

# Homework Assignment 7

Homework assignment for the 4th support appointment, 19.7.

1. As a team, build 2 different prototypes of your product. Both prototypes should demonstrate a slightly different approach to the idea, or explore two different features. If possible, use interview findings from previous assignment to help you decide which features to prototype. For example: big/small, meant for 2 different user groups, different materials etc. Bring your prototypes to class 19.7.
2. Together as a team, decide on a series of interview question that will help you get the information you need to drive your product idea to the next level. This resource (<https://www.usertesting.com/blog/prototype-testing-questions/>) has some helpful suggestions for prototype testing interview questions, but you can also make your own.
3. Individually, each team member conducts a short prototype testing interview using one of the prototypes as a communication tool. Try to find interviewees that fit the potential user profile. After the interview, fill out a Hot Report of your findings and bring it with you 19.7.

Please note that if you print in TurkuAmk, you need to reserve time (at least 3 days beforehand) from Antti Nousiainen. 040-8216876 [antti.nousiainen@koneteknologiakeskus.fi](mailto:antti.nousiainen@koneteknologiakeskus.fi). He is available only during July.

You can print also in service byros with budget up to 500 € If you do this, please contact your tutor.
