

Alive Dead Media

Pixel graphics

Tero Heikkinen 22.5.2019

- 1980s 8-bit and 16-bit home computer graphics
- Pixel Art today
- Case Sinclair ZX Spectrum:
 - Limitations
 - Full screen images
 - Game graphics (tile graphics)
- *Multipaint* and Wednesday/Thursday tasks

Amstrad CPC 6128

Commodore 64

ZX Spectrum

MSX
(Toshiba HX-10)

8-bit home computer graphics

Late 1970s to late 1980s

- Popular models: Commodore 64, Sinclair ZX Spectrum, Amstrad CPC, MSX, Nintendo Entertainment System, Sega Master System
- Tiny memory (64 Kilobytes = 65536 bytes)
- Low resolution (160 x 200, 256 x 192, 320 x 200)
- Limited, fixed palettes (8-16 colours)
- Colour resolution usually less than pixel resolution
- Hardware “sprites” important for games

Bug-Byte: *Manic Miner*, ZX Spectrum, 1983, 256 x 192 bitmap

Ocean: *Rambo*, Commodore 64, 1985, 160 x 200 character mode

SPRITE x 2

TILE?

4 x 8 character display and overlaid 24 x 21 pixel "sprites"

Rainbow Arts: *Great Giana Sisters*, Commodore 64, 1987

16-bit home computer graphics

Mid-1980s to Mid-1990s

- Popular models: Commodore Amiga, Atari ST, Super Nintendo, Sega Megadrive
- More memory (512-1024 Kilobytes and more)
- More resolutions (320 x 200, 640 x 200, 640 x 400) and overscan modes
- Flexible use of video memory, 320 x 200 with 16 colours
- Adjustable palettes (e.g. 16 colours out of 4096)
- Bitplane graphics, consoles rely more on sprites
- TVs are still used

“bitmap/bitplane”

- 1 bit = 1 pixel, 8 bits = byte = 8 pixels

00111100 = 60

01000010 = 66

10100101 = 165

10000001 = 129

10111101 = 189

10000001 = 129

01000010 = 66

00111100 = 60

- Multiple bitplanes= more colors (2 planes=4, 3=8, 4=16)

Atari ST

Commodore
Amiga 500+
(motherboard)

Cinemaware: *Defender of the Crown*, 1986

FTL: *Dungeon Master*, 1987

Bitmap Brothers: *The Chaos Engine*, Amiga, 1993

Bitmap Brothers: *The Chaos Engine*, Amiga, 1993

Traveller's Tales: *Leander*, Amiga, 1991

DPaint

Color

Deluxe Paint (Amiga, 1985)

- Used by both professionals and hobbyists
- *The definitive* pixeling program for the 16-bit computer era (In Europe and US)
- Combination of mouse and keyboard shortcuts, fast brushes
- Single images, tile graphics and sprite sheets
- Predecessors: *Superpaint* (Xerox Parc, 1970s), *Quantel Paintbox* (Quantel, 1981)

Pixel Art Now

- Hobbyist and demoscene graphics on original platforms (Commodore 64, Commodore Amiga and ZX Spectrum are popular)
- Also as a graphical style separated from the original platform limitations, used in many current indie games
 - Super Nintendo and PC VGA graphics seem to be common references

Free Lives/Devolver Digital: *Broforce*, PC/Mac/Linux, 2015

Super Brothers/Capybara Games: *Sword & Sworcery EP*, PC/Mac/Linux, 2011

Terrible Toybox: *Thimbleweed Park*, PC/Mac/Linux, 2017

Case: Sinclair ZX Spectrum

- Introduced in 1982
- 16K and 48K models, later 128K model
- Z80 Processor at 3.5MHz
- Typical storage medium: Cassette tapes
- 256 x 192 pixel resolution, 32 x 24 colour resolution
- “1-bit RGB”, 8 colours, two brightnesses (except black)

Case: Sinclair ZX Spectrum

- 256 x 192 pixel resolution, 32 x 24 colour resolution
- “1-bit RGB”, 8 colours, two brightnesses (except black)
- Two colours can exist on a single 8x8 pixel area
- These colours must be of the same brightness = the two different brightnesses cannot be combined
- Border colour

ZX Spectrum Colours:
8 colors,
Two brightness
Levels

Ø OK, 60:1

CREATE ELECTRONIC ART ON YOUR OWN TV SCREEN WITH THE SPECTRUM DOODLER!

Carrods Graphic Design, Cambridge

Software designed in conjunction
with Sinclair Research

**Draw straight on to
your screen!**

The Spectrum Doodler is a lightpen that enables you to draw straight on to your own tv or

textures, repeat stock patterns or make your own design using a special layout grid. Draw free hand – point to point or continuous line ribboning. There is also the facility to add text to your design.

**Store your work on
cassette or microdrive!**

Robustly made, fun to use!

The lightpen is robust and comes complete with software on cassette which can be duplicated on to microdrive cassette. There is an instruction manual that's simple and easy to understand and an interface box for connection to your Spectrum computer. You can even write your own software for the Doodler if you wish.

To get your own Spectrum

ZX Spectrum full screen images

- 256 x 192 pixels, with 32 x 24 colour grid
- “1-bit RGB” = 8 colours in two brightnesses (except black)
- Then: Loading Screens, Title screens
- Now: Hobbyist images, Demoscene graphics, New Games

Unknown/Ultimate: *PSSST*, loading screen, 1983

F.D.Thorpe/Ocean: *Head over Heels*, loading screen, 1987

MAC: *Crystal Kingdom Dizzy*, remade loading screen, 2017

Piesiu: *Cursed Eighth*, 1st position at the Chaos Constructions 2010 party, Russia

diver/4d : *Mercenary 4. The Heaven's Devil*, 1st position at the Forever 2014 party, Slovakia

ZX Spectrum game graphics

- 256 x 192 pixels, with 32 x 24 colour grid
- “1-bit RGB” = 8 colours in two brightnesses (except black)
- No hardware sprites – every *change* needs to be done with the processor
- “Colour Clash”
- Black is often the easy background colour, as it “mediates” the two brightnesses

Raffaele Cecco/Hewson: *Exolon*, 1987

THE LORD OF DAUN

He stands at a keep in
the Domain of GRAG,
Looking North to the
Downs of GRAG.

Julian Gollop/Target Games: *Laser Squad*, 1988

Ultimate: *Knight Lore*, 1984

Don Priestley/DK'Tronics: *Popeye*, 1985
