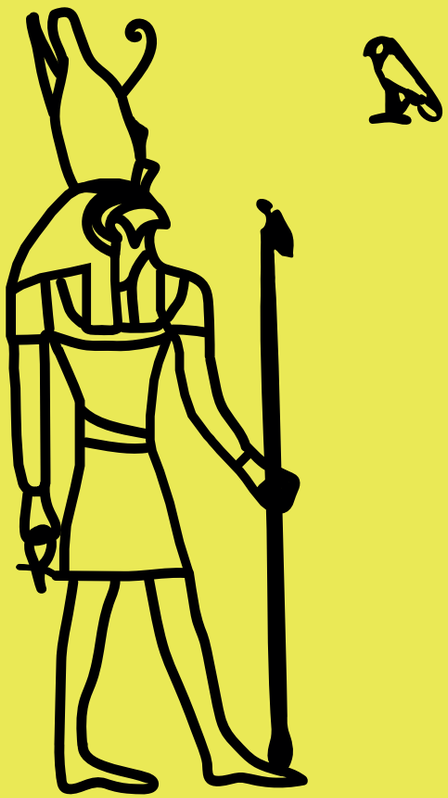
Horus

Horus is the ancient Egyptian god of the sky and is one of the most revered dieties in the Egyptian pantheon. His eye was used for protection agains evil and as he moved across the sky, the sun and the moon moved along with him.



As Horus moves across the scy our project follows his path forom east to west and as such our project can also be used to protect against the scorching rays of the sun or the cold pouring rain coming from Horus' domain.

Our first prototype in it's possible usecase

May Horus protect you!

We decided on the theme of ancient Egypt after looking for solar dieties. As we settled on Horus we found this yellow cloth which was just perfect for our project one could say that Horus was guiding us in the right direction
