Needs to make changes in your business process

New team or new skills?

Scared of the change?

Fear

Lack of support

Prior changes

Communication

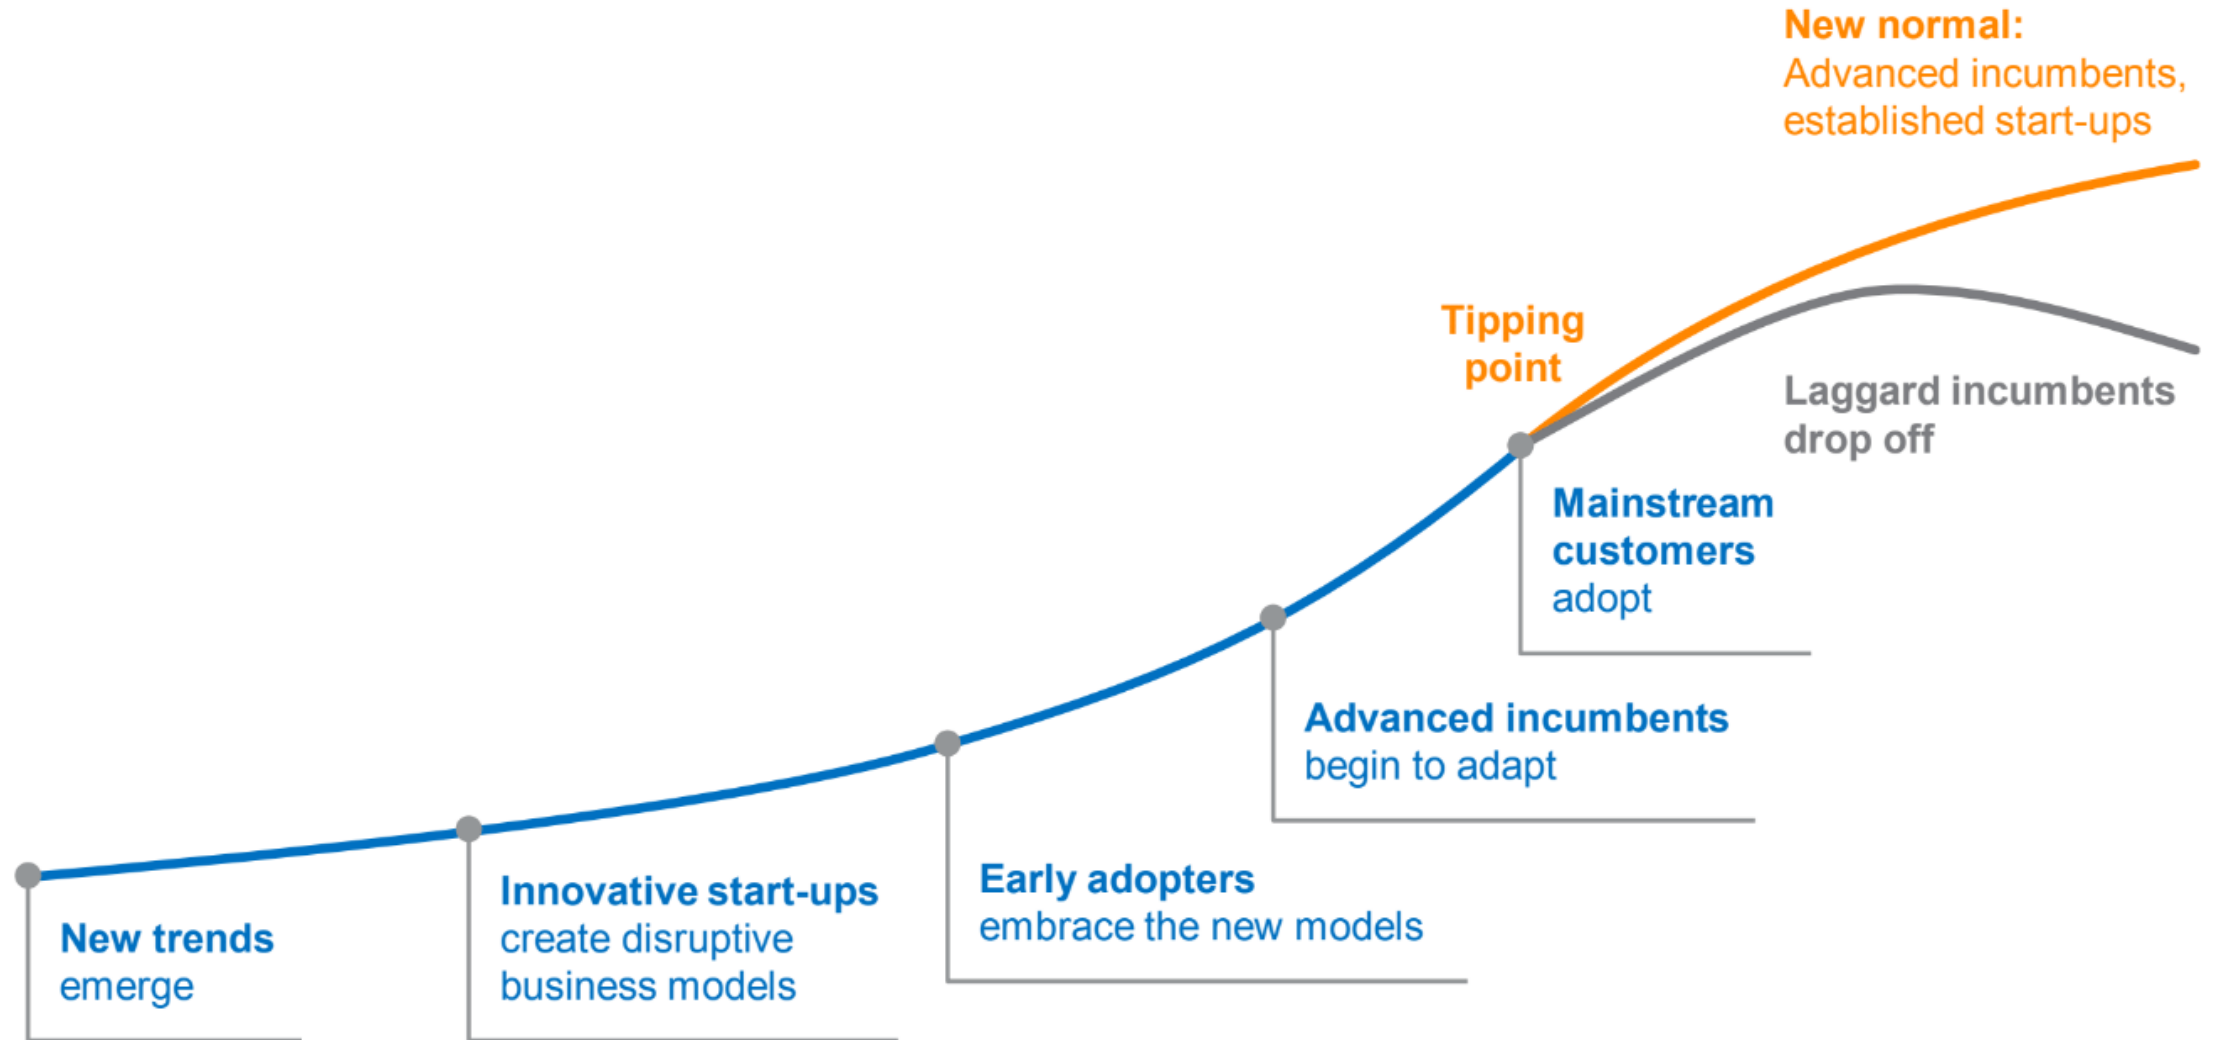

Disruptive nature of change

Manner in which change is introduced

Biases and emotions

Personal characteristics and background

