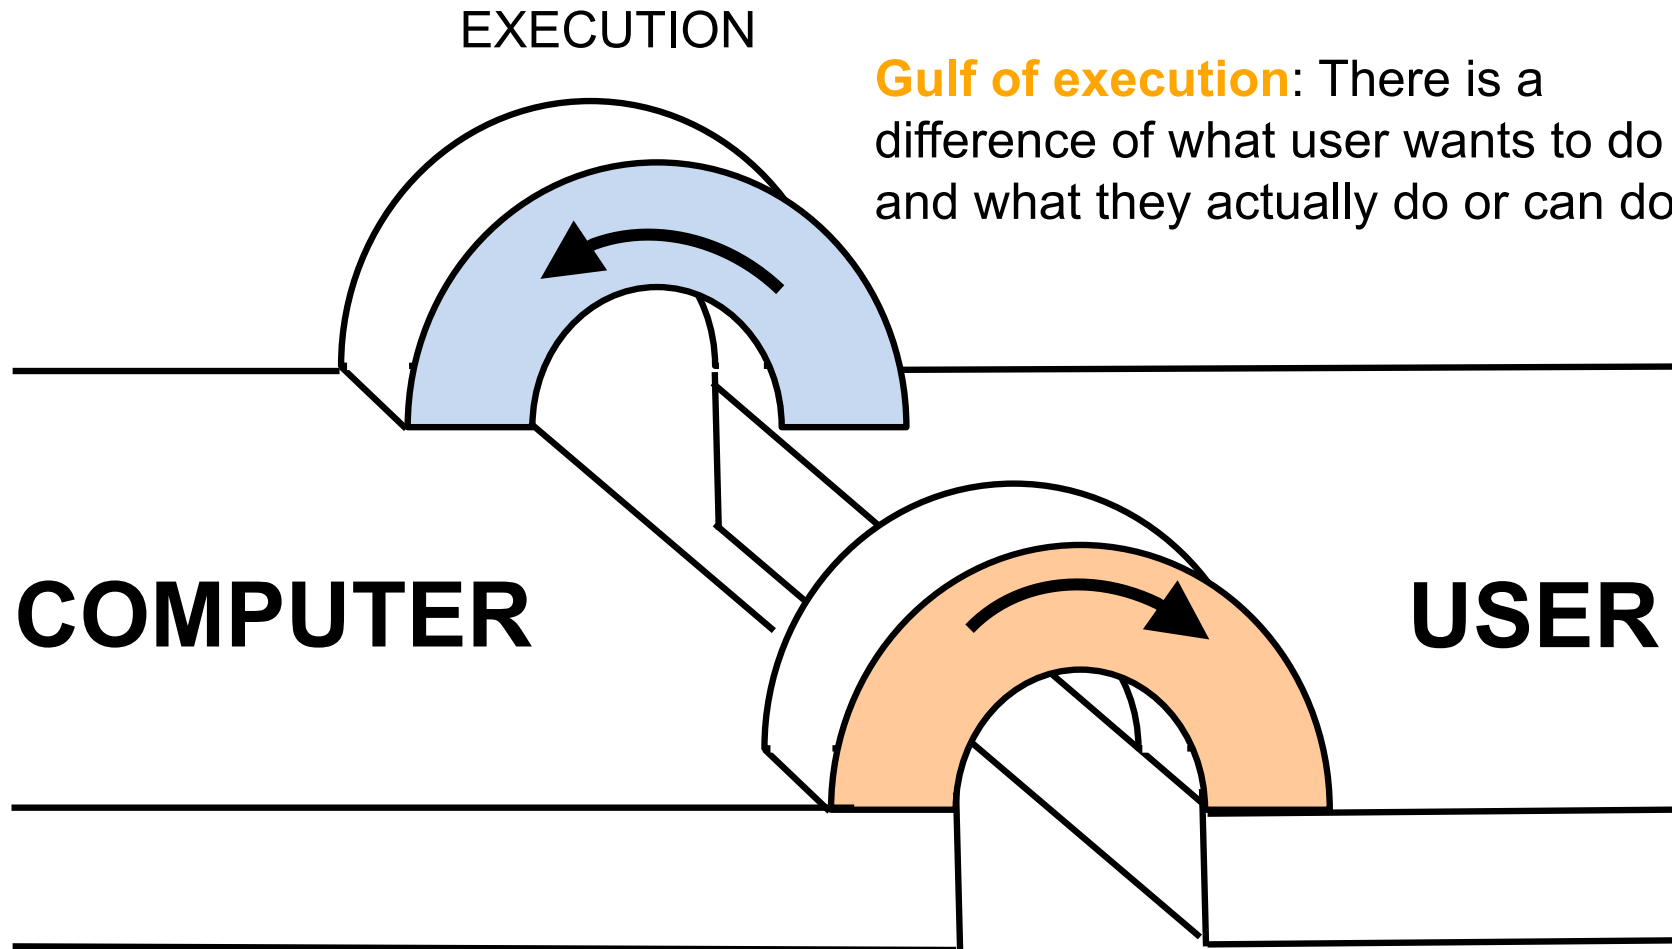

Content in internet

If my internet browser loads pages slowly, where is the problem?

* Eysenck & Keane, 2000 p. 432

Two stages where interaction can go wrong

Gulf of execution: There is a difference of what user wants to do and what they actually do or can do

Gulf of evaluation: When the user misunderstands the system's real state

EVALUATION

Sharing of responsibilities: “cognitive offloading”

Pattern recognition

Intuitive interpretation (e.g.,
“reading between the lines”)

Ill-defined problem solving

Creativity

Brute force solutions

Simulations

Generation of alternatives

Automatable and repetitive tasks

Planning in well-defined problem
spaces

External memory

Checking for human errors

Multi-tasking and multi-modal UIs

What would be a good wayfinding app for bike couriers?

Challenges:

