

Flower Power

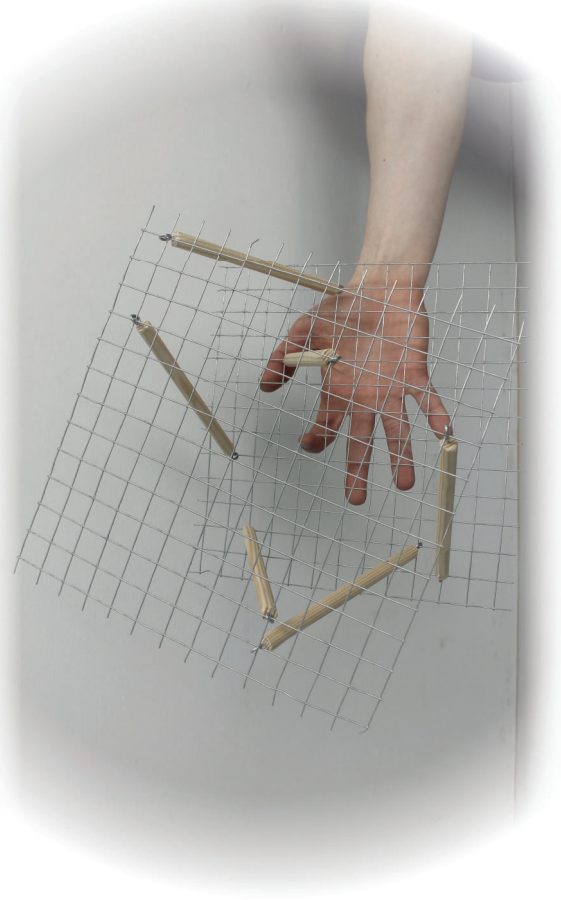

Flop

The Stewart-Gough
Platform (SGP) is a way
to connect two objects
with spherical hinges in
a stable way.

Utilising the SGP, our
goal was to create
something useful, and
beautiful.

Flower Power is a plant watering device.

The water is poured by tilting the device using two hydraulic legs.

The next step in the development is to make the device automatic and connectable to i.e. a phone to keep your plants alive even when you're not around.

Other possible future members of the product family:

- flour pouring device
- sauna pail
- champagne dozer
