

THE SHADE

CHALLENGE FACED BY EVENTS

For a long time people have suffered from the heat in events such as festivals and conventions. We decided to make a solution for this problem that we have faced for many years.

The Shade is a collaboration of engineering and design, collaborating those two to make the best sunshade for these kind of events.

THE FUTURE OF MASS EVENTS

We began our project with a lot of people from different backgrounds. That made us think of different solutions and various styles to do this project. The beginning was difficult because we had our disagreements about how to make this thing work, but eventually we found a proper solution.