Hands are on handlebar

Eyes are on the traffic

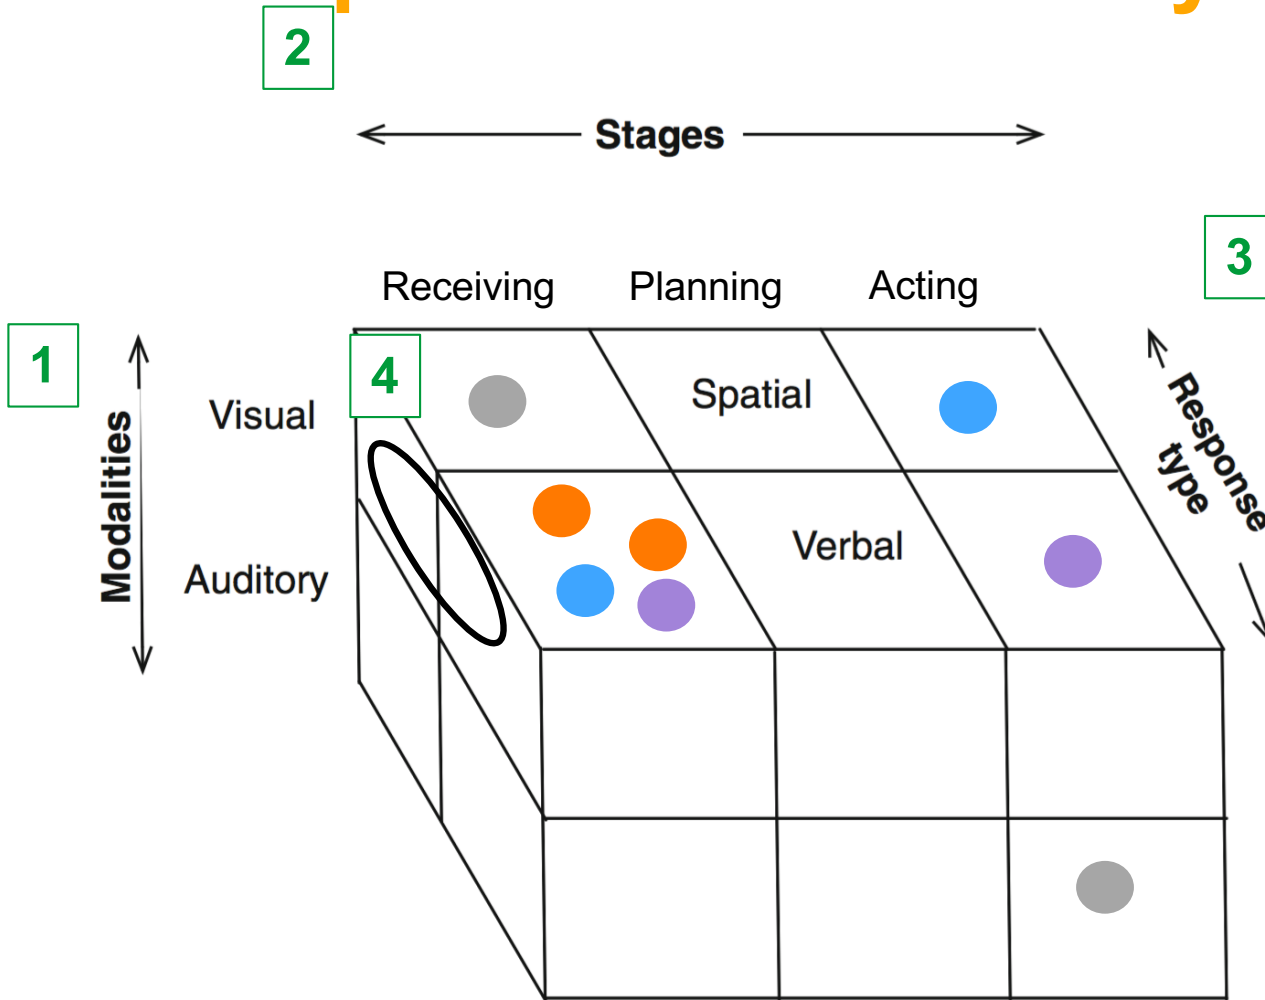

Ears scan the surroundings

Brain is planning actions and navigation

Photo credit: [Bike messenger by Mal Booth](#).
Attribution-NonCommercial-ShareAlike 2.0
Generic (CC BY-NC-SA 2.0)

Multiple resources theory

4 dimensions:

- 1** Modalities
- 2** Stages of processing
- 3** Response types
- 4** Focal vs ambient (only the visual channel)

+ Motor conflict
(e.g., use of hands)