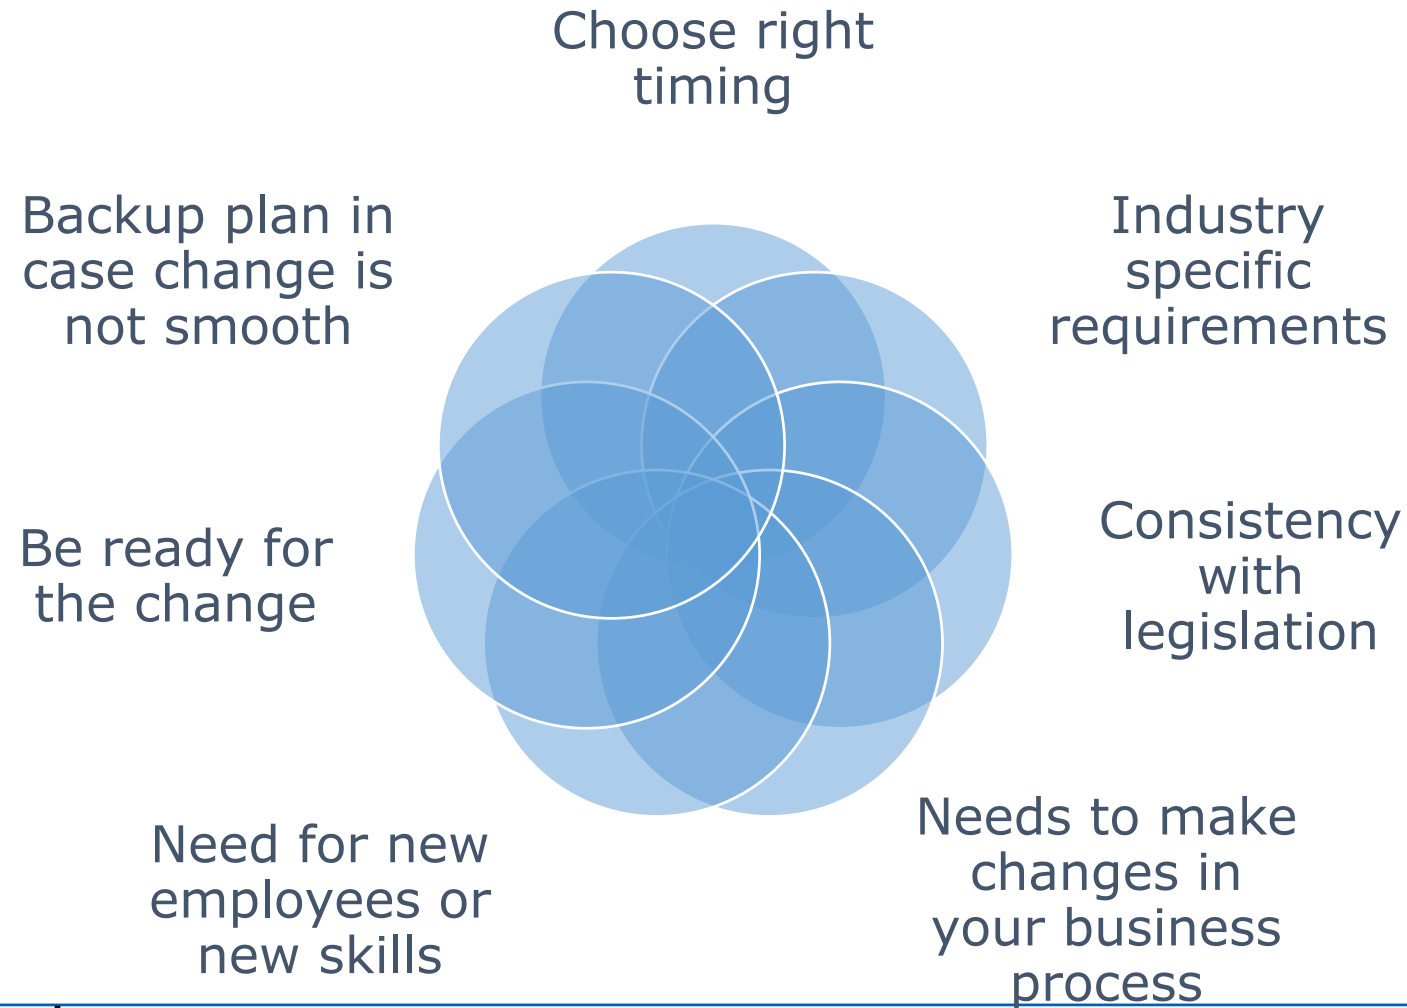

Digitization starts with pioneering firms, then spreads to entire industries

