

Week V

Overview

- ▶ Class P;
- ▶ Class NP;
- ▶ P vs NP;
- ▶ Decision Problem;
- ▶ Travelling Salesman Problem (TSP).

Definitions

- ▶ **Decision problem** is a **yes-or-no** problem;
- ▶ **TSP** is a graph problem where all nodes are visited only once as part of cycle.

Modelling - Decision variables

$$x_{ij} = \begin{cases} 1, & \text{if path goes from city } i \text{ to city } j \\ 0, & \text{otherwise} \end{cases}$$

Modelling - Objective Function

$$\min \sum_i \sum_{j,j \neq i} x_{ij} f_{ij}$$

MTZ - Miller-Tucker-Zemlin

$$\text{Minimize } \sum_i \sum_{j,j \neq i} x_{ij} f_{ij}$$

Subject to:

$$\sum_{i=1, i \neq j}^n x_{ij} = 1 \quad \forall j \in \{1, \dots, n\}$$

$$\sum_{j=1, j \neq i}^n x_{ij} = 1 \quad \forall i \in \{1, \dots, n\}$$

$$u_i - u_j + 1 \leq (n - 1)(1 - x_{ij}) \quad 2 \leq i \neq j \leq n$$

$$2 \leq u_i \leq n \quad 2 \leq i \leq n$$

$$x_{ij} \in \{0, 1\} \quad i, j \in \{1, \dots, n\}$$

DFJ - Dantzig-Fulkerson-Johnson

$$\text{Minimize } \sum_i \sum_{j,j \neq i} x_{ij} f_{ij}$$

Subject to:

$$\sum_{i=1, i \neq j}^n x_{ij} = 1 \quad \forall j \in \{1, \dots, n\}$$

$$\sum_{j=1, j \neq i}^n x_{ij} = 1 \quad \forall i \in \{1, \dots, n\}$$

$$\sum_{i \in Q} \sum_{j \neq i, j \in Q} x_{ij} \leq |Q| - 1 \quad \forall Q \subset \{1, \dots, n\}, |Q| \geq 2$$

$$x_{ij} \in \{0, 1\} \quad i, j \in \{1, \dots, n\}$$

Example - TSP