● 3D conflict
 ● 2D conflict
 ● 1D conflict
 ● No resource conflict

Use design heuristics as your guide

Use both knowledge in the world and in the head

Simplify the structure of tasks

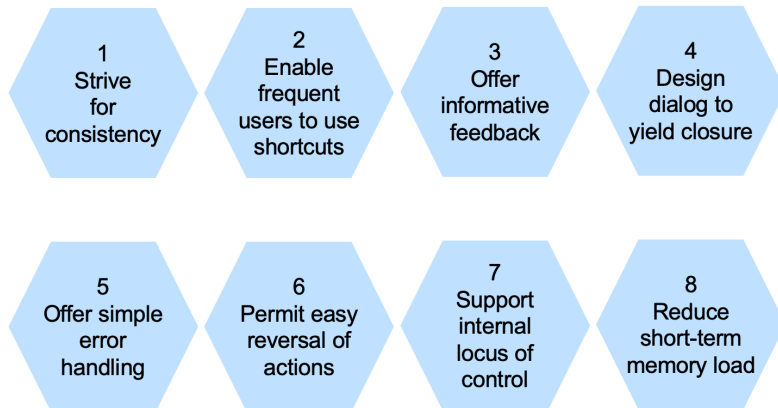

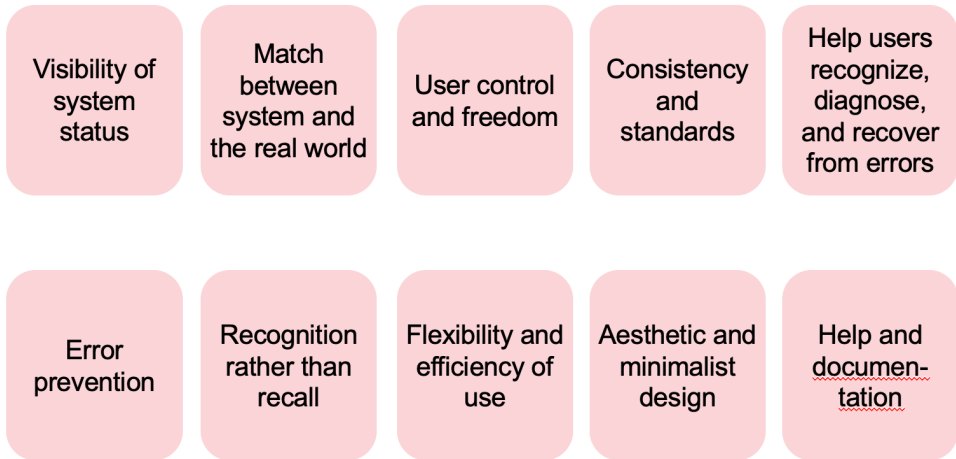

Make things visible

Get the mappings right

Exploit the power of constraints

Design for error

When all else fails: Standardize!

Group work

What PACT factors you must focus on, based on cognition, design heuristics, user's goal, and your UX goal?

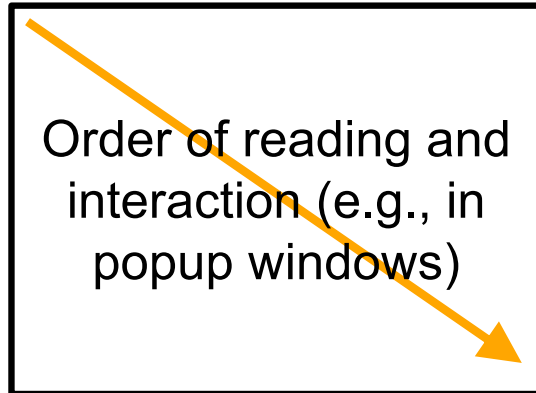

How are you going to design it?

Design conventions

Design patterns

Conventions

Order of reading and interaction (e.g., in popup windows)

Commonly known icons

[Blue text is a hyperlink](#)

Item is clickable if it changes when it is hovered

Design patterns

”A design pattern is the re-usable form of a solution to a design problem” (Wikipedia)

Origins of the design patterns:

Christopher Alexander (architect)

Design patterns are repeatable design solutions to in urban planning and house design

”You can use this solution a million times over, without ever doing it the same way twice” – Alexander, *A Pattern Language*, page x

In computer science and interaction design:

Highly adopted especially in object-oriented programming

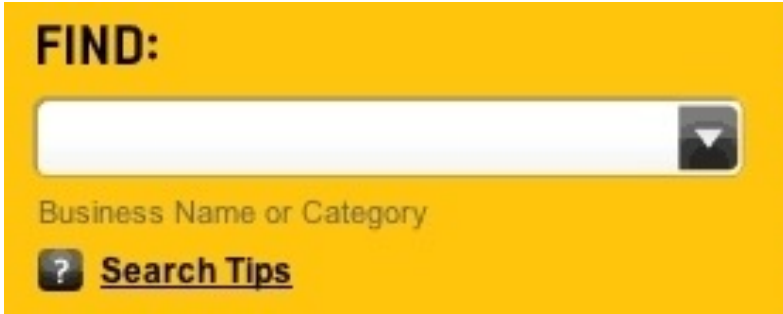

Also in IxD

Design patterns are a toolbox of good, tested design solutions

Design patterns

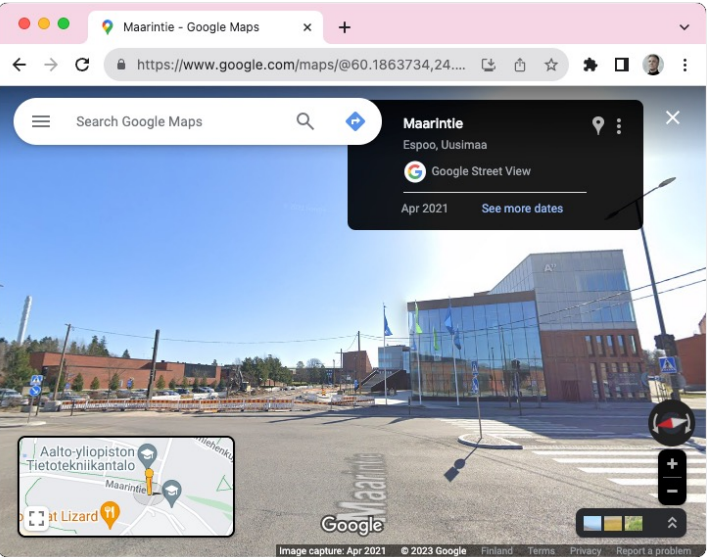

Direction of reading

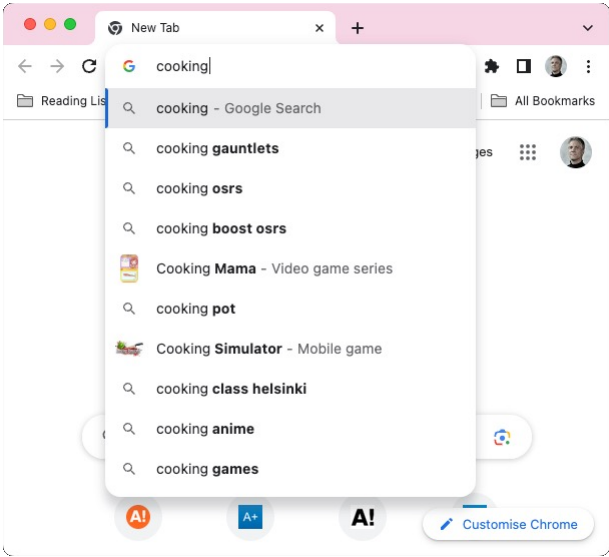

“Forgiving format”

<https://ui-patterns.com/patterns/ForgivingFormat>

“Overview + detail”

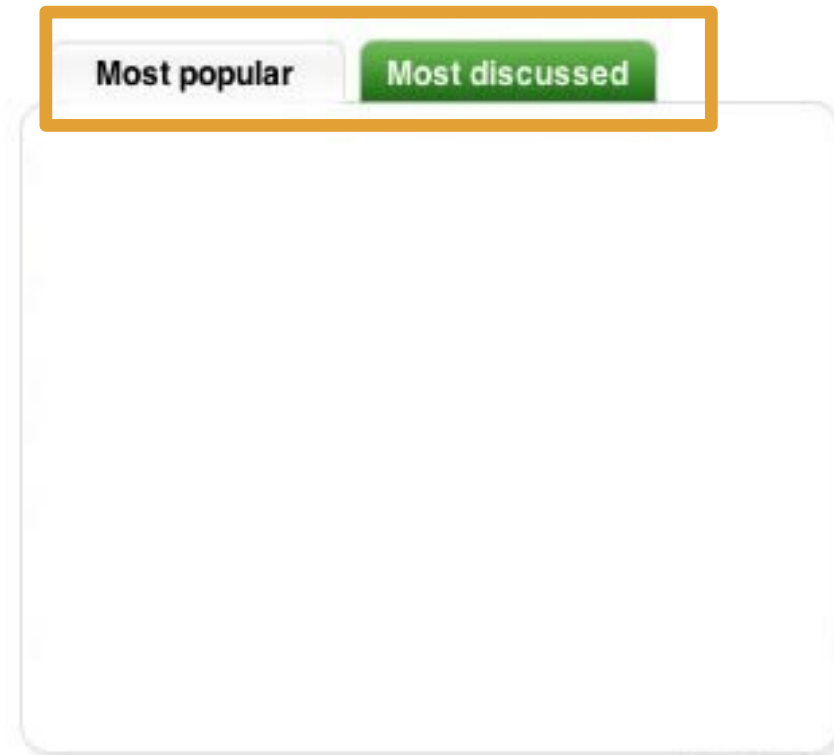

“Autocompletion”