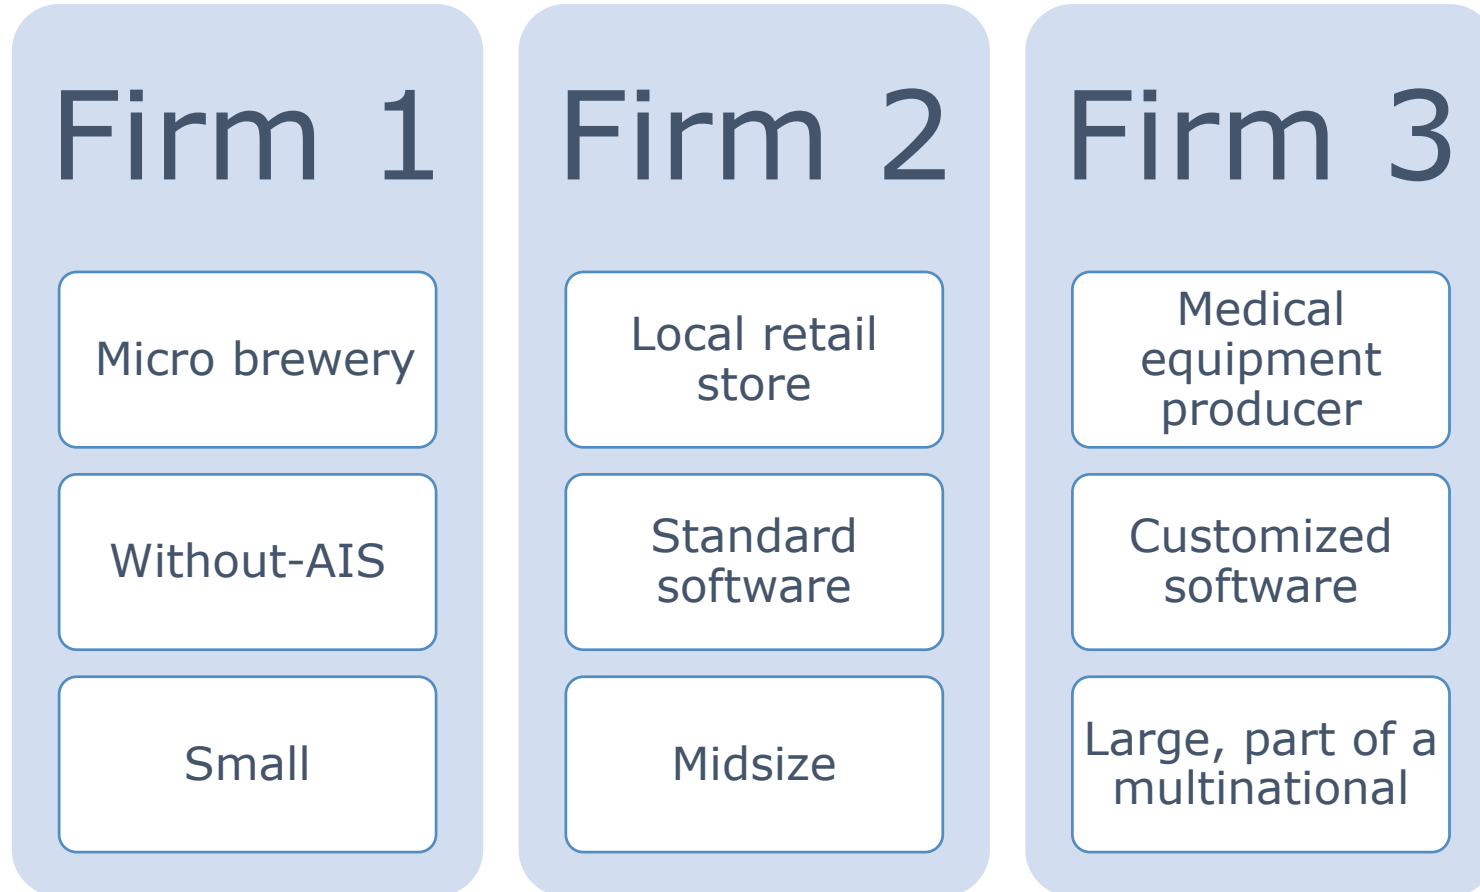

Backup plan in case change is not smooth

Before making the decision check list

II. Develop or buy AIS?

How to choose AIS?

