

AUTOMATED FRYING PAN

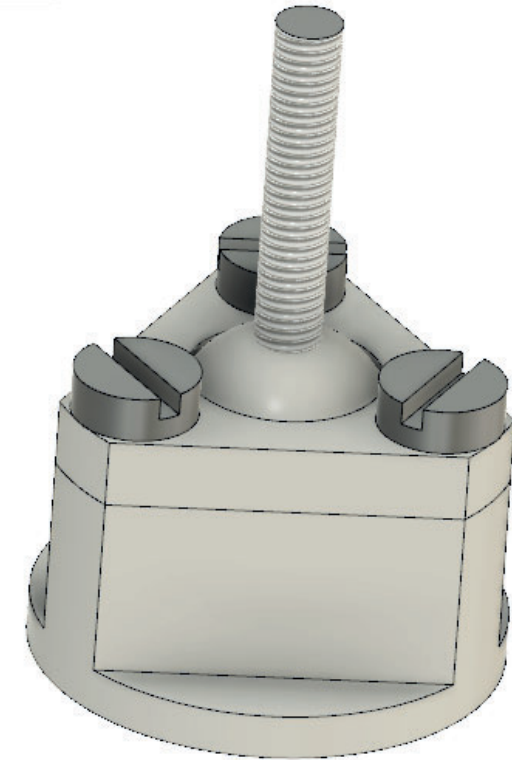

Our automated frying pan will free your hands in the kitchen. It can be connected to any smart phone with AFP app, where you can set the right frying program, or make your own.

This product is available in three different sizes, so it can be used in commercial kitchens as well as domestic kitchens. By using AFP you save time on a daily basis or make your business more efficient.

AFP has a pan on a Stewart-Gough platform, which enables all necessary frying movement. Six telescope sticks with ball joints in the ends create six degrees of freedom to the frying pan.

Model of the 3D printed ball joint.