Wizard

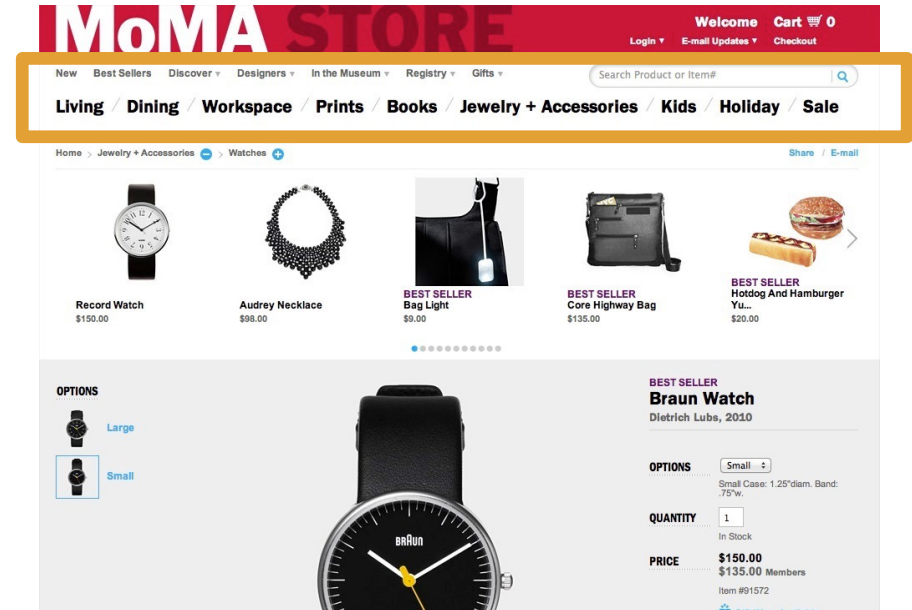

The screenshot shows a Facebook wizard interface. At the top, there is a dark blue header with the Facebook logo on the left and a user profile icon labeled 'Svend' on the right. Below the header, a progress bar contains two steps: 'Step 1 Find your friends' (highlighted with an orange border) and 'Step 2 Add Profile Pic'. The main content area is titled 'Are your friends already on Facebook?' and includes a sub-header 'Many of your friends may already be here. Searching your email account is the fastest way to find your friends on Facebook. See how it works.' Below this, there are four options for finding friends: 'Outlook.com (Hotmail)' with an email input field and a 'Find Friends' button; 'Yahoo!' with a 'Find Friends' button; 'Skype' with a 'Find Friends' button; and 'Other Email Service' with a 'Find Friends' button. At the bottom right of the options, there is a 'Skip this step' link. A lightbulb icon is followed by the text 'Facebook stores your contact list for you so that we can help you reach more people and connect friends. Learn more.'

Modal dialogs

Popup windows that demand an answer from the user before they can do anything else

Breadcrumbs

The screenshot shows the NASA website's navigation structure. At the top left is the NASA logo. To its right are four main navigation tabs: HOME, NEWS, MISSIONS, and MULTIMEDIA. Below these tabs are links for 'Log In To MyNASA' and 'Sign Up'. A breadcrumb trail is located below the navigation tabs, consisting of 'NASA Home > News & Features > Budget'. This breadcrumb trail is highlighted with an orange rectangular box. Below the navigation area, there is a left sidebar with a 'News & Features' section containing links for 'News Topics', 'News Releases', 'Media Resources', and 'Speeches', and a 'Budgets & Plans' section containing a link for 'Reports'. The main content area is titled 'Budget Information' and contains two sections: 'FY 2011 Budget' and 'Program Office Assignments'. The 'FY 2011 Budget' section lists several PDF documents with their respective sizes, such as 'FY 2011 Budget Overview (387 Kb PDF)' and 'Administrator Bolden's Statement (68 Kb PDF)'. The 'Program Office Assignments' section lists PDF documents for 'Ames Research Center (76 Kb PDF)', 'Dryden Flight Research Center (72 Kb PDF)', and 'Glenn Research Center (76 Kb PDF)'.

Design fashions

Skeuomorphism

Flat design

Infinite scroll vs pagination

Card-based design

Questions you can ask when designing

Can I simplify interactions by removing clicks and high-precision actions?

Does my design go against a heuristic principle?

How do other apps enable similar interactions?

Does my design take into account the factors in the PACT diagram?

Is it fluent and natural to move between screens?

Am I thinking users' needs, not just my own taste?