Requirements AIS should satisfy

Usefulness

Timeliness

Flexibility

Economy

Customer service

Tractability

Reliability

Capacity

Auditability

Availability

Ease of use

Security

Learning materials

Trainings

Documentation

Online forums

Integration with other systems

Taxation,

Internet banking

B2B, B2C portals

Logistics

CRM

Payment models

Per user

Per transaction

Per module

For updates and services

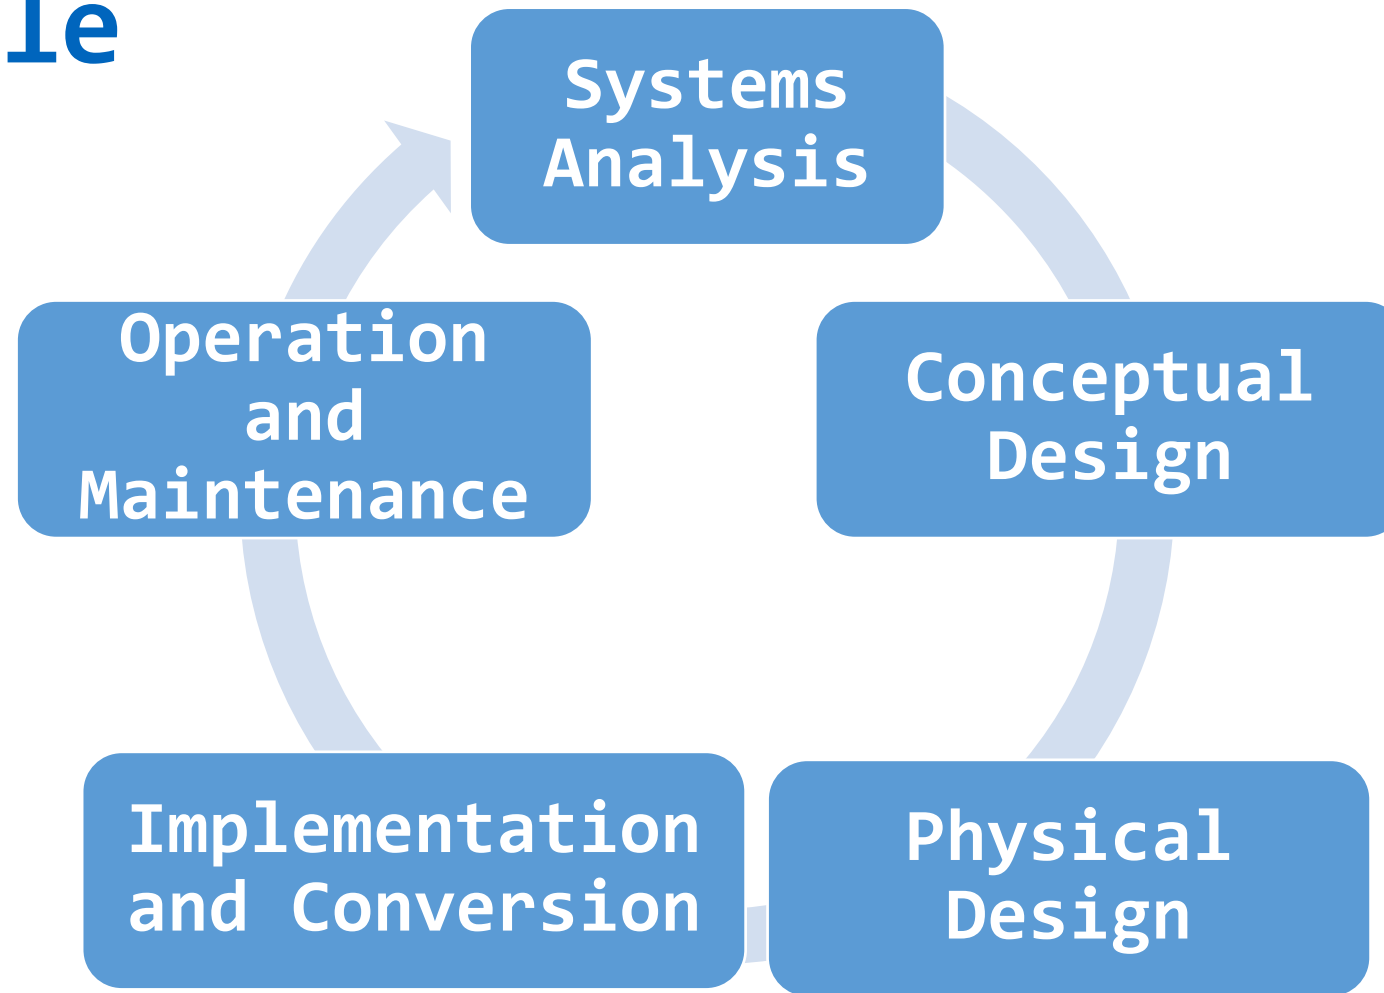

The background of the slide features a repeating pattern of interlocking gears in a light gray color. The gears are arranged in a grid-like fashion, creating a complex, mechanical texture. A solid gray horizontal band runs across the middle of the slide, containing the text.

To buy or to develop AIS?

II.i. In-House Information Systems

5 key elements of system development life cycle

Feasibility analysis

- ✓ **Economic**: Will system benefits justify the **time, money, and resources** required to implement it?
- ✓ **Technical**: Can the system be developed and implemented using **existing technology**?
- ✓ **Legal**: Does the system comply with all applicable **laws**, administrative agency **regulations**, and contractual obligations?
- ✓ **Scheduling**: Can the system be developed and implemented in the **time allotted**?
- ✓ **Operational**: Does the organization have **access to people** who can design, implement, and operate the proposed system? Will people use the system?

