

Satellite antenna

- Why this Satellite antenna:
- It strengthens your satellite connection in places with poor coverage of satellite signal.
 - It could be placed at any ground.
 - It can be connected on any device
 - It is easy to carry on
 - It is made from lightweight material
 - It can be assembled and disassembled easily

The product can be attached also to backpack. Backpack attachment could be useful when you are trekking and you need to strengthen your satellite connection on the go or while camping.

Picture of traveling mode.

Picture of camping mode.

Our prototype has only one SGP-layer but antenna could have more layers so its turning scale could be wider in every direction. It could be attached for example to wall and then directed to the way signal is strongest.