Wizard of Oz prototyping

Wizard of Oz (“WoZ”) prototyping

<https://hcde498processlog.wordpress.com/2015/05/11/wizard-of-oz-a-pen-that-corrects-you-when-you-write-off-line/>

Wizard-of-Oz simulations

Image credit: See last slide

Chess-playing automaton constructed by Wolfgang von Kempelen in 1770

Used in studies on futuristic technologies

e.g., artificial intelligence

Applies deception:

Participant believes that the system is real while a part of its operation is controlled by the experimenter

Setup is revealed after the study

E.g., speech recognition studies

Wizard-of-Oz setup

☁ 5°C **Baby: OK**

i Venetian Bridge

This bridge, sculpted to reflect the atmosphere of carnivals and canals, was drawn by architect-prof Gehry in 1999 to lighten up

Helsinki Design System: Button

Variations

Primary

A Primary button is reserved for the most important action on the screen. Primary action is usually either mandatory or essential for the user. Primary buttons are designed to clearly highlight the most important action, and therefore you should avoid having multiple primary buttons on one screen. For less important actions, consider using secondary or supplementary buttons instead.

Secondary

Secondary buttons are used for actions which are not mandatory or essential for the user. Often screens will include multiple secondary buttons alongside one primary button.

Design Systems in this course

Purposes:

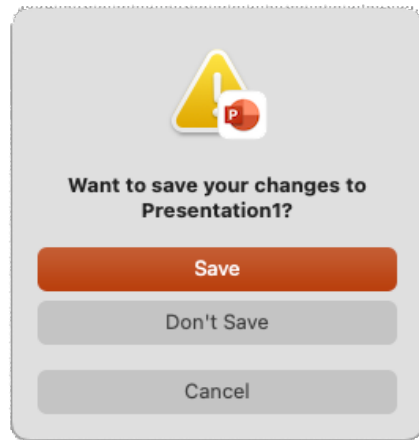

- Communicate to the user how the UI can be interacted with
- Ensure visual consistency
- Make Designs A and B on the same level

Not in this course's focus:

- Branding
- How the design system would support programmers
=> ~~CSS settings and component libraries~~

Think about these:

Colours

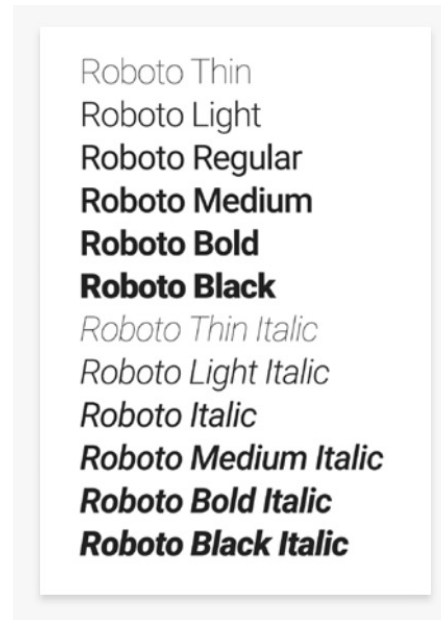

Hierarchies: colour-coding of primary and secondary action options

60-30-10 rule*

Contrasts + web-safeness

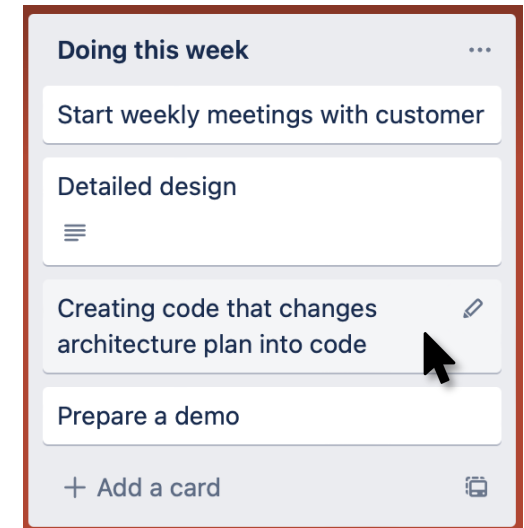

Fonts

“2 fonts is enough” rule

Sufficient differences between fonts

Communicating “actionability”

Hovering Animation

* <https://www.youtube.com/watch?v=UWwNIMHFdW4>