Communication Problems

As proposed by
user management

As sold to
top management

As planned by project
development team

As approved by
the steering committee

As designed by
the senior analyst

As written by
the applications programmers

As installed at
the user's site

What the users
actually needed

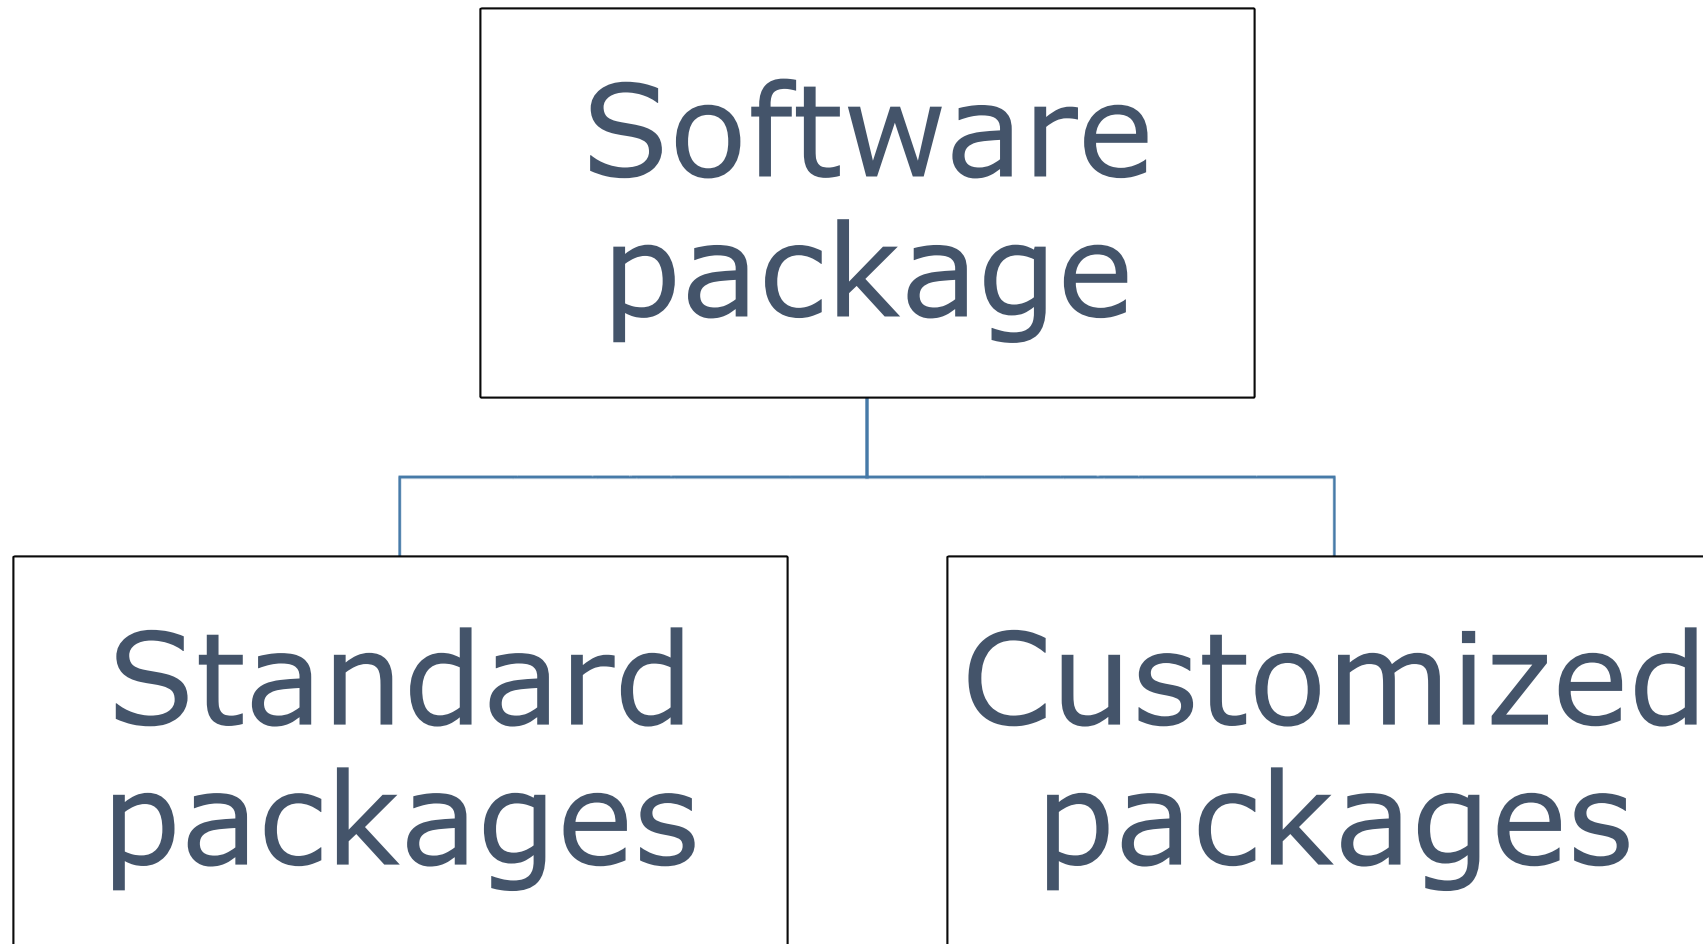

II.ii. Purchasing software packages

Software Evaluation 1/2

- ✓ Does the software meet all **mandatory and desirable specifications**?
- ✓ Will program **modifications** be required to meet company needs?
- ✓ Does the software have adequate **control capabilities**?
- ✓ Is the **performance** (speed, accuracy, reliability) adequate?
- ✓ How many companies use the software? Are they **satisfied**?
- ✓ Is **documentation** adequate?

Software Evaluation 2/2

- ✓ Is the software compatible with **existing software**?
- ✓ Was the software **demonstration/test-drive** adequate?
- ✓ Does the software have an adequate **warranty**?
- ✓ Is the software flexible, easily maintained, and **user-friendly**?
- ✓ Is **online inquiry** of files and records possible?
- ✓ Will the vendor keep the package **up to date**?

Vendor Evaluation 1/2

- ✓ **How long** has the vendor been in business?
- ✓ Is the vendor **financially stable and secure**?
- ✓ How **experienced** is the vendor with the hardware and software?
- ✓ Does the vendor stand behind its products?
- ✓ How good is its **warranty**?
- ✓ Does the vendor **regularly update** its products?
- ✓ Will the vendor put promises in a **contract**?

Vendor Evaluation 2/2

- ✓ Will the vendor supply a list of **customer references**?
- ✓ Does the vendor have a **reputation** for reliability and dependability?
- ✓ Does the vendor provide timely **support** and **maintenance**?
- ✓ Does the vendor provide **implementation** and **installation** support?
- ✓ Does the vendor have high-quality, responsive, and experienced **personnel**?
- ✓ Does the vendor provide **training**?

III. Maintenance

Maintenance
